

Welcome!

Crowchild Trail Upgrades Information Session

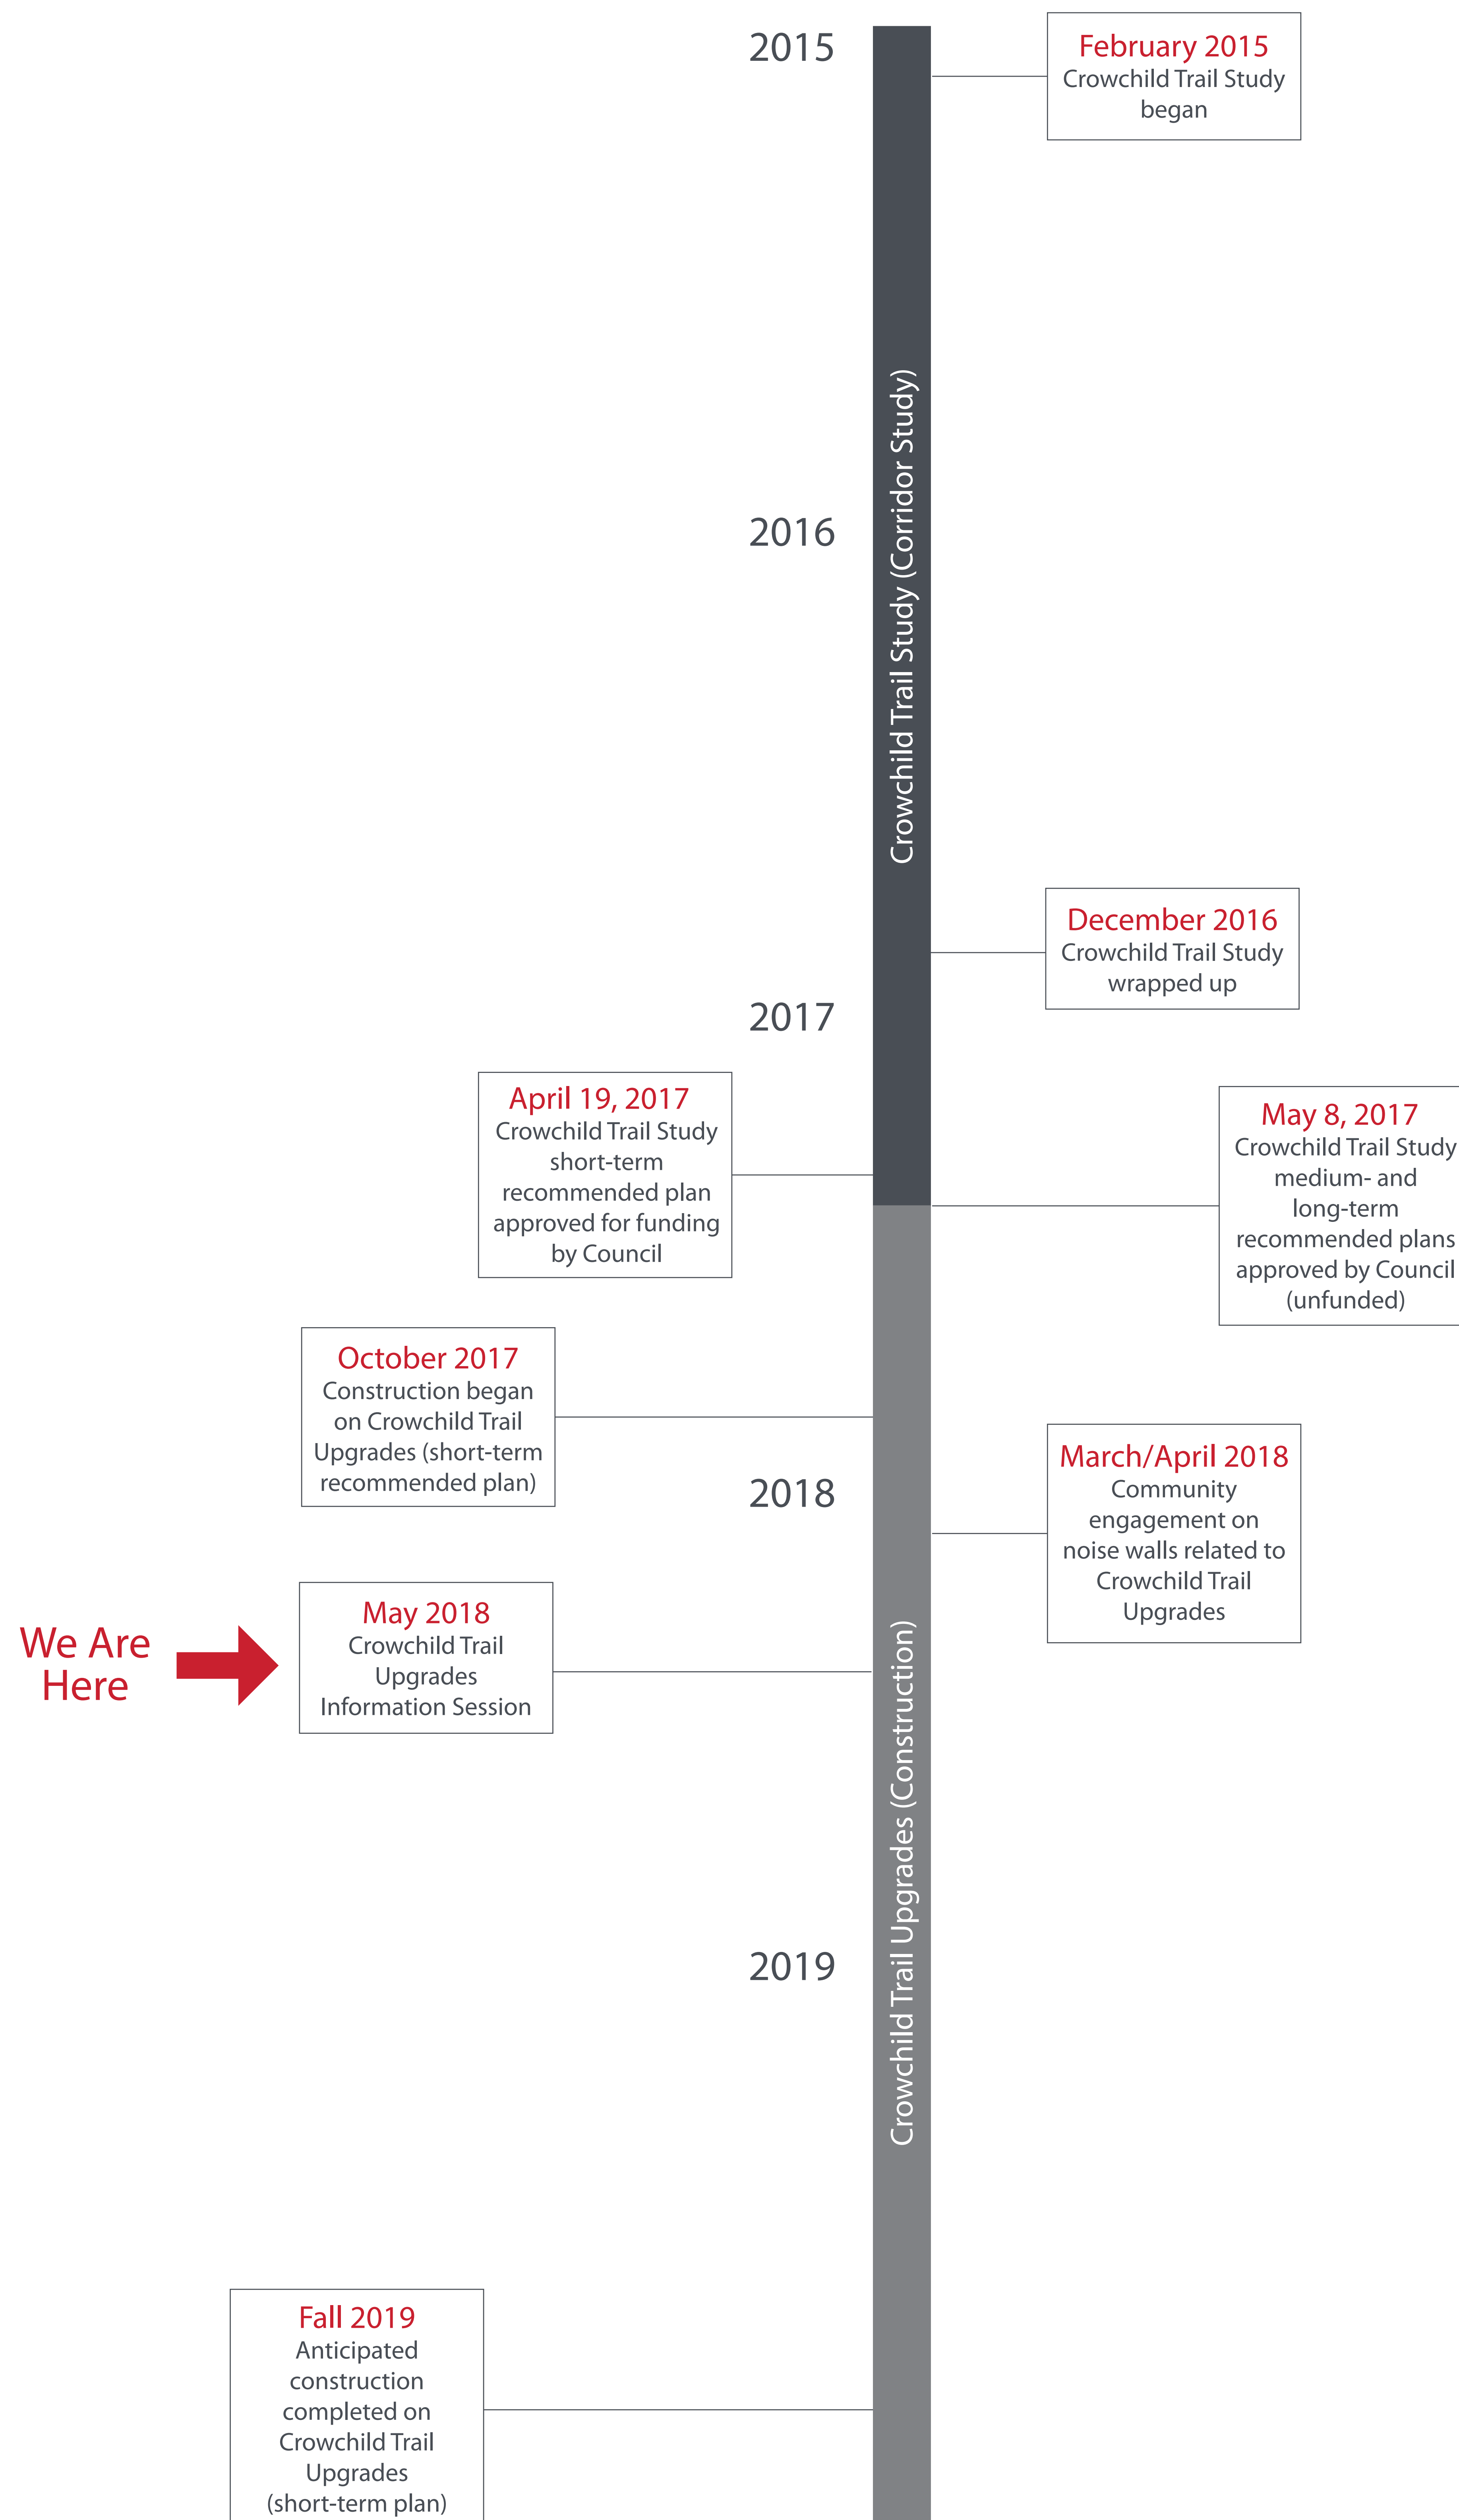

During this session you will:

- View the construction work that has been completed so far and what's happening in 2018.
- Review what we heard during noise wall engagement (March/April 2018) and the approved wall locations, textures, colours, and landscaping.
- Provide feedback on the finishing touches (i.e. wall accents and associated landscaping) of the noise walls.
- View the related projects that are occurring in the area.

Timeline

The Crowchild Trail Upgrades project is a result of the short-term recommendations that came from the Crowchild Trail Study. Construction is taking place now through to Fall 2019.

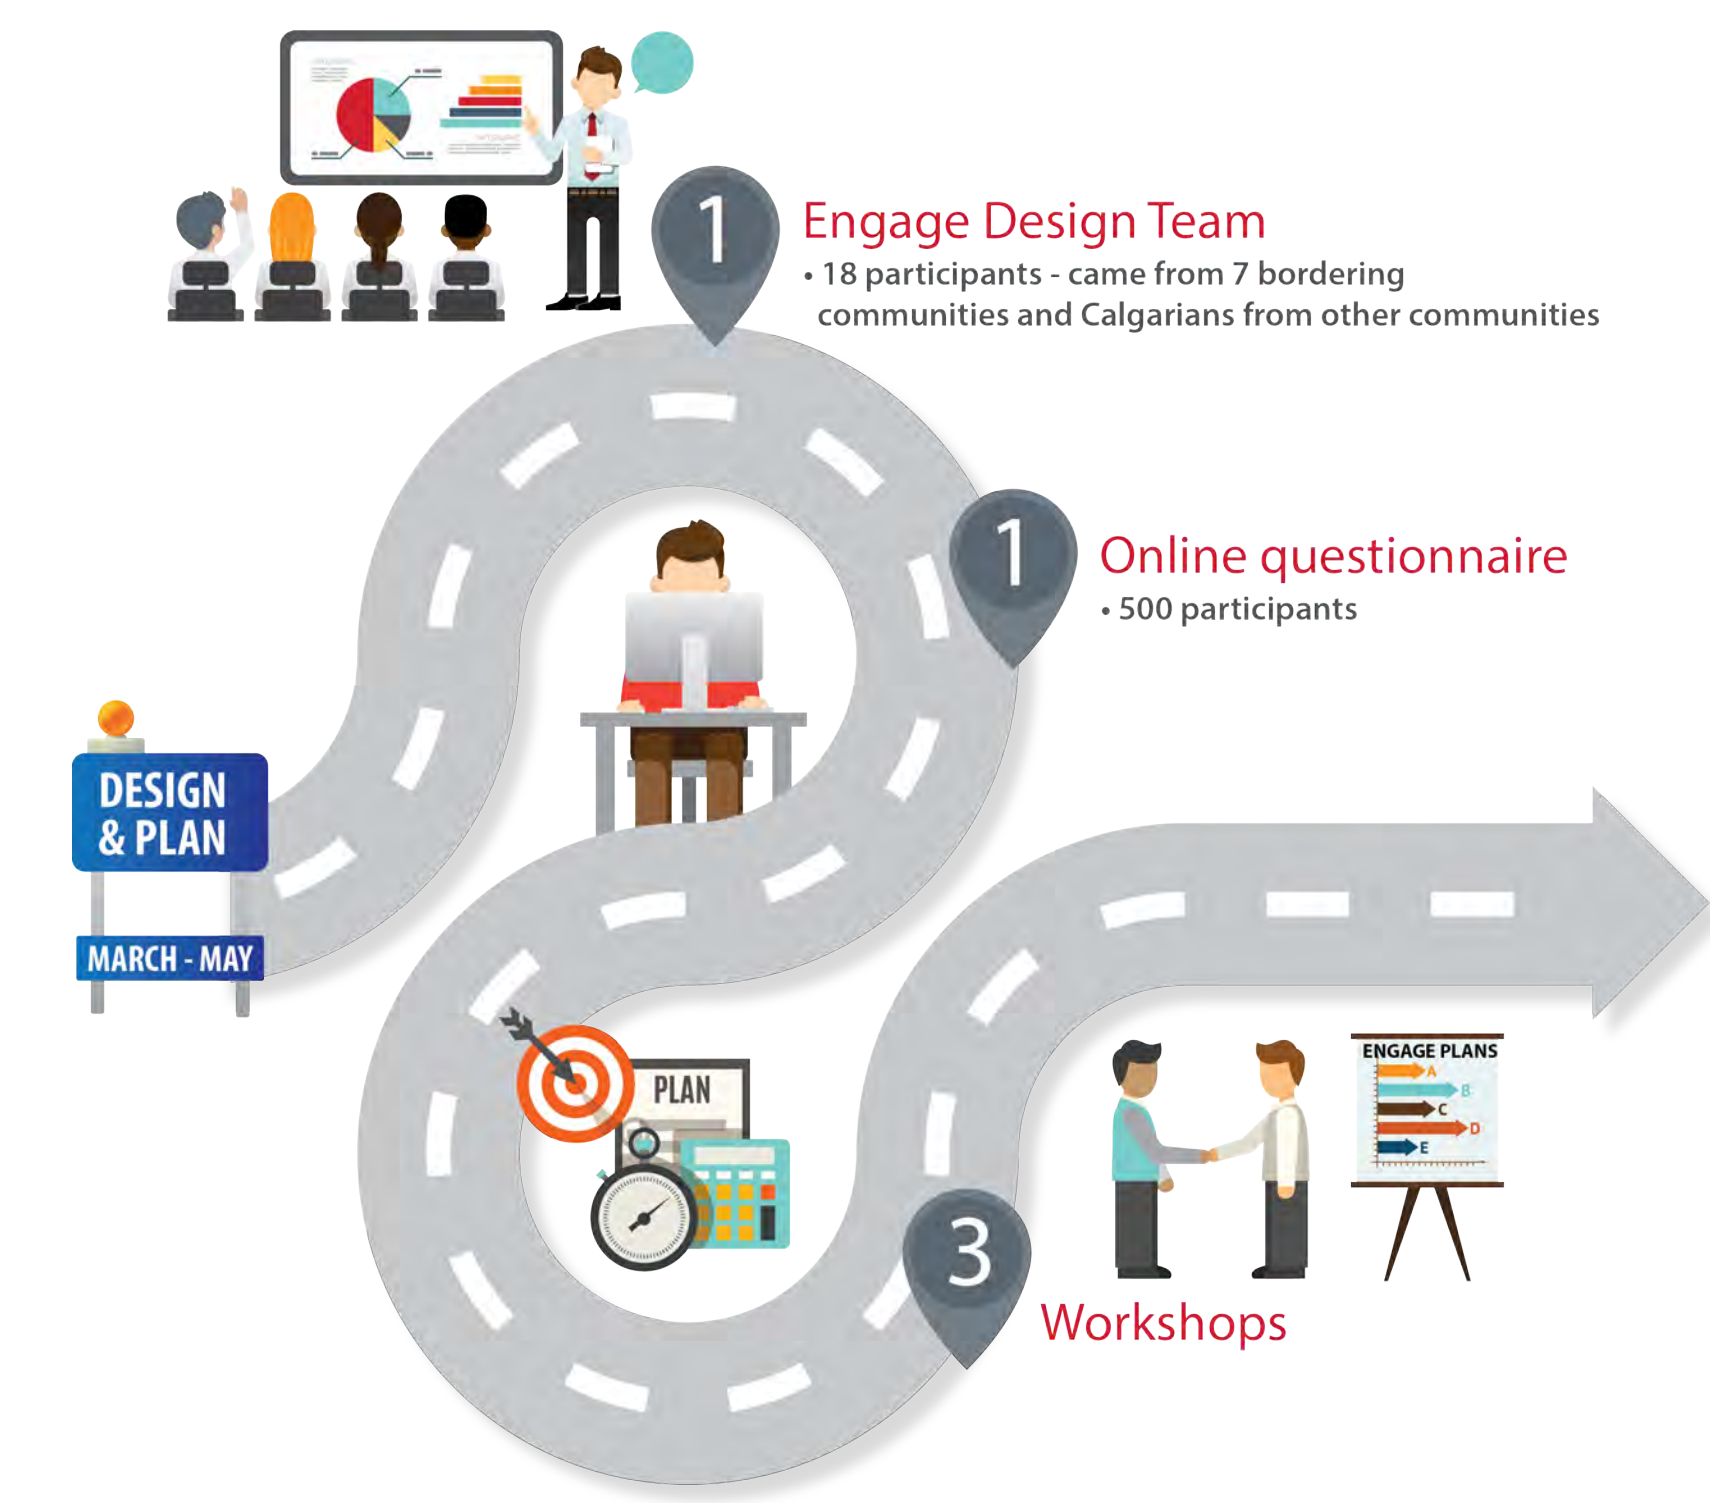

Crowchild Trail Study - Engagement Process

From Feb. 2015 to Dec. 2016, we worked with thousands of Calgarians to identify short-, medium-, and long-term changes and upgrades to address current issues and challenges along Crowchild Trail from 24 Avenue N.W. to 17 Avenue S.W.

The Crowchild Trail Study was a transportation corridor study with a six-phase process that provided a variety of engagement opportunities for Calgarians to participate in each phase of the study.

Phase 1: Engagement Plan

Phase 1 was about determining how to engage communities and Calgarians throughout all phases of the Crowchild Trail Study.

Phase 2: Confirm Project Goals

Phase 2 was about understanding what's important to stakeholders when thinking about maintaining and enhancing bordering communities, and improving travel along and across the Crowchild Trail corridor. We asked participants to share their ideas and concerns, then turned that information into project goals.

Phase 3: Concept Identification

Phase 3 was about identifying and evaluating ideas on possible changes to Crowchild Trail. We asked Calgarians to share their ideas for improvements. From those ideas we came up with 17 groups of ideas which Calgarians helped evaluate in order to identify which ideas would be used to build preliminary concepts.

Phase 4: Concept Evaluation

Phase 4 was about evaluating 7 preliminary concepts for Crowchild Trail. Participants were asked to rate how well each concept met the 11 project goals that were developed based on public input in Phase 2.

Phase 5: Draft Recommendations

Phase 5 was about presenting the draft recommended short-, medium- and long-term plans for evaluation. Participants were asked to identify strengths and weaknesses of the plans in order to help the project team refine and finalize them.

Phase 6: Final Recommendations

Phase 6 was about presenting the final short-, medium- and long-term recommendations for Crowchild Trail. We asked Calgarians to provide feedback on the engagement process to capture lessons learned and improve future transportation studies.

Thank you for attending today's session!

Next steps

The project team will finalize the finishing touches (i.e. wall accents and associated landscaping) of the noise walls and start preparing for construction of the noise walls south of the river.
