## **Macleod Trail / 162 Avenue S Interchange Macleod Trail / 194 Avenue S – West Connection**

The City of Calgary has retained ISL Engineering and AECOM to complete updated planning for an interchange at **Macleod Trail / 162 Avenue S**. Information sessions in October 2014 and February 2015 provided information and progress reports on the project, and gathered input from stakeholders and the public to help evaluate options for the interchange.

ISL is also completing updated plans for a west connection at **Macleod Trail / 194 Avenue S**. An initial information session in February 2015 provided background information, reviewed options under consideration, and sought input from stakeholders and the public to inform finalization of the plan.

The purpose of this pair of drop-in information sessions is to provide:

- Study recommendations as well as information about timing and plans for construction of the **Macleod Trail / 162 Avenue S Interchange** including:
  - Selection of the DDI configuration for the interchange
  - Operational improvements for the Shawville Blvd / 162 Avenue intersection
  - City decision to begin design and construction of the interchange in 2015
  - Right-in access to Shawville Blvd South
- A progress report on plans for the **Macleod Trail / 194 Ave S – West Connection**

Members of the project team are available to answer questions and to receive feedback.
