

Highlights:

- In April headline inflation in Calgary rose to 1.69 per cent from 1.63 per cent a year ago and increased by 0.68 per cent year to date based on a twelve-month moving average.
- Rising crude oil prices due to higher geopolitical risks, lower inventories and stronger global demand have contributed to rising inflation, along with a recovering labour market. However, the change in mortgage rules introduced by the Bank of Canada in January of 2018 has decreased the number of real estate sales across Canada. In some regions, this has caused housing inventory to rise, lowering some housing prices and rents. In Calgary, the impact has been limited to slowing the number of sales while not adding pressure on prices other than rent, which continues to soften.
- Headline inflation in Alberta increased to 1.59 per cent year over year and rose by 0.68 per cent year to date, while Canada saw an increase of 1.68 per cent year over year and an increase of 0.70 per cent year to date on a twelve-month moving average.
