

# **Connect:** Calgary's Parks Plan

## Land Acknowledgement

We would like to take this opportunity to acknowledge Calgary is located within the inherent and cultural landscapes and ancestral lands of the Siksikaitsitapi comprising of the Kainai, Siksika, Piikani and Amskaapipiikani Nations and the historical lands of the Îethka Nakoda Wîcastabi, comprising of the Chiniki, Bearspaw and Goodstoney Nations and the Tsuut'ina of the Great Dene Nation. These lands are also home to the Métis Nation in Alberta, Battle River Territory. We acknowledge all First Nations, Inuit and Métis people who have made Calgary their home.

These Nations have a rich history on these lands, and we feel very connected to that history as we work to care for the traditional lands within the park system. At The City of Calgary, we consider ourselves stewards of these spaces today, but we need to acknowledge the original stewards of this land and their lives that were inseparably tied to the landscape.

It is with great humility that we, as employees of The City of Calgary, have the distinct responsibility to uphold a high level of care for these traditional lands. And as a result, The City has the utmost respect for the elders of these nations — those from the past, the present and those that are emerging.

We also acknowledge all First Nation, Métis and Inuit people who call Calgary home, whether they are from these nations or elsewhere on the earth. Our World is broken and building relations with Indigenous peoples is a big step on the long journey to its healing. Thank you to all Indigenous peoples — the elected officials, the elders and all members of these great nations for their traditional caretaking of these lands that we are all now proud to call home.

## Chapter 1 Background and Connections

## **1.1 Introduction**

*Connect: Calgary's Parks Plan* (hereafter referred to as 'Connect') has been developed to respond to the significant growth and demographic changes that have occurred in Calgary over the past two decades. 'Connection' is a common theme in the way that park spaces impact the lives of Calgarians; they connect us to each other, to our communities, to ourselves, to wellness, to our history and to the natural environment. They connect us to the landscape that lies at the heart of what makes Calgary unique.

Much has changed in the 22 years since the implementation of the *Open Space Plan*, and the time has come to modernize Calgary's approach to park planning. It is critical that planning, design and management of the **park system** will continue to respond to the diverse needs of Calgarians. The intent of Connect is to ensure the **park system** serves the social, recreational and environmental needs of Calgarians in a manner that ensures those spaces resilient, **accessible** and inclusive.

## **1.2 Importance of the Park System**

#### **Spaces for People**

Currently, our city has over 2,900 parks which provide Calgarians with a wide variety of experiences and opportunities. Parks are spaces for people of all backgrounds and abilities to meaningfully enjoy and connect with **nature**, wellness, culture and each other. They are places where Calgarians can be physically active through organized sports, learn to ride a bike, hit a game-winning home run, go for a morning walk, wheel or roll or watch the birds, all while enjoying Calgary's beautiful landscapes. They are spaces for relaxation, celebration, play, sport, gathering and learning. They provide high-quality opportunities for children to build skills and strengths that contribute to full and rewarding lives. Access to and time spent in parks has been shown to improve health outcomes such as reducing the symptoms of stress, anxiety and depression, supporting physical and mental health.

Parks are also places where Calgarians can meaningfully engage with each other and the landscape. They are spaces to contemplate and learn about history and where cultures can intersect. Some are sacred spaces for Indigenous Nations and people that highlight an evolving relationship with the natural world and our cultural history. They are places for social and community gatherings that connect Calgarians from a variety of backgrounds, fostering a sense of pride and belonging in the city.

#### **Spaces for Nature**

Today, Calgary has over 200 **natural areas** within the **park system**, including the prominent spaces of Nose Hill, Twelve Mile Coulee, Griffith Woods, Weaselhead and Beaver Dam Flats. These areas, and others like them throughout Calgary, play a crucial role in keeping our city healthy by supporting **biodiversity**, protecting thriving natural ecosystems and contributing to a climate-resilient city. Natural areas have the inherent capability to efficiently capture stormwater, remove pollutants from our waterbodies, sequester carbon to reduce Calgary's greenhouse gas footprint and reduce the impacts of excessive heat, flooding and drought conditions.

In addition to their environmental benefits, **natural areas** support the health and wellbeing of Calgarians by facilitating access to **nature**, which provide physical and mental health benefits, reduce stress and increase overall happiness.

Finally, natural area are places where Calgarians can discover, experience and interact with nature which, in turn, helps to foster environmental advocacy and stewardship. It is important that we plan and manage these special places so that they remain ecologically healthy and continue to offer benefits to residents and wildlife alike. This means access to and activities within these areas should be carefully managed, to preserve **nature** now and for the future.

#### **The Park System**

The **park system** is a critical component of a thriving, attractive city that supports healthy urban living. The system plays an important role in mitigating growing climate instability, protecting Calgarians by providing shady relief from extreme heat events and absorbing storm and flood waters. The system supports economic development by providing space for tourism, events, community gatherings and celebrations. While often overlooked as key **infrastructure**, parks are as integral as roads and utilities in providing connections between urban communities, as well as contributing to residents' well-being.

Calgary continues to grow and is projected to become a city of two million people within the next two decades. Projected population expansion and increased urban density will result in increased usage and reliance on an already much-loved **park system**. The **park system** needs to be expanded and improved in thoughtful ways, to meet the future needs of all residents, regardless of their age, ability, income, culture or background.

APPENDIX A

ronment

GLOSSARY

## **1.3 What Informed Connect**

Connect has been developed using multiple inputs. Through an extensive and in-depth engagement and research program. Calgarians provided guidance to inform the development of Connect by identifying what they valued, what is working and what can be improved in the city's **park system**. The plan also needed to respond to legislative and policy changes at both the municipal and provincial levels and changes to best practices in park planning using a network-based approach focusing on interconnected multifunctional spaces.

#### Engagement

In order to develop a plan that resonated with all Calgarians, a concerted effort was made to reach Calgarians of all walks of life, including those traditionally overlooked or excluded.

Equity-deserving Calgarians (including: racialized groups, Indigenous people, English language learners, persons with disabilities, seniors, the 2SLGBTQ+ community, young adults, people living with low-incomes and unhoused individuals) experience increased **barriers** to accessing the city's **park system** yet they are often people who can benefit most from access to parks. Applying an **equity** lens to engagement required specific tactics which focused on working with leaders from representative community groups, attending school events to specifically connect with youth, providing in-person and online opportunities through various media avenues and in-person pop ups in parks.

Three distinct engagement phases were held in Spring 2023, Fall 2023 and Fall 2024. Engagement was specifically designed to offer a range of methods and tactics, both traditional and non-traditional, to reach as many individuals and interested groups as possible.

#### **Public Research**

Connect's development also included two statistically representative surveys to supplement and verify the feedback received from public engagement. Six focus groups were assembled to gain insight and a candid understanding of how well Connect's strategic directions were received. Research confirmed that the strategic and policy directions gathered during engagement accurately reflected Calgarian's sentiments. The research showed that the engagement feedback represented the broader community rather than just amplifying the voices of a vocal minority.

#### **Geospatial Analysis**

A new geographic information system (GIS) database was developed in tandem with Connect, to provide a complete and up-to-date status of the **park system** through spatial analysis. This was done to analyze quantity and access metrics city-wide and help inform policy direction and standards within Connect. Moving forward, this tool will allow for better informed development and management decisions regarding gaps in park planning, provision, connectivity or capital investment.

## **1.4 Park System Vision**

Connect implements the vision for the **park system** that was set out in *imagineParks*, The City's 30-year strategic plan for parks, approved by City Council in 2015.

#### Purpose

The purpose of Connect is to guide the planning, development and management decisions for the park system to achieve this vision over the next 20 years.

"Calgary's parks and open spaces are cherished places that connect us to nature, our heritage and one another."

## **1.5 Strategic Directions**

Connect presents the following ten strategic directions which capture what Calgarians value about their **park system**. Each of these directions supports the future improvement of the **park system** to create cherished places that connect us to **nature**, our heritage and one another.

## Conservation and Protection of the Environment

Improve, enhance and support **nature** conservation, wildlife protection and **biodiversity** by taking a **nature**-based approach, using the best practices of **ecological network** planning and placing the environment first in city building decisions.

#### **Climate Resilience**

Build a resilient city that can accommodate drought, flood, extreme heat and cold events to reduce negative impacts to property and Calgarians.

#### **Inclusive and Accessible**

Ensure that the **park system** meets the needs of all Calgarians through the provision of parks and **amenities** that address **barriers** to access and incorporate **barrier-free design**.

#### **Connectivity for People and** Wildlife

Strengthen connection to the **park system** by supporting different travel options for Calgarians. Ensure connectivity through **natural areas** to provide space for wildlife movement.

#### Physical and Mental Health and Wellbeing

Develop and manage parks that support physical and mental health and active lifestyles of Calgarians through public recreation and sports **amenities**, multi-use **passive recreation** amenities and access to nature opportunities.

#### **Support Communities**

Support the stewardship of the **park system** and provide communal spaces to foster neighbourhood gathering, events and a sense of connectedness.

#### **Cultural Landscapes**

Conserve and protect **cultural landscapes** (Indigenous, recent heritage, archaeological) and continue to build relationships and work together with Indigenous peoples to incorporate traditional and ancestral knowledge, management and places for ceremony in the **park system**.

#### **Safety and Security**

Reduce user conflicts in the **park system** through design, education and regulation; and partner with community service groups to address mental health and encampment issues.

#### **Economic Resilience**

Pursue financial **sustainability** and an **equitable** distribution of resources by providing a high-quality **park system** with **multifunctional** value and operational efficiency through a standard level of service maintenance.

#### Innovation

Promote forward looking practices and databased decision-making in park provision, design and management. Action

Challenges

## **1.6 Actions and Current Challenges**

The strategic directions define what Calgarians value and want the **park system** to achieve, how the **park system** can meet those strategic directions was captured through four clear actions to address improvements to the **park system**. These actions were developed in response to challenges identified through feedback from internal and public engagement, research, spatial analysis and best practice review.

## **Protect and Enhance**

Address protection of the environment, **biodiversity** and the tree **canopy**.

#### **Natural Area Protection**

- Encroachment into **natural areas** from development and activity is leading to challenges including isolating and damaging **habitat**, impacting **biodiversity** and stressing wildlife.
- Lack of awareness on appropriate uses within **natural areas** resulting in an imbalance between human use and **habitat** health.
- A healthy natural system is a priority for Calgarians, and connectivity of natural **habitats** is important to provide space for wildlife movement and is the foundation of **ecological network** planning. Gaps in connectivity in the **ecological network** need to be addressed.
- Greater protection of the environment needs to be provided during the development process to support **biodiversity**, **habitat** health and connectivity.

#### **Climate Resilience**

- The **urban forest** is an important climate tool to reduce heat, capture stormwater and filter air, but is difficult to grow and maintain in Calgary. Currently, only 30 per cent of the canopy is on public land, whereas 70 per cent is on private land. Significant investment in tree planting will be required by The City to reach a **canopy** target of 16 per cent by 2065.
- Competition for space between development, roads and utility right-of-ways, parks and other needs reduces the availability of lands for tree **canopy**.
- Smaller parks present challenges for stormwater capture as there is limited space to accommodate green stormwater infrastructure and provide for the recreational needs of users.
- Supporting and investing in naturalization is important for operational efficiency and **climate adaptation**. Our *BiodiverCity* outlines a target of restoring 20 per cent (832 hectares) of Calgary's open space by 2025. To date, just over half (53 per cent) this target has been reached primarily due to lack of dedicated funding for naturalization.
- As climate change hazards become more frequent and intense, **natural areas** are at risk of significant damage. Shifting seasons, drought and higher average temperatures threaten the health and well-being of vegetation and some parks **programming**. Park landscaping and design needs to plan for and incorporate adaptation measures to address these future challenges.

## Action 2

## **Connect and Grow**

Address provision of larger **multifunctional parks**, park development opportunities in underserved areas and increase connectivity.

#### **Provision and Access**

- Calgary has over 2,900 parks and 94 per cent of Calgarians live within 400 metres of a park, yet some Calgarians report that they do not have sufficient access to parks and there are not enough parks in their neighbourhoods.
- Parks that people are nearest to are not always the ones that they need or can use. These parks often have a single function such as a playground that only serve a small percentage of people within a limited age group.
- 40 per cent of parks in the **park system** are under 0.4 hectares. This is insufficient to provide an **amenity** mix that meets the needs of a diverse population in terms of multifunctionality.

#### Connectivity

- Calgarians value being able to recreate by moving in and between different areas of the **park system**. Connections to and between parks are sometimes missing or inconsistent.
- There is a lack of mobility options to support access to regional parks.
- Instead of supporting the movement and comfort of people, **linear parks** are often developed to support utilities and stormwater infrastructure.

## Action **3**

Challenges

## **Include and Support**

Address supporting communities with park spaces that are multi-generational, multiuse and **accessible** and help foster community cohesion.

#### Design

- Many common **amenities** within parks do not serve people of different ages, interests or abilities. There is not enough supporting **infrastructure** such as washrooms, drinking fountains and seating to provide comfort, dignity and places to rest.
- Some Calgarians cannot get to or participate in parks due to physical, mental and social **barriers**. Universal design and increased accessibility by different modes of travel, increased winter maintenance and accessible amenities is a key need to support year-round use and access regardless of race, age, gender or ability.
- People want parks to support a sense of place and belonging. Calgarians
  expressed there are not enough gathering spaces and supporting **amenities** for
  them to celebrate and spend time with family and friends. Only 18 per cent of
  parks have picnic tables and of the 18 per cent, 50 per cent are **regional parks**which limits the amount of gathering spaces within **neighbourhoods**.

#### **Cultural Landscapes**

- Parks are not always planned with respect to Indigenous peoples and traditions.
- Improvements need to be made to support a more inclusive development process, including engagement, relationship building and collaboration to create a more inclusive **park system**.
- There is a general misunderstanding about what are considered cultural landscapes and their purpose.

#### **CONNECT:** Calgary's Parks Plan **7**

Challenges

## Action **4**

Challenges

## **Manage and Maintain**

Address management of the **park system** including **sustainable** funding, standardized maintenance and partnerships to increase safety.

#### Maintenance and Operation

- The amount of park land to be maintained has increased by 25 per cent while operating budgets have only increased by 12 per cent over the last 10 years.
- Increasing maintenance costs and capacity are issues in **regional parks** such as overcrowding, lack of parking and access to seating due to lack of desired **amenities** in local parks.
- Maintaining a lot of small, underused local parks is costly, which leads to lower standards of maintenance being provided across the system.
- Some Calgarians are experiencing a sense of inequity in park investment and management in relation to the **amenities** being provided, access to **natural areas** and tree **canopy** benefits. This is made worse by the volume of parks with aging **amenities** that cannot be prioritized for replacement due to underuse.
- The increased use of the **park system** is facilitating the spread of invasive species, with people being the principle direct and indirect vectors of spread. Invasive species have the second biggest impact to **biodiversity** after **habitat** loss. An increasing amount of time and money is required for management of regulated weeds, and other assorted pests.

#### Safety

- There is a lack of understanding on appropriate park usage leading to safety issues among cyclists, pedestrians and dog owners.
- Habitat fragmentation and increased human usage of **natural areas** increases the potential for wildlife conflict. In 2014 there were 16 bear encounters versus 56 in 2023. Similarly, there were 22 encounters with cougars in 2014 versus 56 in 2023.
- Social disorder and vandalism reduce usage of parks. 34 per cent of Calgarians said that they have either directly experienced or witnessed an unsafe situation in a City park according to the 2023 Pulse on Parks survey.
- The increased presence of encampments has created a perception that parks are unsafe. There is currently no parks wide strategy to address the relocation of encampments for the safety of people experiencing vulnerabilities and park users.

### **1.7 Connect's Response**

The strategic directions (outlined previously) have guided and informed the policy and operational actions presented in Connect. Delete and replace with Each of the chapters within Connect implements the actions and addresses the challenges previously discussed to realize the vision for the **park system**.

#### Chapter 2 Understanding the Park System

The **park system** is complex, this chapter explains the primary components of the **park system** in relation to the specific types of parks, their primary purpose and how the various elements of the **park system** are acquired by The City. The purpose of this chapter is help Calgarians to better understand the complex nature of the system and how it is developed and managed.

#### **Chapter 3** Connecting the Ecological Network, Urban Forest and Cultural Landscapes

This chapter provides policy direction for the **ecological network**, **urban forest** and **cultural landscapes**. While these components are vital to the system, they are not confined to public parks but are also found on privately-owned land. The **park system** does, however, play a key role in protecting these components by safeguarding **public trees** to support and enhance the **urban forest**, managing natural areas, which are the backbone of the **ecological network** and preserving and celebrating cultural landscapes for present and future generations.

#### Chapter 4 Connecting Neighbourhoods to Parks

This chapter focuses on supporting community building and connecting **neighborhoods** with their parks. It outlines a change in approach to providing parks in **neighbourhoods** by focusing on the development of large, centrally located **neighbourhood parks** that provide multiple functions in new neighbourhoods and enhancing functionality in existing **neighbourhoods**. This chapter also provides detailed policy to protect existing parks and **open space**, to accommodate future growth, and specific policy in relation to the purpose and management of each park type within the system, to ensure a standard level of maintenance and provision.

#### **Chapter 5** Connecting People to Parks

This chapter focuses on designing parks and **amenities** which encourage and promote park use and places for gathering, recreation and celebration for all ages, abilities and cultures. It looks at the elements and operational actions required to address safety and security issues to make parks beautiful, active and **accessible** to everyone where all people feel welcome. Direction is provided on how to support protection and enhancement of the environment, to make parks places for people to enjoy **nature** but also to make space for wildlife.

#### **Chapter 6** Development Connections: Utilities and Infrastructure

This chapter provides guidance on the location and requirements for utilities and irrigation in the **park system** to support development. Its policies take a multi-use approach to the incorporation of stormwater infrastructure which supports resiliency but also provides recreational benefits to park users.

#### Chapter 7 Implementing Connect

This chapter provides a clear line of sight to measure how Connect's policies support the strategic directions, and how the operational actions will be implemented, including who is responsible and the estimated cost to complete.

#### Appendix A Management of Natural Areas

The management of **natural areas** is complex and depends on **habitat** type and size. There are several **natural area** types which require unique management actions. Appendix A provides detailed guidance for management and allowable activities and uses related to different types of **natural areas**.

## **1.9 Role of Connect:** Calgary's Parks Plan in Relation to Other Plans

Since its approval by City Council in 2002, the Open Space Plan has guided the planning and development of Calgary's **park system**. Connect is replacing the Open Space Plan which aligns to provincial-level government policies and legislation, including the provincial *Land Use Policies, Municipal Government Act, Historic Resources Act*, and the *South Saskatchewan Regional Plan*. For matters specifically related to the planning of land acquired as **municipal reserve** and **municipal and school reserve**, Connect takes direction from The City's *Municipal Development Plan* and Calgary's *Joint Use Planning Agreement*.

Connect is a non-statutory plan that is intended to guide The City's decision-making for the development and management of Calgary's **park system** and inform future policies and decision-making for Local Area Plans, Area Structure Plans and development applications.

In addition, Connect forms the foundation for and provides direction to lower-level policies, plans and procedures that are specific to the Parks and Open Spaces business unit, including topic-specific strategic and business plans. It also provides direction on parks-related subject matter within similar documents in other citywide strategies and plans.

CHAPTER 2

CHAPTER 3

CHAPTER 4

## **Chapter 2** Understanding the Parks System

## 2.1 The Park System Overview

This chapter outlines the different components of the **park system**, the role that different park types play within the system, how parks are acquired and how they are maintained.

#### **Ecological Network, Urban Forest and Cultural Landscapes**

## **2.2** The Ecological Network, Urban Forest and Cultural Landscapes

The ecological network, urban forest and cultural landscapes are elements that are located across the park system but also on other land outside of the system.

#### 2.2.1 The Ecological Network

The **ecological network** consists of lands of ecological value primarily including **natural areas** and the river corridors, but are also supported by parks and open space. They exist within both developed and undeveloped areas of the city. Identification and protection of the **ecological network** forms the first layer of planning decisions when considering development. The City's *Municipal Development Plan* identifies policies for the protection and expansion of the **ecological network**, most of which are ultimately contained within the **park system** and Connect ensures their appropriate ongoing management. The ecological network is also located on private yards/property, road rights of way, and civic sites and therefore can all play a role in supporting connectivity within the network.

#### 2.2.2 Urban Forest

The **urban forest** is a critical component of healthy, beautiful and livable communities. It supports the wellness of residents, **climate resilience**, provides habitat for wildlife and mitigates the effects of urban heat islands. The **urban forest** is made up of trees and shrubs on all public and private lands in the city. 30 per cent of the **urban forest** is located on public land, including **boulevard** trees, trees within parks and tree stands in **natural areas**. The remaining 70 per cent of the **urban forest** is on privately-owned land and relies upon landowners for its survival. The City's *Municipal Development Plan* calls for The City to grow the urban tree **canopy** to 16 per cent by 2065. Connect supports the growth, protection and enhancement of the **urban forest** within all areas of the **park system** and provides direction to achieve the City's target for growth and protection.

#### 2.2.3 Cultural Landscapes

Cultural Landscapes are culturally and historically significant lands that provide spaces to connect us to our past and a rich, multi-faceted cultural identity. The **park system** plays a key role in protecting lands significant to Indigenous people or lands that have other historical and archaeological significance. These lands are sensitive to human impacts and the pressures of development. Proactive protection and management are critical for their protection and the celebration of these places now and in the future.

CONTENTS	CHAPTER 1	CHAPTER 2	CHAPTER 3	CHAPTER 4

- Additional benefits include:
- Wind and noise buffer

- Aesthetic and beautification
- Cultural and spiritual
- Social strengthening

Recreation

- Privacy
- Food production

## **2.3 Primary Park System Elements**

The park system is comprised of parks, natural areas and open space. Each component has unique functions and characteristics.

#### 2.3.1 Natural Areas

Natural areas are lands which have either been left in a natural state, rehabilitated to a near-natural state, or naturalized. The primary role of these lands is environmental protection, which supports biodiversity, habitats and the ecological network. They contribute significantly to climate adaptation by capturing stormwater and reducing heat and **climate mitigation** through pollution reduction, capturing and storing carbon and reducing greenhouse gas emissions. Natural areas also have a lower maintenance cost than the manicured areas of the park system. Common examples include wetlands, forests, prairie grasslands and riparian areas.

#### 2.3.2 Parks

Parks are formalized spaces located across the city which provide active and **passive recreation** opportunities, and access to **nature** and cultural experiences. Parks are organized by the type, role and purpose they serve within the **park system**.

#### **Regional Parks**

**Regional parks** are typically large or significant parks, featuring unique **amenities** or experiences, which serve multiple **neighbourhoods** as a citywide attraction. They include large **natural area** parks, culturally significant parks and parks with recreational functions or **amenities** including events. They are designed to support longer visits by patrons, as they commonly feature specialized services or activities and provide supporting infrastructure, including parking and washrooms.

#### **Local Parks**

Local parks within **neighbourhoods** are intended to serve local needs and should be **accessible** by walking and **wheeling**. There are several different park types within the local park category, each serving a different role and collectively are used to address the **amenity** and service needs of the **neighbourhood**:

- Joint Use Sites accommodate schools and playfields.
- Neighbourhood Parks the central park 'hub' of a neighbourhood.
- Sub-neighbourhood Parks provide supporting amenities which are not located within neighbourhood parks.
- Linear Parks spaces that connect parks, schools and activity areas within neighbourhoods.
- Community Association Sites places for organized neighbourhood gatherings.

#### **Plazas**

Plazas are unique, typically hardscaped parks that provide space for pedestrian movement and opportunities for primarily **passive recreation** activities. **Plazas** also support civic functions and events, including festivals, concerts, markets and exhibitions, therefore they require supporting **infrastructure** such as potable water and washrooms.

#### 2.3.3 Open Space

**Open space** is land that has a primary purpose that is utilitarian or to provide a recreational activity with managed access, but has a secondary purpose that provides **park system** functions. Examples include roadway greens, public utility lots, transportation and utility corridors and regional amenities such as regional sport fields, athletic parks, cemeteries and public golf courses. **Open space** may include lands that are not owned or managed by The City. **Open space** includes:

APPENDIX A

- Utility Right-of-Ways (URW)
- Public Utility Lots (PUL)
- Boulevards
- Roadside Greens
- Roundabouts
- Regional Amenities
   (regional sports fields,
   athletic parks, cemeteries,
   public golf courses)
- Transportation and Utility Corridors (TUC)

### 2.4 Other Lands that Complement the Park System

In addition to the **park system's** parks, **natural areas** and **open space**, there are other public spaces in Calgary that support recreation, sports and environmental functions complementing the parks system. They include but are not limited to Recreation Facilities, University Campuses, Calgary Municipal Land Corporation Urban Spaces, Calgary Zoo and Science Centre and other publicly accessible private open space.

## 2.5 Creating New Park Land

Land within the **park system** is acquired in four ways:

- 1. Land dedication during the development process:
  - municipal reserve, school reserve, or municipal and school reserve
  - environmental reserve
- 2. Purchase of new land by The City, including:
  - lands identified as conservation reserve
  - other lands to create dedicated natural areas, parks or open space
- 3. Conversion of City-owned lands from another use to a park
- 4. Donation of private lands

#### 2.5.1 Regional Park Space Provision

**Regional parks** are established to serve residents according to **equitable** need for access to regional-scale **amenities**, or to protect, complement and provide access to a significant environmental feature. They are typically acquired via purchase or donation but are sometimes complemented by reserve dedication.

#### 2.5.2 Local Park Space Provision

Since the 1960's, **local park space** has been acquired by The City through developer **municipal reserve** obligations when new **neighbourhoods** are developed. Prior to that time, local parks were acquired through a variety of means, including donation and purchase. *The Municipal Government Act* entitles municipalities to require developers to provide reserve lands for public benefit, through a variety of means:

#### Municipal Reserve and Municipal and School Reserve

During the subdivision process, The City requires dedication of **municipal reserve** and/or **municipal school reserve** of 10 per cent of the developable land proposed in a subdivision application. Such land is typically used to provide space for local needs and **amenities** such as schools, **playfields**, **community association sites** and parks. **Municipal reserve** may also be used to support regional needs for high school sites and regional athletic parks. These types of reserve lands are held in trust by The City and the three local school boards (The Calgary Board of Education, Calgary Separate School District and FrancoSud) in accordance with the *Joint Use and Planning Agreement*. The City's *Municipal Development Plan* provides additional direction on the dedication use of reserve land.

#### **Environmental Reserve**

**Environmental reserve** is dedicated to The City during subdivision when development lands are considered undevelopable, due slope instability, risk of flooding, or for protection of the natural environment. **Environmental reserve** lands are typically required to preserve natural

features, prevent pollution, ensure public access to water bodies and/or prevent development of land where the natural features of the land would present a significant risk of personal injury or property damage.

APPENDIX A

#### **Conservation Reserve**

Per the *Municipal Government Act*, **Environmentally Significant Areas** may be protected as **conservation reserve** through the subdivision process; however, this sort of reserve differs from the other reserve dedications in the sense that The City must identify, delineate and purchase these such lands from the developer at fair market value.

## 2.6 Maintaining the Park System

Appropriate and **equitable** park maintenance is an important factor in ensuring the ongoing use and enjoyment of the city's **park system** for all Calgarians. Well maintained parks contribute to the sense of place, comfort, safety and ownership necessary to connect people to parks.

Parks are maintained according to an established 'Customer Level of Service' tool that sets a maintenance standards and expectations for each of the different park types and the **amenities** within them. Further detail is provided on the current levels of service in Chapter 7, section 7.4.2. Parks are inspected annually and given a score which indicates their current condition compared to the desired standard. Investment in maintenance and upkeep is adjusted according to areas of greatest need throughout the system and available resources. **Regional parks** are maintained to a higher standard than local parks, as they contain specialized **amenities** and experience greater use and visitation. Local parks and **playfields** are all maintained at the same standard, with investment varying, based on usage.

Natural areas require unique maintenance and investment considerations to ensure their ongoing health and viability. The **habitat** condition of **natural areas** is inspected and evaluated every five years or following major restorations that may change the condition. Depending on the condition of the **natural area**, potential considerations include restoration, reduced public access and specialized mowing and weed management.

## **Chapter 3** Connecting with The Ecological Network, Urban Forest and Cultural Landscapes

CHAPTER 7

APPENDIX A

GLOSSARY

## **3.1 Introduction**

The ecological network, urban forest, and cultural landscapes are important components of the park system that extend past formal boundaries of the park system throughout the City as a whole. It is not the intent of this chapter to elevate these components above the **park system** but rather clarify that they are different because they might be located on other lands. Policies in Connect specifically address these components in relation to the park system only. Protection and enhancement of the ecological network and urban forest supports environmental conservation, resulting in city that is climate resilient with healthy, well-connected habitats. Access to natural environments and protected cultural landscapes also supports community building, civic pride, and individual physical and mental health.

## **3.2 Ecological Network**

The ecological network forms the backbone of a resilient city supporting biodiversity, ecosystems and diverse species. It improves the quality of life within the city by providing access to **nature** and cleaning the air, land and water.

#### **Outcomes**

- · The health and protection of ecological network is prioritized in planning and management decisions.
- Biodiversity is improved, wildlife corridors are connected and habitat health is enhanced.
- The park system is resilient to environmental shocks and changes.
- Underutilized parks and open space are naturalized, decreasing operational costs and increasing public access to nature.

#### Strategic directions this chapter align to:

CHAPTER 2

**CHAPTER 3** 

CHAPTER 4

#### **Policies**

#### Protect

- **a.** Ensure that the protection of the ecological network takes priority over other uses and activities in the park system.
- Maintain the park system to prevent degradation of natural areas.

#### Enhance

- c. Enhance the park system for ecosystem connectivity, biodiversity, wildlife and habitat conservation and climate resilience outcomes.
- **d.** Prioritize the **conservation** and restoration of **natural areas** in the **ecological network**.
- e. Naturalize areas of parks and **open space** adjacent to **natural areas**.

## **3.3 Urban Forest Policies**

The **urban forest** is an important asset for the city. In addition to supporting **climate resilience**, it serves as a public **amenity** contributing towards the health and wellbeing of Calgarians. To meet the citywide urban tree **canopy** target, The City, development industry and Calgarians all have a role to play in maintaining, protecting and growing the **urban forest**.

#### Outcomes

- The urban forest is expanded in appropriate habitats to meet The City's canopy targets.
- Growing conditions have been improved.
- The urban forest is more sustainable and healthier.

#### Figure 3.1 The urban forest is varied in terms of species diversity and tree location

#### **Policies**

#### **Support and Expand**

- **a.** Build a resilient and **sustainable urban forest** on Cityowned land that can tolerate and continue to thrive in future climatic conditions by ensuring:
  - Suitable space above and below ground for a full lifecycle of the tree to occur;
  - Align species preferences with growing media including soil volumes, suitable water movement, gas exchange and soil quality;
  - Increase species diversity and large canopied trees to enhance resiliency and reach canopy targets;
  - Adaptability of species selection in response to environmental events and changing climate;
  - Support for the use of innovative engineered soil profiles and technologies, watering practices, or other related technologies for enhanced sustainability; and
  - **6.** Identification of sites for planting micro forests to enhance **canopy** density.
- **b.** Ensure a no net loss of urban **canopy** on public land during the development process.
- **c.** Support the planting and maintenance of the **urban forest** on city owned land.
- **d.** Focus future tree planting in the **park system** where tree species are appropriate, prioritizing areas where inequity in tree **canopy** cover has been identified, where the urban heat island effect is greater than other areas and conditions are conducive to tree growth.

#### **Development**

- e. Retain existing mature canopy on future developable lands in new communities.
- **f.** Protect, enhance and create sustainable tree growing environments throughout the development process.
- **g.** Where existing public trees cannot be protected, compensation must be provided by the party responsible based on a monetary compensation model.
- **h.** A Tree Protection Plan for public trees must be submitted and approved by The City, prior to development activity including excavation, storage of construction material or access routes for people and equipment where the activity is proposed within 6 metres of an existing public tree or its drip line (whichever is greater).
- i. The City should encourage new planting and tree preservation on private lands, through partnerships and incentives.

## Figure 3.2 Extent of a trees structure within a boulevard

## **3.4 Cultural Landscapes**

**Cultural landscapes** are places with historical or cultural significance. Like other historic resources, **cultural landscapes** connect people with the past and identity. **Cultural landscape** conservation is considered a vital component of city building, as they contribute to great communities by enhancing sense of place, providing unique experiences and supporting well-being on multiple levels (mental, physical, emotional and spiritual).

**Cultural landscapes** in Calgary generally fall into three categories; landscapes significant to Indigenous communities; landscapes with archaeological resources (precontact and post-contact); and landscapes of recent history (post-contact). **Cultural landscapes** are managed to provide unique and authentic experiences, to celebrate the land on which Calgary sits, and to enhance the lives of Calgarians and visitors alike.

#### Outcomes

- Indigenous ways of knowing, being and doing is incorporated into the stewardship and management of cultural landscapes based on collaboration with The City.
- The management of cultural landscapes meets or exceeds regulatory requirements.
- Increased public awareness of Calgary's cultural landscapes.

#### **Policies**

#### **Advance Indigenous Priorities**

- a. Collaborate with The Indigenous Nations to identify culturally significant Indigenous landscapes.
- **b.** Cultural landscapes in the park system, as determined by the traditional and ancestral land stewards, should be managed with guidance from The Indigenous Nations.
- c. The City should collaborate with The Indigenous Nations and urban Indigenous people to advance the applicable calls to action identified in the *White Goose Flying* report.
- **d.** Support the traditional and sustained Indigenous presence on land in the **park system** including ceremonial, recreational, sport, cultural, artistic, harvesting, healing commemorative, social and environmental activities.

#### **Ensure Compliance**

- e. Cultural landscapes should be identified via a bi-annual review of the Alberta Culture Archaeological Data.
- **f.** The City should develop an Archaeological Framework to manage landscapes with archaeological resources.

#### **Integrate Best Practices**

- **g.** The City should legally protect **cultural landscapes** within the **park system** as municipal historic resources as outlined in *Alberta's Historic Resources Act*.
- **h.** The City should develop site-specific management plans to direct **cultural landscape conservation** measures and ensure the significance and integrity of **cultural landscapes** are conserved, based on Indigenous Traditional and Ancestral Knowledge, the *Alberta Historic Resource Act* and the *Standards and Guidelines for the Conservation of Historic Places in Canada*.
- Cultural landscapes should be integrated into all relevant site-specific management plans, where required (e.g., Habitat Management Plans, regional park management plans, standard operating procedures).

#### **Enhance Experience**

**j.** Encourage the development of park vistors' awareness through increased education opportunities.

#### **Development and Redevelopment**

- **k.** Development and redevelopment of **cultural landscape** sites within the **park system** should comply with *White Goose Flying, Alberta's Historic Resources Act,* and *The Standards and Guidelines for the Conservation of Historic Places in Canada.*
- I. All interventions on **cultural landscapes** in the **park system** require approval from The City.
- m. Development of cultural landscapes within the park system requires collaboration with City subject matter experts on conceptual design and construction processes to ensure long-term cultural landscape conservation.
- n. Upon submission of Historic Resource Impact Assessments ensure all documentation are reviewed by The City to assess opportunities for conservation of archaeological resources within the **park system**.
- o. Where archaeological sites are partially or wholly conserved in the **park system**, an Avoidance Plan and Conservation Strategy must be developed and approved in consultation with The City for the **cultural landscape conservation** of archaeological resources.

## **3.5** Operational Actions

See Chapter 7 for details on timelines, financial impacts, and implementation.

#### **Ecological Network**

**a.** Develop and implement a strategy for naturalization on city owned land within the **ecological network**.

#### **Urban Forest**

- **b.** Establish a cross departmental committee to focus expanding the **urban forest** and provide adequate staff to support the committee and coordinate the implementation of identified actions.
- c. Increase investment and prioritize planting, in collaboration with other business units, in areas of Calgary with growing limitations to address tree inequity.
- **d.** Deploy a public measurement to assess and report on tree **canopy** coverage and **equity**.
- e. Plant 1.3 million trees on public land over the next 10 years.

#### **Cultural Landscapes**

- f. Provide adequate staff to support the identification, conservation, and celebration of cultural landscapes.
   Provide operational and cross-corporate support to track and report on progress.
- **g.** Co-create a Guiding Circle to address and advise on the management of the **park system**.
- h. Finalize an Archaeological Resources Framework.
- i. Establish and utilize a cultural landscape dataset.
- **j.** Develop guidelines for the education and interpretation of **cultural landscapes** for children that are aligned with the Alberta Education curriculum.

CHAPTER 4

## **Chapter 4** Connecting Neighbourhoods to Parks

GEWENT PURPOSES ONLY

## **4.1 Introduction**

A goal of Connect is to create a well-connected **park system** that provides access to recreation, sport, and **environment** functions. The City strives to ensure that neighborhoods have enough of the right type of park space. However, as the city grows and densifies, pressure on the **park system** will increase. Applying consistent metrics to park provision helps ensure that design, management and land stewardship decisions create an inclusive, **equitable** and connected **park system**. Connect uses best practices in park planning to outline provision measures, ensuring all Calgarians have access to an adequate quantity of parks with varied functions.

This chapter outlines a hierarchy of parks to ensure the adequate quantity and functionality of parks during planning. The park typologies will guide the development and redevelopment of parks, resulting in a well-designed, **accessible** system that meets neighborhood preferences.

#### Outcomes

- Access to recreation, sport and environment functions are equitably provided to Calgarians across the park system.
- Parks are integrated and well connected within the urban landscape and are accessible by active transportation options such as walking, wheeling and cycling.
- Parks are a hub of community life, providing cohesion, a sense of place and stewardship.
- Park development and redevelopment is driven by spatial data and best practices.
- Parks are multifunctional and operationally sustainable.
- Natural areas are protected.
- Biodiversity is improved, wildlife corridors are connected and habitat health is sustained and enhanced.

#### Strategic directions this chapter align to:

Conservation and Protection of the Environment

Support Communities

Climate Resilience

Cultural ndscapes

Inclusive and Accessible

Safety and Security

Connectivity for People and Wildlife

Economic Resilience

Physical and Mental Health and Wellbeing

Innovation

## **4.2 General Local Parks Policies**

Parks are essential components of urban living that contribute to healthy communities and climate resilience. Parks are primarily acquired through land dedication upon development, but they are also acquired through purchase, donation, or the conversion of other City-owned land. Acquiring land outside of the development process is difficult due to cost, availability and other interests or uses in the land. As the city grows, pressure increases on the **park system** due to increased demand. The application of consistent park provision metrics informs design, management and land stewardship decisions that lead to an inclusive, **equitable** and connected **park system**.

The City's *Municipal Development Plan* includes park provision metrics which aim for 2 hectares of **local park space** per 1,000 people in each Local Area Plan. Connect refines this target and how it is measured by using community boundaries as the scale, enabling a better response to the local context.

Park space is measured differently in **Greater Downtown**. The historical development of the **Greater Downtown** area as a commercial office space and tourism destination meant that its parks were developed to support more intensive regional use. As residents of downtown share these parks with other visitors, both regional and **local park space** is part of the quantity calculation.

To fully understand park provision in an area access must also be considered. A common standard is that residences should be within 400 metres of a park, which is considered a walkable or wheelchair-**accessible** distance without the use of a vehicle. Connect improves on this standard by measuring access to three different park functions: recreation, sport and environment.

CHAP	TER 5
------	-------

#### **Policies**

#### Quantity

- **a.** Park quantity is measured by hectares of park space per 1,000 people by community boundary:
- **b.** Adequate land provision of **local park space** in a community is 2 hectares per 1,000 people.
- c. Adequate land provision park **space** (local and regional) in the **Greater Downtown** is 1 hectare per 1,000 people.
- **d.** Parks and **natural areas** should not be disposed of, or converted to any other use, unless one or more of the following criteria are met:
  - 1. the size, shape or location of the land renders it unusable for park use or environmental functions;
  - **2.** another strategic interest is deemed a higher priority than the provision of the park space by The City; and
  - **3.** there is no net loss of park land serving the existing catchment area.

#### Figure 4.1 Parks provision per 1,000 people

CHAPTE	R	5
--------	---	---

## **Map 3** Park Space Provision in Greater Downtown (hectares/1,000 people)

### **Policies**

### **Access and Quality**

- e. Inclusive parks are those which meet the needs of various user groups and ages. Creating parks which have various functions will help to build an inclusive system which caters to different ages, abilities and interests. Connects goal is to create **multifunctional parks** that are within 400 metres of people's residences. Access is measured from all park types including **regional parks** which are multifunctional. These three functions broadly represent the main uses within the **park system**:
  - Recreation function is provided through spaces and amenities that support a variety of informal activities which allow for opportunities to enjoy passive play, areas to gather and rest, areas to walk, wheel or skate.
  - 2. Sports function is provided through **amenities** that allow for organized sport, usually they are facilitated through a sport surface such as basketball courts, soccer fields and disc golf courses but may also include skate parks and pump tracks.
  - **3.** Environment function is provided through spaces that offer a more natural setting; these are not manicured but allow for access to the wild within the city. They can include wetlands, mini-forests and unmanicured naturalized spaces.
- **f.** A park is considered multifunctional when it supports at least two of the three functions: environment, sports and recreation.
- g. A balance of functions should be delivered throughout the park with no one function being dominant, notwithstanding policy 4.4.5 and except for existing or newly identified **natural areas**.
- **h.** All residences should be within a 400 metre pedestrian trip of a **multifunctional park**.
- i. Reduce gaps in access to **multifunctional parks** through capital projects and community design.

CONTENTS

CHAPTER 1

CHAPTER 2

**CHAPTER 4** 

The following is a list of components that make up each park function. This list is not exhaustive but provides a reference for the type of amenities provided under the different functions.

#### Figure 4.2 The Three Park Functions

### **Environment Function**

Natural areas Naturalized areas Waterbodies Tree stands Constructed wetlands

**Recreation Function** 

Picnic and BBQ spaces Gathering spaces Exercise equipment Spray parks Playgrounds Plazas Leisure skating (loops) Toboggan hills Off leash dog areas

### **Sport Function**

Soccer pitch Cricket fields Baseball diamonds Tennis courts Basketball courts Pump tracks Skate parks Disc golf courses Ice rinks

#### Figure 4.3 400 m Pedestrian Access to a Park

### **4.3 Local Park Provision in New Development Areas**

In greenfield areas **local park space** is primarily provided through **municipal reserve** and **municipal school reserve** dedication. Prioritizing neighborhood needs, like parks and schools, is crucial. **Joint use sites** typically occupy a significant portion of the reserve dedication, leaving the rest for **local park spaces**. To utilize reserve land effectively, a priority list of park types ensures a well-connected, multifunctional **park system** is provided. Multifunctional neighborhood parks are given top priority, followed by linear and sub-neighborhood parks to improve functionality and accessibility within neighbourhoods.

### **Policies**

### **Joint Use Sites**

**a.** Joint use sites should be provided in accordance with the *Joint Use Planning Agreement*.

### **Local Park Space**

- **b.** Local park space should be allocated based on the following priorities:
  - The provision of a multifunctional neighbourhood park should be prioritized in the neighbourhood.
  - 2. Use linear parks to connect parks, natural areas, open space and other community destinations.
  - Supplement the park system in a neighbourhood with sub-neighbourhood parks to achieve access targets and provide a mix of functions.

# **4.4 Local Park Provision in Existing Neighbourhoods**

In Calgary neighborhoods established before 1968, parks were developed without modern planning regulations, leading to inconsistencies in park availability and **amenities**. As it is challenging to acquire land in existing neighborhoods for new or expanded parks, identifying gaps in park provision during the planning phase is crucial to meet growing demand and demographic changes. Identification of gaps is not intended to limit growth but ensure that parks are enhanced where provision targets cannot be met. These gaps can be filled through various methods like converting public land, temporary uses or improving **amenities** in existing parks.

#### Plazas

- **c. Plazas** are an exception to the priority list in policy 4.3.2 and should be provided in context specific locations based on the policies in 4.5.5.
- **d.** Provide an **equitable** distribution of **amenities** under each of the park functions.

CONTENTS
----------

CHAPTER 2

### **Policies**

### **Planning Parks**

- a. Desired park functions should be determined based on local need, current and future demographics and neighbourhood engagement.
- **b.** Identify capital investment options to address the impact of **intensification** on the capacity of existing parks.

### **Enhancing Parks**

- c. Identify existing parks to be enhanced or provide new parks in areas where residences are deficient in one or more of the three functions.
- **d.** The City should address gaps identified in the provision of **multifunctional parks** by:
  - providing additional functions on existing single function parks, where accessibility gaps exist; or
  - 2. enhancing the walking and **wheeling** connections to provide access to existing **multifunctional parks**.
- e. If access gaps exist in areas where there are several small parks that are not suitable for multifunctionality and no larger park space exists, a group of parks within proximity to each other should be comprehensively enhanced to provide different functions.
- f. Create new park opportunities and enhance the existing park system by:
  - targeting acquisition of land, where feasible, in underserved **neighbourhoods** where provision objectives are not being met;
  - converting under-utilized publicly owned parcels into parks;
  - converting strategically selected streets to parks or play streets;
  - seasonally closing streets and alleys;
  - supporting innovation in the design of **boulevards** and converted **multimodal** linkages to support unstructured play;
  - developing new parks near higher density areas;
  - utilizing unconventional and innovative space; and
  - supporting the provision of publicly accessible private open space through development.

- g. Where the provision of additional park space as per policy 4.4.6 is not feasible, the quality of park space should be enhanced by providing additional **amenities** and **programming** to support more intense usage and multifunctionality.
- h. The (re)development and use of parks should incorporate:
  - 1. public engagement input;
  - 2. accessible, adaptable and resilient design;
  - 3. the Calgary Equity Index;
  - 4. projected climate change impacts;
  - 5. the nature of adjacent amenities and parks; and
  - **6. amenity** provision that meets the needs of residents by being inclusive, and reflective of their current and future demographics and culture.

CHAPTER 7

ER 7

APPENDIX A

GLOSSARY

#### Figure 4.4 Adding Functionality to Parks

### Policies

### **Greater Downtown**

- i. Calgary's Greater **Downtown** includes the neighborhoods of Downtown West, Eau Claire, Chinatown, East Village, Downtown Core and the Beltline. This area already has some of the highest residential densities in Calgary, which will increase through further densification and population growth. The quantity of land for parks in Greater Downtown is limited, and existing parks are well-used and valued by residents and visitors. The lack of private outdoor space means that parks in these neighborhoods frequently double as people's backyards, providing much-needed spaces for access to environment, sports, recreation and leisure. High-quality infrastructure and public amenities in Greater Downtown parks are needed to keep pace with population growth, support quality of life and foster vibrant urban environments. In addition to the previous policies below, the policies in Section 4.4 also apply to the Greater Downtown.
  - j. Develop parks and **amenities** in nontraditional locations while ensuring public access and safety, such as rooftops, parking lots and **plazas**.
  - k. Expand existing parks by acquiring adjacent lands or utilizing street space by allowing parks beyond their boundaries to support play streets, programming and accommodate more functions.
  - I. Design parks and their **amenities** to support higher carrying capacities, and provide destination spaces for cultural activities, festivals and unique experiences.
  - **m.** Create refuge spaces in parks for residents and workers that provide comfort and respite from urban noise and the lack of private outdoor space.
  - **n.** Improve connections to new and existing park spaces along the Bow and Elbow Rivers.

CONNECT: Calgary's Parks Plan 37

### 4.5 Local Park Typologies

Local park typologies are intended to address the needs of **neighbourhoods** by providing varying levels of **amenities** at different scales. These different types are intended to serve a distinct purpose, while contributing to a comprehensive system of parks within a **neighbourhood**. The **neighbourhood park** and **joint use site(s)** will serve as focal points in the **neighbourhood** with **linear parks** providing connectivity. **Sub-neighbourhood parks** should supplement the **neighbourhood** and **linear parks** by enhancing access and providing more localized **amenities**.

### **Policies**

### 4.5.1 Joint Use Sites

Joint use sites should be provided in accordance with the Joint Use Planning Agreement. These sites serve both school and park needs. They typically provide a sports function and may complement an adjacent **neighbourhood park's amenities**.

- a. Provide sports amenities on joint use sites that meet demographic and school programming needs.
- b. Joint use sites should be located where they:
  - 1. complement park multifunctionality;
  - 2. contribute to the park access in the neighbourhood; and
  - **3.** enhance **activity centres** and support recreation facilities, where appropriate.
- c. Promote the incorporation of tree planting, **naturalization** and urban agriculture projects within **joint use sites**, where feasible.
- **d.** Prior to Outline Plan approval, all school site designs require approval from the Site Planning Team.
- e. The City should explore the acquisition of **joint use sites**, not located on reserve land that are wholly owned and declared surplus by one of the respective school boards.

### 4.5.2 Neighbourhood Parks

To support community building **neighbourhood parks** are the focus of park provision. **Neighbourhood parks** are the primary multifunctional gathering space and hub of activity. They are large enough in scale to provide multifunctionality and a variety of **amenities**. Due to their size they may also be appropriate locations to incorporate **green stormwater infrastructure** if it does not negatively impact the primary function of the park.

- a. A neighbourhood should have a multifunctional neighbourhood park as the focal point for park activity and programming.
- **b.** Joint use sites and community association sites are not considered neighbourhood parks for the purpose of policy (4.5.2.a).

- **c.** Neighbourhood parks should be no smaller than 1 hectare and no larger than 4.85 hectares (2.50-12 acres) in size.
- d. Neighbourhood parks should be located:
  - centrally in areas that maximize 400 metre access, on or near a collector road and be supported by adjacent transit stops; or
  - **2.** where deemed appropriate, adjacent to a significant waterbody or landform.
- e. Neighbourhood parks should provide 33 per cent (<sup>1</sup>/<sub>3</sub>rd) of the parks perimeter with street frontage to maximize visibility within the neighbourhood.

## **Figure 4.5** Potential Components of a Multifunctional Park

### 4.5.3 Linear Parks

Linear parks are linkages within the park system that provide space for interesting and safe mobility connections to other parks and community destinations. They support active lifestyles and enable people to access parks and their amenities more easily. Linear parks may also accommodate green stormwater infrastructure as a secondary function.

- a. Provide an attractive environment for the purpose of walking, wheeling and other passive forms of recreation.
- **b.** Connect new and existing parks and **open space**, **habitat** corridors, commercial areas, institutional uses and community destinations.
- c. Linear parks should not be provided where they are isolated from the rest of the park system in a neighbourhood.
- **d.** Linear parks should not replace **boulevard infrastructure** such as multi-use pathways, sidewalks, utility and tree line assignments.

- e. Pathways and sidewalks should complement linear **parks** to create an interconnected system of walking and cycling loops.
- f. Linear parks should:
  - 1. be a minimum of 13 metres and a maximum of 20 metres wide;
  - 2. have an uninterrupted length 200 metres unless an intersection is required that has a surface treatment allowing for safe and **accessible** pedestrian crossings;
  - provide access and egress at regular intervals, usually every 150 to 300 metres with sidewalks, pathways or walkways;
  - 4. accommodate appropriate **amenities** where suitable;
  - 5. include naturalized space; and
  - 6. provide seating and shaded areas.
- g. Linear parks may accommodate green stormwater infrastructure where the required landscaping and amenities of the park are not negatively impacted.

CHAPTER 5	CHAPTER 6	CHAPTER 7	APPENDIX A	GLOSSARY

#### Figure 4.7 Linear Park Example with Pathway and Landscaping

### 4.5.4 Sub-neighbourhood Parks

Sub-neighbourhood parks are intended to provide a variety of amenities that differ from the neighbourhood park(s) and support accessibility of the park system for residents. They should be well connected within the neighbourhood through the pedestrian network or linear parks.

- a. Sub-neighbourhood parks should be between 0.40 hectares and 1.00 hectare in size.
- **b.** Parks under 0.40 hectares in size should not be considered as part of credit reserve dedication in new development, except where:
  - the municipal reserve dedication would be under 0.40 hectares;
  - 2. the park will be located within an activity center; or
  - 3. the park will function as a plaza as per policies 4.5.5.
- c. Existing parks under 0.40 hectares in size should be

CHA

#### d. Sub-neighbourhood parks should:

- supplement the neighbourhood park and linear park amenities;
- be provided where reserve dedication is less than
  1.0 hectare, after joint use sites have been allocated;
- 3. be programmed for multifunctionality;
- avoid duplication of amenities within the neighbourhood catchment area to serve the needs of various demographics, culture, interests and abilities; and
- be located to enhance visibility and access for walking and wheeling.
- e. Redevelopment of existing parks under 0.40 hectares that cannot meet the requirements of policy 4.5.4 (a) due to parcel size or shape should be designed with a specific function that supports the multifunctionality of the combined parks that are in close proximity.

### **4.5.5 Plazas**

**Plazas** are a unique park type within the urban environment, the design of which should be influenced by its intended function and relationship with the public realm, ensuring a strong visual identity, sense of place and support community building. They provide space for Calgarians to gather, play, celebrate, attend arts and culture events and perform civic activities. They provide year-round, attractive, inclusive, **accessible** and flexible urban spaces that allow for a concentration of people, support permanent and interim activities and are strategically located near transit.

- a. Locate **plazas** in activity areas, parks and areas that are accessible by the Primary Transit Network and the **wheeling** network.
- **b. Plazas** should only be standalone parks in Greater Downtown and activity areas.
- c. Support **plazas** in private development when the space is always **accessible** to the public.
- connect the plaza space with surrounding uses and developments to allow for spilling of activities into the plaza space to foster vibrancy and consistent use of space.
- e. Support interim uses in **plazas**, including events, film production, markets, retail kiosks, exhibitions, etc.
- **f.** Prioritize pedestrian movement in and around **plazas** and incorporate design and interventions that minimize conflicts between cars, cyclists and pedestrians.
- **g.** Design **plazas** to be vibrant, welcoming, **accessible** and playful by:
  - 1. using eco-friendly, permeable hardscaped finishing;
  - integrating trees, green and permanent structures in a way that support the plaza function;
  - including supporting infrastructure (e.g., lighting, garbage/recycling containers, potable water and electrical outlets);
  - 4. including permanent and removable urban furniture that complies with Access Design Standards and is multifunctional (e.g., gameboard benches/tables), comfortable and reflects the character of the **plaza** (e.g., commemorative, or site-specific features); and
  - **5.** incorporating directional tactile walking indicator surfaces.
- **h.** Celebrate our history or the accomplishment of Calgarians by displaying permanent structures or interpretative signage.

- i. Provide outlet stations that are powered by renewable sources to support interim events and facilitate micromobility charging (e.g., E-bikes, scooters).
- **j.** Design **plazas** adjacent to transit stations that in addition to the provisions above, will:
  - support high volume of pedestrian activity especially near station entranceways and bus stops;
  - 2. provide clear connections to and from surrounding pedestrian and **wheeling** infrastructure;
  - 3. include parking for wheeling devices; and
  - **4.** consider shared-mobility device (e.g., scooters, bikes, cars) parking areas in or nearby the **plaza** space.
- **k.** Provide permanent or operable shading that can cover half or more of the of the **plaza** area to enable summer use.
- I. Provide drinking water, misting stations, and air-conditioned indoor facilities.
- **m.** Provide features that provide warmth to enable winter use, such as fire pits, heaters and heated indoor facilities.

### 4.5.6 Community Association Sites

**Community association sites** provide space for community association facilities and **amenities** and are important for building community stewardship and cohesion. The City supports community associations through the provision of land.

- a. Encourage the location of **community association sites** adjacent to **neighbourhood parks**.
- **b.** Amenities constructed on community association sites, prior to the establishment of the community association, should comply with the *Parks and Open Spaces Design Guidelines Standards and Specifications – Landscape Construction*.
- c. Enhanced or non-standard **amenities** may be considered, prior to the establishment of the community association, if the developer(s) enters into a satisfactory agreement with The City.

### 4.6 Regional Parks

**Regional parks** are designed to accommodate a range of activities, serve multiple **neighbourhoods**, support longer durations of stay, include specialized **amenities** such as water features, multi-sport surfaces, cultural landscapes and can accommodate large event spaces.

- **a.** All residences should have regional park access within five kilometres driving distance.
- **b.** Existing **regional parks** should be upgraded and improved to meet demand.
- c. Future regional parks should be developed to address:
  - 1. gaps in the five kilometre provision standard; or
  - 2. a specific regional amenity need.
- **d.** Identify and acquire additional land to enhance regional park provision, where required.
- e. Regional parks may be located to protect significant or unique natural environment features (water bodies, geological anomalies, etc.), the ecological network or cultural landscapes.

- **f.** Recreational and sports functions in **regional parks** should deliver **equitable** opportunities by providing:
  - 1. design for all ages and abilities;
  - 2. design for multigenerational usage;
  - 3. all-season programming and activities;
  - 4. adaptability and inclusiveness;
  - 5. both passive and active amenities;
  - 6. design that is accessible based on universal design; and
  - 7. regional-level **programming** (i.e., outdoor aquatics, athletics, culturally specific amenities).
- **g. Regional parks** should include **infrastructure** to support longer durations of stay, including washrooms, covered seating areas, shade structures and cooling stations.
- h. Regional parks, excluding natural areas, should provide a designated event site and developed to include elements such as utility and electrical connections, access to potable water, staging areas, etc.

**CHAPTER 4** 

### 4.7 Natural Areas

The role of **natural areas** is to primarily protect undisturbed land with characteristics of a **native** plant community. These parks support **biodiversity** and provide access to **nature** for residents. The protection, management and use of **natural areas** differs from other park typologies due to their sensitivity to degradation. Appendix A outlines detailed management for the different **natural area** types.

### **Policies**

### **General Restrictions**

- a. Damage or disturbance of lands to be dedicated as environmental reserve prior to subdivision is not permitted. If damage or disturbance does occur, the developer is responsible for restoration.
- **b.** Back sloping or other modifications should not be allowed on **environmental reserve**.
- c. Activities and uses that conflict with the protection of the natural environment or cause environmental degradation are not permitted in **natural areas**.
- **d. Natural areas** modified or disturbed will require restoration of the area as per an approved Habitat Restoration Plan. Where modification or disturbance results in a loss of a **natural area** compensation must be provided to The City.

### Management

- e. A Habitat Management Plan should be required for new natural areas as part of the development approval process.
- **f.** Where there is an approved **Habitat Management Plan**, all uses and activities must comply with the plan.
- **g.** Where there is no approved **Habitat Management Plan** in place for a **natural area**, it should be managed in accordance with Appendix A.
- **h.** Encourage the use of alternative land management practices, such as fire and animal grazing.
- i. New **natural areas** should be designated in accordance with Appendix A.
- j. Structures located in **natural areas** should be designed and managed to avoid and minimize negative environmental impacts to **habitat** structure and function, and ecological systems and services.

### 4.8 Open Space

**Open space** has a primary function separate from parks but offer secondary benefits that support the **park system**. They include utility right-of-ways, **public utility lots**, **boulevards**, roadside greens, **public golf courses**, regional sport fields, athletic parks after public golf courses, and **cemeteries**. These spaces provide different levels of park **amenities**, and because of this they have varying policy direction in Connect, both in this section and throughout the document. Lands that are **open space** typically support the **park system** by providing a unique amenity, naturalized areas, **urban forest**, or connecting parks and **natural areas**.

# **4.8.1** Sport Fields and Athletic Parks (Regional)

Regional sport fields supplement City **athletic parks** by providing additional space for sport and recreation opportunities. They are intended to provide greater access to fields, particularly in areas that may not have **athletic parks** nearby. They are built to a lower operational standard than City **athletic park** fields.

### **Policies**

- **a.** Regional sports fields should be provided through partnership negotiation, donation or direct purchase.
- b. Municipal reserve land in commercial or industrial areas may be considered suitable for the development of regional sports fields.
- c. Regional sports fields should:
  - 1. be designed to take advantage of year-round, multiuse and recreational opportunities;
  - 2. be designed to provide shade and cooling amenities;
  - **3.** be designed using new technologies to reduce water consumption;
  - address regional need and prioritize equitable access addressing systemic barriers to participation; and
  - **5.** align with The City's Sport Field Strategy, Sport for Life Policy, and GamePLAN.
- **d.** Regional sports fields should not use synthetic turf unless accompanied by permanent or operable shading for the play surface and adjacent heat management measures, like drinking water, air-conditioned indoor areas and stormwater management features.

### 4.8.2 Public Golf Courses

**Public golf courses** offer various programs and services to the public; prioritizing golf opportunities and supporting other **equitable**, **accessible**, year-round uses.

- a. Provide equitable access to golf.
- **b.** New partnership opportunities should be considered to support provision of programs and services provided.
- c. Year-round multi-use should be encouraged through a mix of design, supporting **amenities** and programming.
- **d.** Contribute to and support the **sustainable** operations of **public golf courses** by following the *Canadian Golf Superintendents Association's Best Management Practices Manual.*
- e. Use operational practices that protect ecological connection in support of **biodiversity** and wildlife movement.
- f. Incorporate new technologies to reduce water consumption.
- **g.** Tree **canopy** should be retained and expanded to the extent that it maintains the integrity and function of golf course assets.

CONTENTS	
----------	--

CHAPTER 2

### 4.8.3 Cemeteries

The City's **cemetery** services provide safe and dignified spaces for the respectful **interment** and memorialization by families and their loved ones while also contributing to the overall **park system**.

### **Policies**

- a. Any new cemetery lands should be designed to accommodate appropriate uses, such as pathway connections to the edge of the site and internal walking trails.
- **b.** Support naturalization, **climate adaptation** and enhancement of the urban tree **canopy** with no net loss of **canopy**.
- **c.** Development, maintenance and operations should incorporate best practices such as:
  - 1. new technology to reduce water consumption;
  - 2. increased naturalized areas to enhance biodiversity;
  - **3.** climate resilient design such as green stormwater and low impact development (LID) infrastructure; and
  - 4. cultural and historical **conservation** and education.
- **d.** Provide **equitable** access to different religious and cultural **interment** options.
- e. New cemetery development should provide green burial options.

### 4.8.4 Privately-Owned Public Spaces

Private open space that is publicly accessible can contribute to the **park system** in areas with low supply of public land, but The City has limited control over their design or development.

- Privately-owned, publicly accessible park spaces are encouraged to complement and connect to the park system.
- **b.** On private land encourage the:
  - establishment of publicly accessible green roofs and roof gardens;
  - 2. retention of mature trees and planting of new trees;
  - conversion of impervious surfaces to vegetated solutions like permeable pavement and plantings to support biodiversity and stormwater absorption; and
  - **4.** design of publicly accessible private park space to align with the policies set out in Connect.

CHAPTER 7

APPENDIX A

GLOSSARY

# **4.8.5** Boulevards, Roadside Greens and Roundabouts

Boulevards, roadside greens and roundabouts provide space for trees and landscaping. They improve the street's appearance, create a sense of identity and provide **habitat**. Given the quantity of these spaces, they can contribute to **biodiversity** and **climate adaptation**. Through naturalization, **boulevards** and roadway greens can better support **biodiversity** and result in reduced maintenance costs.

### Policies

- **a. Boulevards** should be developed to incorporate seating and resting spaces.
- **b. Boulevards**, roadside greens and roundabouts should be naturalized unless otherwise approved by The City.
- c. Roadside greens adjacent to Environmental Significant Areas, environmental reserve or within the ecological network should be prioritized for naturalization.

Figure 4.8 Naturalization Along a Boulevard

Figure 4.9 Naturalization Along a Roadway

### 4.9 Regional Partnerships

Intermunicipal partnerships promote connected **park systems** and the protection of **natural areas** and water quality. Municipalities understand that the needs of rural and urban residents vary, and conflicts are best resolved through ongoing information-sharing and negotiation on emerging issues to address their residents' needs.

### Policy

a. The City will work with adjacent municipalities, The Indigenous Nations and the Province to support and facilitate connectivity of ecological connections, parks and pathways that cross municipal boundaries.

### **4.10** Operational Actions

See Chapter 7 for details on timelines, financial impacts, and implementation.

### **Park Provision**

- **a.** Develop a master plan to identify capital investment and address gaps and development needs.
- b. Include community engagement where appropriate, at all stages of park development and management from planning, designing, **programming** and operating to ensure parks are reflective of demographic and cultural needs.
- **c.** Develop a strategy to identify locations for fenced off-leash **dog areas**.

# Local and Regional Park and Regional Amenity Management

- **d.** Utilize the Customer Level of Service tool to assess that 100 per cent of park types meet the defined standard level of service by 2035.
- e. Complete an annual report and assessment of Customer Level of Service metrics to address deviations in the targets set by *imagineParks*.
- **f.** Provide administrative and educational support to City staff responsible for park maintenance annually to carry out the Customer Level of Service Tool review of park types in their zones.
- **g.** Update the Customer Level of Service tool every five years to ensure all categories are relevant.
- **h.** Use data and innovative practices to evaluate mowing and improve operational efficiency.
- i. Ensure all City staff and contractors responsible for park maintenance have completed the required safety training and protocols.
- j. Collaborate with other City business units to develop an investment prioritization tool for park redevelopment based on maintenance levels, asset condition ratings, significance, usership and equity.
- k. Develop an equity framework, in partnership with other City business units, to evaluate a citywide level of service as an additional layer to the Customer Level of Service tool.

- I. Establish accreditation as a member of the Audubon Cooperative Sanctuary Program for **public golf courses**.
- m. Establish an equity fund to provide additional maintenance, capital investment and servicing to equity deserving communities.
- n. Investigate how community food assets such as community gardens, farmstands and markets could be integrated into the **park system**.

#### **Playfield Management**

- Complete an allocation and permitting process review to reduce blanket bookings by user groups and develop a transparent and **equitable** allocation system which can be processed in a timely manner.
- p. Develop and implement standardized maintenance practices for **playfields** based on the class of field to set clear maintenance expectations among user groups.
- **q.** Collaborate with public school boards to support increased maintenance on Class E fields to expand their standard to a Class D.
- collaborate with public school boards to add High School fields not currently in the booking system to increase availability.
- s. Increase standard of maintenance to Class D fields to create a Class D+ fields to better support a greater range of use for different skill levels.
- t. Increase capacity to process field permits and address 311 inquiries quickly and efficiently.
- **u.** Pilot emerging sports on existing sport surfaces, and design future sport surfaces to support multiple sports.

CHAP	TER 5
------	-------

### **Natural Areas Management**

- v. Assess and update the cost of maintenance to preserve the value of **natural areas**.
- w. Develop and implement a compensation model for damage to **natural areas**.
- Develop 10-year, operational Habitat Management
  Plans for all natural areas.
- y. Allow litter control only management with guidance, in **natural areas** to be included in enhanced landscape maintenance requirements.

### **Funding Parks**

- z. Establish a sustainable funding source for park development, redevelopment and management in established areas such as neighbourhood renewal program, redevelopment levies or dedication of a portion of the mill rate to Parks and Open Spaces.
- **aa.** Explore alternative management models such as land trust, conservancies and Indigenous partnerships.
- bb. Develop a process to utilize funding such as, but not limited to, the Established Areas Investment Fund, Legacy Fund, Equity in Service Delivery Fund to address provision gaps prioritizing equity deserving communities, areas of high utilization and parks with poor asset condition ratings.
- **cc.** Continue to leverage provincial and federal funding to support gaps in park provision.
- **dd.** Continue to support partnerships that can address provision gaps with prioritization of projects such as addressing **barriers** for **equity** deserving groups.

### Supporting Neighbourhood Stewardship and Volunteerism

- ee. Create and implement a volunteer and partnership assessment tool in alignment with *imagineParks Strategic Plan and Calgary Climate Strategy* to ensure effectiveness and value for Calgarians.
- **ff.** Create a framework of standards and a training program for volunteers.
- gg. Work with Enhanced Landscape Maintenance communities to promote environmentally resilient practices such as drought resistant seeding, planting native species, reduced irrigation and xeriscaping.
- **hh.** Increase community-based efforts to engage youth and **equity** deserving groups in volunteer initiatives which address their needs and **barriers** to participation.
- ii. Develop a strategy and standardized process to evaluate requests for enhanced or non-standard amenities which considers equity and long-term financial sustainability for The City.
- jj. Establish and sustain a citywide community volunteer group that can enhance levels of service in equity deserving communities.
- **kk.** Build capacity in **equity deserving communities** using the citywide volunteer group to mentor and support those communities.
- II. Expand volunteer programs, such as Adopt-a-Park and Green Initiatives, and ensure programs meet City and community needs.
- mm. Advance Calgary becoming a National Park City.

# **Chapter 5** Connecting People to Parks

GLOSSARY

### **5.1 Introduction**

The previous chapter focused on providing and accessing of parks with a range of functions for **neighbourhoods**. While access and quantity are important, the quality of parks is a key driver of usage and enjoyment. Quality is addressed through park design, **amenities** and **programming**. These components are what create inclusive, safe, well used and desirable parks.

### Outcomes

- Parks are vibrant spaces that provide a wide range of opportunities for celebration, community gathering, activities and relaxation.
- Parks are safe spaces where users feel comfortable.
- People of all ages and abilities have opportunities to enjoy and access parks.
- Parks are easy to locate and information about them is easily accessible.
- Innovative park design addresses the complexities of user and environmental needs.

### Strategic directions this chapter align to:

Conservation and Protection of the Environment

Support Communities

Resilience

Cultural Landscapes

Inclusive and Accessible

Safety and Security

Connectivity for People and Wildlife

Economic Resilience

Physical and Mental Health and Wellbeing

Innovation

CHAPTER 2

CHAPTER 3

CHAPTER 4

### 5.2 Park Design

Good park design helps to build places and spaces that facilitate healthy, happy and prosperous **neighbourhoods**. To achieve this, design components need to consider park user needs and wants through an **equity** lens. Development adjacent to parks also affects park vitality, therefore careful design consideration is paramount.

### **Policies**

- **a.** Parks, where appropriate for the park type, should be designed to:
  - be inclusive and incorporate universal and barrierfree design;
  - 2. serve the needs of various demographics, cultures, interests and abilities;
  - 3. connect to the public realm;
  - 4. provide intergenerational, shared, recreational spaces;
  - 5. provide **infrastructure** to support gatherings such as adequate garbage and recycling, washing and drinking stations, electrical outlets, potable water, picnic tables, barbeques and gathering spaces.
  - 6. limit light pollution;
  - 7. provide all-season amenities;
  - foster social interaction and active living environments;
  - support connection with **nature** that promotes mental well-being and refuge from the negative impacts from urban living; and
  - **10.** anticipate and develop plans to mitigate weather extremes for user comfort year-round (e.g., shade areas or wind shelters, water fountains for drinking).

**b.** The planning and design of parks, **open** 

**space** and surrounding land uses should consider opportunities to establish and protect important vistas and views of the natural and built environments.

- **c.** Protect unique landforms and features (e.g., glacial scour, erratics).
- **d.** Development and activities on, or adjacent to waterbodies for recreational use must balance the need for activation with **preservation** of the environment and prioritize protection of drinking water.
- e. Minimize stripping and grading and avoid soil compaction and nutrient loss on lands to be provided for future parks.
- f. Parks within a neighbourhood should incorporate walking loops of different scales both within and between parks.
- g. Surface treatments and signage in parks and open space should support connectivity and accessibility to the surrounding neighbourhood.
- **h.** Seasonal **vendor commercial structures** may be provided, where feasible, when they support the recreational function of the park.

#### Figure 5.1 All Season Use of a Park

- i. Community gardens and orchards should only be permitted on **community association sites** except where public access and park provision is not negatively impacted.
- j. Support the establishment of innovative park provision such as rooftop gardens, parking lot conversion and indoor parks particularly in areas of reduced park provision.

### **Adjacent Development**

- **k.** Support the co-location of recreation facilities and community facilities with parks when those facilities complement the park function(s).
- I. Development on private property should not negatively impact the environmental health or recreational functionality of adjacent parks and **open space**.
- m. Development adjacent to parks and open space should incorporate Crime Prevention Through Environmental Design principles.
- n. The design of the interface between parks and development should be of high quality by considering active use, visual connections, landscaping, access and building design.

CHAPTER 4

### 5.3 Landscaping

Landscaping in parks creates a welcoming and visually appealing atmosphere. However, manicured grass and annual plantings are water intensive and costly to maintain. A balance needs to be reached between where naturalization should occur versus highly manicured park space. Naturalization plays a central role in building **climate resilience**, providing access to **nature** for Calgarians and reducing the operational costs of maintaining parks.

- a. All planting should comply with the City of Calgary Seed Mixes and Plant Lists and Parks Development Guidelines and Standard Specifications for Landscape Constructions, unless otherwise approved by The City.
- **b.** Planting design within parks and **open space** should prioritize **native** grasses, **native** wildflowers, meadow-type plantings and other climate resilient and drought and flood tolerant species.
- c. Support **naturalization** in all parks and **open space** where it does not interfere with the provision of **amenities** or the primary purpose of the space.

#### Figure 5.2 Naturalization Within a Park

### 5.4 Safety and Security

Ensuring personal safety in parks is a key challenge identified in Connect. Addressing park safety involves a multifaceted strategy as different parks and programs may require varied responses. Inclusive **amenities** and strategic partnerships are needed to create safer, more inviting parks and to tackle broader societal challenges.

- **a.** Education should be used over enforcement of *Parks* and *Pathways Bylaw 11M2019*.
- b. Encourage community participation and enhanced programming to address safety issues and activate local parks.
- c. Increase management or provide **amenity** improvements in parks known to have a high number of safety concerns or user conflicts.
- d. Park design should adhere to Crime Prevention Through Environmental Design principles, except where the principles conflict with environmental preservation, which takes priority.
- e. Lighting in parks and on pathways should provide accessibility and security while minimizing light pollution through the application of **Dark Sky Principles**.

- **f.** In **natural areas**, environmental protection will take precedence over lighting which should be avoided unless necessary. If lighting is permitted, it should be wildlife-friendly and comply with Appendix A.
- g. Development adjacent to parks should incorporate
  Fire Smart principles and ensure there is an adequate
  interface between development and potential fire-hazard
  natural areas (e.g., manicured buffer).
- h. Management of parks and open space that pose a wildfire risk should use environmentally sensitive management practices such as prescribed burns, grazing, haying and forest thinning.

CONTENTS
----------

### 5.5 Signage

Signage is important for **wayfinding**, appropriate park use and education and awareness of natural and cultural elements. The placement of signage requires careful consideration and balance to avoid negative visual impacts.

- a. Wayfinding signage should be provided to direct people to the **park** system.
- **b.** Parks should have welcoming, celebratory and informative entrance and exit signage.
- c. Installation of signage should be limited to essential **wayfinding** and educational signage only and leverage the use of digital aids such as QR codes.
- **d.** Signage should have inclusive and **accessible** language and content.

- e. Wayfinding and signage should be applied consistently throughout the **park system**.
- **f.** All signage should be installed and located to eliminate or minimize negative impacts to the surrounding natural environment.
- g. The content of all signage must be approved by The City.

### 5.6 Public Art

Public art offers opportunities to engage citizens, celebrate the unique places in our city, tell Indigenous stories and promote education. Art plays a crucial role in the development of a modern, vibrant city and brings awareness of the spaces we move through. It can enhance landscapes and adds texture and interest.

- **a.** All public art installations, whether permanent or temporary, must:
  - 1. prior to installation be approved by The City; and
  - 2. comply with The City's Public Art Policy.
- **b.** Public art in parks should reflect and celebrate at least one of the following:
  - 1. the natural features and ecology of the landscape;
  - 2. unique and interesting stewardship practices;
  - **3.** the sustained presence of Indigenous people on the land; or
  - **4.** the diversity, history and culture of Calgary's communities.

- c. Public art in parks should:
  - 1. enhance place-making and wayfinding;
  - consider year-round enjoyment, night design and durability;
  - 3. encourage play through physical interaction with art;
  - **4.** engage people and activate the parks with interactive elements where appropriate; and
  - 5. be self-powered.

### 5.7 Temporary Activities within Parks and Open Space

Temporary activities provide value by supporting the city's economy and offering different types of social and cultural experiences in parks. Parks support these activities, but this support must be balanced with the health of the park and access by all users. Any events or **programming** being hosted within parks spaces must comply with The City's policies.

#### **5.7.1 Events**

- a. Public events should be inclusive.
- **b.** No events, except for appropriate **level 5 events** that balance the needs of environmental protection, are permitted in or near lands that have been classified as a **natural area**.
- c. Level 5 events are permitted in parks, neighbourhood parks, sub-neighbourhood, linear parks or plazas.
- Level 2 to 4 events may be considered in parks, neighbourhood parks, sub-neighbourhood, linear parks and plazas if event organizers can prove compliance with the following:
  - 1. minimal negative impacts to the park, the environment; and
  - 2. the scale and type are appropriate for the **neighbourhood** and supporting **infrastructure**.
- e. Level 2 to 5 events are permitted in regional parks when it is determined that the:
  - 1. event balances the needs of event participants, parks users, and surrounding **neighbourhood**; and
  - 2. park has the **infrastructure** capabilities to host the event.

## **5.7.2** Professional Film and Television Production

- a. The use of parks and open space as a location for professional film and television production is supported, provided that:
  - the use is balanced with public access to parks and privacy;
  - protection of the natural environment is prioritized and the activity does not cause environmental degradation; and
  - 3. negative impacts are minimized.
- **b.** The **professional film and television production** is responsible for repair and remediation of all damage within/to the **park system**.

### 5.7.3 Vendors and Programming

- a. Vendors and programming in parks are encouraged on non-reserve land when they support recreation and sport functions and do not negatively impact environment function.
- **b.** Any damage caused within the **park system** as a result of these activities is the responsibility of the proponent.

CHAPTER 2

CHAPTER 3

CHAPTER 4

### **5.8** Access and Connectivity

**Equitable** access to parks is crucial for ensuring that all residents can enjoy the benefits of parks. The primary way in which people access and move around parks is using The City's extensive pathway and trail system. Accessibility needs to be considered under different contexts as universal access to all parks is not feasible and context specific based on the park type and function, for example **natural areas**.

#### General

 Pathway connections should be made in areas to facilitate 400 metre access to the different park functions and should be accessible by a different travel options.

### **Pathways and Trails in Natural Areas**

- **b.** Encourage innovative design elements to allow for people who experience **barriers** to enjoy elements of **natural areas**.
- c. Pathways and trail should be located and designed to mitigate negative environmental impacts and capture desire lines to reduce informal trails.
- d. Pathways and boardwalks may be considered within environmental reserve to provide public access where it is determined there will be minimal negative impacts, as per an approved Biophysical impact assessment.
- **e.** Pathway and trail design should prioritize environmental and cultural resource protection over user experience.
- **f.** Pathways and trails are not allowed on surfaces that are deemed unstable.
- **g.** Pathways and trails may be located within the floodway if they are designed to be **hydrologically invisible** on the landscape.

### **Pathways and Trails in Parks**

- h. Pathways should be designed to:
  - 1. incorporate barrier-free, universal design;
  - 2. reduce conflict between different users, by speed and areas of high-use;
  - **3.** create a contiguous network to avoid gaps which require frequent on-street **infrastructure** links;
  - 4. consider level of user comfort;
  - 5. link pathways to streets and public transit;
  - 6. create walking loops;
  - avoid creating obstacles such as sight line and visibility issues;
  - 8. include signage and wayfinding;
  - **9.** include bicycle parking at entrance points and areas of interest; and
  - 10. include seating areas.
- **k.** Where location and design considerations prevent both transportation and recreation functions from being accommodated together, the recreation function should be a given higher priority on pathways.

# Connectivity and Access for Regional Parks and Amenities

- I. Improve connections to **regional parks** and **amenities** by addressing missing walking and **wheeling** links.
- m. Major entrances to regional parks and amenities should be accessible by transit.
- Provide adequate and safe bicycle and car parking to support access while managing capacity to ensure park amenities do not become overcrowded. Where appropriate, electric vehicle charging and electric micromobility charging will be available in parking facilities.

### **5.9** Operational Actions

See Chapter 7 for details on timelines, financial impacts, and implementation.

### **Park Carrying Capacity**

- Develop and implement Visitor Management Plans for parks that are experiencing carrying capacity challenges.
- **b.** Advance methods and technologies to monitor park usage to understand historical, current and future trends to inform management plans.
- c. Complement data analysis with public insights to inform park planning and development that reflect Calgarians behaviors and preferences.
- **d.** Implement data management strategies, in partnership with other City business units, to improve transparency and accountability and minimize risks when creating plans.

### **Infrastructure Provision Standards**

- e. Develop an Infrastructure Strategic Plan.
- f. Revise and improve provisions standards that are aligned with user and operational needs in parks and along pathways for infrastructure, such as but not limited to, washrooms, benches, water fountains and garbage cans.
- **g.** Review vehicle and bicycle parking provision to assess access and coordinate solutions in partnership with other City business units.

### Landscaping

h. Where appropriate, reduce the use of water intensive, non-native annual bedding plants and hanging baskets and make **native** and drought resistant species the plantings of choice.

CHAPTER 3

- Develop an incentive program for residents and private landowners to naturalize and xeriscape yards and boulevards with drought resilient species.
- **j.** Encourage new sod methods, seed mixes and grass/cover species which are more resilient.
- **k.** Update The City of Calgary Seed Mixes Guidelines to support experimentation and **resilience** and legibility for the public and development industry.
- Work with enhanced landscape maintenance communities to promote environmentally resilient practices such as drought resistant seeding, planting **native** species, reduced irrigation and **xeriscaping**.
- **m.** Review Development Agreement parameters to incentivize leaving land in a sustainable natural state on future public lands.

### **Naturalization and Restoration**

- **n.** Provide adequate staff to support the identification and prioritization of land opportunities for naturalization.
- **o.** Revise the restoration target for the **park system** in consultation with other City business units and in alignment with federal and global targets.
- p. Naturalize underutilized manicured areas within the park system.
- **q.** Existing manicured utility right-of-ways should be targeted for naturalization where feasible and in collaboration with the utility owner.
- **r.** Develop design standards for naturalization and improve restoration standards.
- Improve data tracking and identification to support management of **natural areas** and naturalized space.

### **Safety and Security**

- t. Collaborate with other City business units along with social outreach partners, Calgary Police Service, and other agencies to develop a strategy to address safety for park users with a focus on helping people experiencing vulnerabilities and addressing encampment issues within parks.
- u. Explore adding dedicated bylaw officers for parks.

### **Communication and Education**

- v. Develop a communications strategy for Parks and Open Spaces ensuring information is **accessible**, multilingual, transparent, accountable and customer-oriented for the various media platforms.
- w. Enhance education programs on:
  - the importance of biodiversity, urban conservation, urban forestry and the benefits of the park system to climate adaptation and climate mitigation;
  - 2. wildlife safety;
  - **3.** the cultural and/or historical significance of the park where appropriate;
  - 4. park locations, amenities and programs;
  - 5. appropriate park usage and safety; and
  - 6. park programming and events.
- **x.** Maintain and enhance relationships with park users and the community to encourage advocacy and stewardship of the park system.
- y. Develop an ongoing feedback loop of public engagement, research and community outreach that helps to inform decision making on development and management of the **park system**.
- z. Develop citizen science programs for The City in partnership with other City business units, and support existing programs that promote **biodiversity** and urban ecology goals through the generation of information and engagement of the public on urban ecological issues.
- **aa.** Provide effective booking systems that are fast, reliable, informative, flexible and customer focused.

# **Chapter 6** Development Connections: Utilities and Infrastructure

### **6.1 Introduction**

The **park system** is made up of primarily unencumbered land and is therefore a desirable location for different types of **infrastructure** and utilities. These are important components that support Calgarians needs, for example, irrigation systems are essential for healthy park maintenance and can be used to support stormwater targets. Underground utilities can also have a negative impact on the functioning of the **park system** from limiting tree growth and space for planting to recreational activities. It is therefore important that there is clear direction on when and where utilities and **infrastructure** can be located in the **park system**.

### **Outcomes**

- Parks are vibrant spaces that provide a wide range of opportunities for celebration, community gathering, activities and relaxation.
- Parks are safe spaces where users feel comfortable.
- People of all ages and abilities have opportunities to enjoy and access parks.
- Parks are easy to locate and information about them is easily accessible.
- Innovative park design addresses the complexities of user and environmental needs.

### **6.2** Infrastructure, Utilities and Irrigation

Infrastructure and utilities are necessary elements to support city growth. Often these elements, while required, can encumber and limit available space for planting in parks, roadside greens and boulevards. These impacts should be minimized whenever possible. The location and type of infrastructure and utilities dictates where and when they may be allowable.

### Strategic directions this chapter align to:

**Economic** Resilience

Innovation

CONTENTS

#### **Policies**

### **Stormwater Infrastructure**

- **a.** Support **green stormwater infrastructure** as the preferred option in parks and **open space**.
- **b.** Stormwater infrastructure within a park should not interfere or negatively impact park **amenities** and function.
- c. Evaluate and promote the use of innovative and effective techniques for water sensitive urban design, such as rain gardens, bioswales, underground storage reservoirs and biofilters.
- **d.** Support innovation that incorporates new technologies to enhance permeability of hard surfaces.
- e. Dry ponds proposed within municipal reserve lands may be considered but are required to demonstrate the public benefit beyond the singular purpose of a utility.
- **f.** Stormwater **dry ponds** shall be no more than 33 per cent of the total reserve dedication of a community.
- **g.** A stormwater **dry pond** may receive 100 per cent reserve credit where located on reserve lands, provided that the reserve lands meet all City planning criteria for location,size and purpose and the reserve purpose is not prejudiced.
- **h.** Naturalization within **public utility lots** should be prioritized.
- i. Stormwater ponds should incorporate a planting design applicable to an aquatic landscape and its abutting uplands.
- **j.** Hard engineering infrastructure within **natural areas** should not be permitted.
- k. Paved pathways should be provided around the perimeter of all stormwater ponds in retrofit scenarios and are encouraged in new development to provide a public amenity.
- I. Paved pathways should be provided around the perimeter of all stormwater ponds in retrofit scenarios and are encouraged in new development to provide a public amenity.

### Drainage

- **j.** Overland drainage may be permitted into parks and **open space**, except when it:
  - 1. crosses a pathway;
  - 2. enters an ecologically sensitive or cultural landscape;
  - 3. negatively impacts the amenities and use of a park; or
  - 4. causes erosion or slope instability.
- **k.** Overland drainage should be designated as an overland drainage right-of-way.
- I. Point source drainage is not permitted into **park system**.

#### Utilities

- m. Deep utilities should not be permitted in parks, except when water or sanitary services are required for park amenities.
- n. Shallow utilities may be considered in parks if there is no other alternative location and there is no negative impact to park **amenities** or usage.
- o. Utility infrastructure in natural areas should be avoided.
- **p.** Cellular towers or wind energy conversion systems should not be located on or adjacent to **natural areas**.
- **q.** Renewable energy infrastructure may be permitted in the **park system** if it does not negatively impact the recreational function or environmental protection.

66 CONNECT: Calgary's Parks Plan
CHAPTER 6

#### Irrigation

- **r.** Support the use of alternative water sources for irrigation, where feasible, to reduce potable water use.
- s. Irrigation systems are only permitted in parks over 0.4 hectares.
- t. Irrigation designs that are sourced by potable water do not require full park coverage except for **playfields**.
- **u.** Where no irrigation is provided **xeriscaping** or naturalized landscaping is encouraged.
- **v.** Temporary irrigation systems for establishment of parks may be permitted.
- w. Neighbourhood parks and sub-neighbourhood parks do not require full irrigation coverage on turf areas unless it is a playfield or necessary to meet stormwater targets for grey water.

- x. Decommission irrigation systems in existing parks less than 0.4 hectare when economically feasible, or during redevelopment where usage statistics support decommissioning.
- **y.** When installing new irrigation in parks, or during lifecycle upgrades, priority should be given to areas of high wear, high plant stress and high drought sensitivity. As per the following hierarchy:
  - 1. **playfields** and high wear areas (e.g., concert and events areas);
  - 2. trees and shrub beds; and
  - 3. annual planting beds, dependent on park type.
- **z.** Plant material not listed in the hierarchy under 6.1.27 should not be irrigated.

## **6.3** Operational Actions

See Chapter 7 for details on timelines, financial impacts, and implementation.

#### Irrigation

- **a.** Establish standards and requirements for water re-use and non-potable water use.
- **b.** Review and update the Water Management Strategic Plan.
- c. Set new targets and develop standards in the *Water Management Strategic Plan*, in partnership with other City business units, to reduce irrigation and the use of potable water.
- **d.** Remove the requirement for irrigation in parks that do not require it for long term use.
- e. Remove redundant irrigation **infrastructure** in parks being redeveloped.

CHAPTER 3

CHAPTER 4

## 7.1 Implementation

Connect recognizes the value and importance of Calgary's **park system** as a vital asset that significantly contributes to the quality of life, environmental health and social cohesion of the city. Implementing Connect is a crucial step toward building and enhancing this system, ensuring that it aligns with the *imagineParks Strategic Plan* vision — that Calgary's parks and **open space** are cherished places that connect us to **nature**, our heritage and one another. This chapter highlights Connect's key metrics to measure policy success and implementation measures for its operational actions, which will guide Calgary's parks planning and decision-making.

Expanding and enhancing the **park system** to serve both current and future populations is an essential task that will require collaboration and coordination. While Parks & Open Spaces will lead these efforts, implementing the operational actions will also require input and expertise from various City business units.

Moreover, the development industry has a significant role in implementing Connect. By working alongside The City, developers and the private sector can help build a **park system** that not only complements new and existing neighborhoods but also contributes to the overall **sustainability** and **resilience** of neighbourhoods. This collaboration will be pivotal in delivering a **park system** that is both robust and adaptable, capable of serving the community's evolving needs for generations to come.

## 7.2 Plan Review and Monitoring

Regular reviews of Connect will allow The City to evaluate changes impacting the **park system** and adjust policies and operational actions if necessary. This will ensure that Connect remains relevant over time. Connect should be reviewed and amended every three years to incorporate administrative updates, emerging trends, implementation progress and policy gaps.

To assess the effectiveness of Connect and its ongoing implementation, metrics have been identified to monitor progress. These metrics will be tied to reviews of Connect and included in progress reporting. Figure 7.1 outlines metrics that have been grouped based on Connect's ten strategic directions and will guide its monitoring and review process.

CONTENTS	CHAPTER 1	CHAPTER 2	CHAPTER 3	CHAPTER 4

#### Figure 7.1 Metrics to Measure Success

Principle	Metric	Current	Target
<b>Conservation and</b>	Total area of land restored in the <b>park system.</b> *	441 hectares (2024)	1,000 hectares by 2035
Protection of the Environment	The number of <b>natural areas</b> with a Habitat Condition Rating (HCR) of natural GOOD or EXCELLENT.*	68 (2024)	Maintain or increase
	Number of <b>natural areas</b> with Habitat Management Plans.	15 in progress/ complete (2024)	65 in progress/ complete by 2035
	Number of trees planted annually on public land.*	84,447 (2024)	1.3 million by 2035
	Per cent of public land covered by tree canopy.*	12.26% (2024)	15% by 2035
*Climate Resiliency			
Any metrics with an a	strix apply to Climate Resilience.		
Inclusivity and Accessibility	Per cent of communities that have 2 ha of local park space per 1,000 people.	69%	Maintain or increase
	Per cent of communities that have 1 ha (local and regional park space) in the Greater Downtown per 1,000 people	67%	Maintain or increase
	Number of inclusive playgrounds.	21 (2024)	40 by 2035
Connectivity for People and	Per cent of households that are within a 400 metre pedestrian trip to a multifunctional park.	2% (2024)	67% by 2035
Wildlife	Per cent of households that have access to regional parks within 5 km.	79% (2024)	90% by 2035
	Number of projects initiated with the target of enhancing connectivity for wildlife.	4 (2024)	10 by 2035
Physical and Mental Health and	Per cent of Calgarians who have spent 20 minutes or more in a park without snow.	93% (2024)	Maintain or Increase
Wellbeing	Per cent of Calgarians who have spent 20 minutes or more in a park with snow.	83% (2024)	85% by 2035
	Per cent of households within 400 metres of an environmental function.	29% (2024)	34% by 2035
	Per cent of households within 400 metres of a sports function.	59% (2024)	64% by 2035
	Per cent of households within 400 metres of a recreation function.	84% (2023)	89% by 2035
Support Communities	Per cent of regional parks that have a Customer Level of Service (CLOS) rating of at least 2.0, and a rating of at least 3.0 for local parks.	52% (2023) (regional parks) 94% (local parks)	100% by 2035
Cultural Landscapes	Number of completed, Nation authored and Nation specific, Traditional Land Use studies for Calgary's park land.	2	4 by 2030
	Per cent of archaeological resources conserved within the park system in new community development.	Unknown	>10% by 2035
	Per cent of known cultural landscapes legally protected.	<30% (2024)	Increase 5% annually by 2035
	Number of public tours given annually to provide education on cultural landscapes.	3 (2024)	10 by 2035
Safety and Security	Per cent of people that feel safe visiting parks regardless of ethnicity, race, religion, income, gender identity or sexuality.	56% (2024)	60% by 2035

CHAP	TER 5
------	-------

CHAPTER 7

Principle	Metric	Current	Target		
Economic Resiliency	Area of manicured turf naturalized.* (sub-target of land restored)	2 hectares (2024)	200 by 2035		
	Percent of parks with irrigation systems under 0.4 hectares.	Pending	100%		
Innovation	Innovation is challenging to quantifiably measure as innovation is included into everyday operational practice and planning. Additionally some innovative focused projects can take years come to fruition while others can be completed in a shorter timeframe. Therefore, a qualitative update of innovative projects and practices pwill be provided to Council as part of the three year reviews of Connect.				

## 7.3 Operational Actions

The following tables outline details for implementing Connect's operational actions, including their timeline, progress and financial impacts. These actions align with and support Connect's policies, aiming to incorporate economic, social and environmental **resilience** into the **park system's** maintenance and operations to ensure consistent levels of service and value for citizens.

Each operational action has been assigned the following descriptors:

- Timeframe short-term (1-10 years), medium-term (10-20 years), long-term (20-30 years) or ongoing;
- Current Status not started, in development, in progress or complete;
- Budget low (under \$1M), moderate (\$1-10M), or high (over \$10M); and
- **Priority** low, medium, high.

Budget estimates are provided as a guide to better understand the approximate scale of investment. Further work to refine the estimates is required as each action is implemented based on Council approval over the lifetime of Connect. Council approval of actions and budget are discretionary and not tied to the approval of this plan. CONTENTS

## 7.4.1 Connecting with The Ecological Network, Urban Forest and Cultural Landscapes Citywide

#### **Ecological Network**

Protection and enhancement of the **ecological network** supports environmental **conservation**, resulting in a city that is climate resilient with healthy, well-connected habitats. Through the reintroduction of **native** plant species, naturalized spaces provide benefits including a greater ability to respond to extreme weather and climate change events, potential for lower maintenance costs, the creation of **habitat** for urban wildlife and creating new spaces for people to connect with **nature**.

Action	Timeline and Progress	Financial Impacts	Implementation Lead	Priority Level
3.5				
a. Develop and implement a strategy for naturalization	Long Term	High	Parks & Open Spaces	High
on City-owned land within the <b>ecological network</b> .	Not Started		Climate & Environment	
Total Financial Impact		\$10 + M		

#### **Urban Forest**

Calgary's **urban forest** is a critical element in supporting healthy, beautiful and livable communities. It enhances residents' well-being, supports **climate resilience**, provides **habitat** for wildlife and helps mitigate the effects of urban heat islands. By expanding, protecting and enhancing the **urban forest**, these benefits are further amplified.

Action	Timeline and Progress	Financial Impacts	Implementation Lead	Priority Level
3.5				
<b>b.</b> Establish a cross departmental committee to focus expanding the <b>urban forest</b> and provide adequate staff to support the committee and coordinate the implementation fidentified actions.	Ongoing In Development	Low	Parks & Open Spaces Urban Forestry	High
c. Increase investment and prioritize planting, in collaboration with other business units, in areas of Calgary with growing limitations to address tree inequity.	Ongoing In Development	Low	Parks & Open Spaces Urban Forestry	High
<b>d.</b> Deploy a public measurement tool to assess and report on tree <b>canopy</b> coverage and <b>equity</b> .	Ongoing In Development	Low	Parks & Open Spaces Urban Forestry	Medium
e. Plant 1.3 million trees on public land over the next ten years.	Short Term In Development	High	Parks & Open Spaces Urban Forestry	Medium
Total Financial Impact		\$13 + M		

#### **Cultural Landscapes**

Calgary's **cultural landscapes** are lands of cultural and historical significance that offer spaces to connect with our past and celebrate a rich and diverse cultural identity. The **park system** plays a crucial role in protecting lands significant to Indigenous peoples, as well as those with historical or archaeological importance. These areas are sensitive to human impact and development, requiring protection and management to ensure that these places are preserved and honoured.

Action	Timeline and Progress	Financial Impacts	Implementation Lead	Priority Level
3.5				
<ul> <li>Provide adequate staff to support the identification, conservation and celebration of cultural landscapes.</li> <li>Provide operational and cross-corporate to support, track and report on progress.</li> </ul>	Ongoing In Progress	Low	Parks & Open Spaces Cultural Landscapes	High
<b>g.</b> Co-create a Guiding Circle to address and advise on the management of the <b>park system</b> .	Ongoing In Progress	Low	Parks & Open Spaces Cultural Landscapes	Medium
<b>h.</b> Finalize an Archaeological Resources Framework.	Ongoing In Development	Low	Parks & Open Spaces Cultural Landscapes	Medium
i. Establish and utilize a <b>cultural landscape</b> dataset.	Medium Term Not Started	Low	Parks & Open Spaces Cultural Landscapes	Low
<b>j.</b> Develop guidelines for the education and interpretat of <b>cultural landscapes</b> for children that are aligned with the Alberta Education curriculum.		Low	Parks & Open Spaces Cultural Landscapes	Low
Total Financial Impact		≈ \$5 M		

#### 7.4.2 Connecting Neighbourhoods to Parks

#### **Park Provision**

Balancing maintenance needs with investment is essential for effectively managing and growing the **park system**. Data plays a crucial role in assessing maintenance and investment costs across the city. While existing data is extensive in scope, its current structure makes it difficult to analyze, complicating efforts to determine whether management practices and capital investments are being equitably distributed across communities.

Maps 8 and 9 illustrate the average estimated spending across communities over the past ten years. Due to the unique requirements of **Greater Downtown**, it stands as a significant outlier in spending per hectare and should not be averaged with the rest of the city. Areas shown in yellow are currently receiving below the benchmark, light orange areas are at the benchmark and dark orange areas are above the benchmark. This provides a snapshot of where additional investment is needed.

To ensure a truly **equitable** approach, it is vital to include engagement with the public. Their insights and perspectives are invaluable in guiding decisions that reflect the needs and values of all community members. Collaborative efforts will help ensure that the **park system** is managed in a way that honors cultural heritage, respects diverse voices and meets the needs of current and future generations.

**DRAFT: FOR ENGAGEMENT PURPOSES ONLY** 

CONTENTS	CHAPTER 1	CHAPTER 2	CHAPTER 3	CHAPTER 4

Action	Timeline and Progress	Financial Impacts	Implementation Lead	Priority Level
4.10				
a. Develop a master plan to identify capital investment and address gaps and development needs.	Short Term Not Started	Low	Parks & Open Spaces Business & Policy Planning; Infrastructure Services Public Spaces Delivery	High
<b>b.</b> Include community engagement, where appropriate, at all stages of park development and management from planning, designing, <b>programming</b> and operating to ensure parks are reflective of demographic and cultural needs.	Ongoing In Development	Moderate	Parks & Open Spaces	High
<b>c.</b> Develop a strategy to identify locations for fenced off-leash <b>dog areas</b> .	Short Term Not Started	Low	Parks & Open Spaces Business & Policy Planning	Medium
Total Financial Impact		\$3-12 M		

#### Land and Regional Park and Amenity Management

The management of the **park system** can be evaluated using the Customer Level of Service (CLOS) tool. Originally developed in 2010, this tool establishes specific criteria for assessing park management from a customer perspective. The framework was reviewed and updated in 2021 to align with the *imagineParks Strategic Plan*, setting a standard level of service that ensures equal service delivery across the city. The tool allows communities to measure and understand a standard level of service.

Managing parks is a complex task, often influenced by political and community pressures, which can lead to inconsistencies in management and maintenance. Currently, not all parks meet their Customer Level of Service targets as shown in Map 10. However, more effective monitoring and reporting will enable the City to better direct resources and investments for equitable maintenance.

An additional layer of analysis is provided by assessing the condition of park assets, as shown in Map 9. As parks **infrastructure** ages, maintenance costs increase, which contributes to lower CLOS scores. The **infrastructure** funding gap identified in the *2022 Corporate Asset Management Plan* for parks, pathways, trails and other parks infrastructure is currently \$793 million. Currently there is insufficient funding to address this gap.

A combined analysis of Customer Level of Service scores, community maintenance costs per hectare and asset condition ratings will enable The City to better prioritize future investments. In the past, decisions on the development and redevelopment of parks have been based on requests made by the public, donation or partnerships. To ensure **equitable** investment, future decision-making needs to be guided by accurate data and rigorous analysis.

CHAPTER 7

Action	Timeline and Progress	Financial Impacts	Implementation Lead	Priority Level
4.10				
<b>d.</b> Utilize the Customer Level of Service tool to assess that 100 per cent of park types meet a defined standard level of service by 2035.	Ongoing In Development	Low	Parks & Open Spaces Business & Asset Strategies	High
e. Complete an annual report and assessment of Customer Level of Service metrics to address deviations in the targets set by <i>imagineParks Strategic Plan</i> .	Short Term Not Started	Low	Parks & Open Spaces Business & Asset Strategies	Medium
<b>f.</b> Provide administrative and educational support to City staff responsible for park maintenance annually to carry out the Customer Level of Service tool review of park types in their zones.	Ongoing In Development	Low	Parks & Open Spaces Business & Asset Strategies	High
<b>g.</b> Update the Customer Level of Service tool every five years to ensure all categories are relevant.	Short Term Not Started	Low	Parks & Open Spaces Business & Asset Strategies	Medium
<b>h.</b> Use data and innovative practices to evaluate mowing and improve operational efficiency.	Short Term In Development	Low	Parks & Open Spaces Business & Asset Strategies	Medium
<ul> <li>Ensure all City staff and contractors responsible for park maintenance have completed the required safety training and protocols.</li> </ul>	Ongoing In Progress	Low	Parks & Open Spaces	High
j. Collaborate with other City business units to develop an investment prioritization tool for park redevelopment based on maintenance levels, asset condition ratings, significance, usership and equity.	Short Term Not Started	Low	Parks & Open Spaces	Medium
k. Develop an equity framework, in partnership with other City business units, to evaluate a citywide level of service as an additional layer to the Customer Level of Service tool.	Short Term Not Started	Low	Parks & Open Spaces	Medium
<ol> <li>Establish accreditation as a member of the Audubon Cooperative Sanctuary Program for <b>public golf courses</b>.</li> </ol>	Medium Term Not Started	Moderate	Parks & Open Spaces Golf Course Operations	Low
<ul> <li>Establish an equity fund to provide additional maintenance, capital investment and servicing to equity deserving communities.</li> </ul>	Short Term Not Started	High	Parks & Open Spaces Business & Policy Planning	Medium
<ul> <li>Investigate how community food assets such as community gardens, farm stands and markets could be integrated into the <b>park system</b>.</li> </ul>	Short Term Not Started	Low	Parks & Open Spaces Business & Policy Planning; Climate & Environment	Medium
Total Financial Impact		\$21-40 M		

#### **Playfield Management**

Parks and Open Spaces is responsible for maintaining Class D sports fields (playfields), cricket fields, tennis courts and other sports surfaces. These **amenities** provide affordable access to recreation and sport that contributes to the health and well-being of Calgarians. Although playfields and surfaces make up only 20 per cent of park types, they require significant operational costs to maintain. The City is committed to keeping these **amenities** affordable and **accessible** to all residents.

There is, however, an increasing gap between the revenue generated from fees and rising maintenance costs. Expanding budgets to cover this shortfall without compromising service levels is not feasible. While full cost recovery is not the goal, it is essential to adjust fees in line with inflation and expected service levels. The issue is further complicated by the practice of field over-bookings, where sports groups reserve more time than needed to maintain historical rights or account for potential weather disruptions. This leads to inaccurate data for resource allocation and restricts access for emerging or growing sports organizations.

The City's Customer Level of Service review highlights inequities, with some sports fields being maintained at higher standards than others. To ensure fair access, The City aims to match the right user groups with the right fields at the right times, thereby improving accessibility and **equity** in sports opportunities.

As recreational trends evolve, there is an opportunity to support new and emerging sports, ensuring fair and **equitable** access. This approach should be guided by data analysis and community engagement to understand the impacts and potential displacement of existing user groups.

Action	Timeline and Progress	Financial Impacts	Implementation Lead	Priority Level
4.10				
<b>o.</b> Complete an allocations and permitting process review to reduce blanket bookings by user groups and develop a fair and <b>equitable</b> allocation system which can be processed in a timely manner.	Ongoing In Progress	Low	Parks & Open Spaces Community Parks Initiatives	High
p. Develop and implement standardized maintenance practices for <b>playfields</b> based on the class of field to set clear maintenance expectations among user groups.	Ongoing In Development	Low	Parks & Open Spaces Community Parks Initiatives	High
q. Collaborate with public school boards to support increased maintenance on Class E fields to expand their standard to a Class D.	Med Term Not Started	Low	Parks & Open Spaces Community Parks Initiatives	Medium
<ul> <li>Collaborate with public school boards to add High School fields not currently in the booking system to increase public availability.</li> </ul>	Short Term Not Started	Low	Parks & Open Spaces Community Parks Initiatives	Medium
s. Increase standard of maintenance to Class D fields to create a Class D+ fields to better support a greater range of use for different skill levels.	Med Term Not Started	Moderate	Parks and Open Spaces Community Parks Initiatives	Low
t. Increase capacity to process field permits and address 311 inquiries quickly and efficiently.	Short Term Not Started	Low	Parks & Open Spaces Customer Service & Communications	High
<b>u.</b> Pilot emerging sports on existing sport surfaces, and design future sport surfaces to support multiple sports.	Ongoing In Progress	Moderate	Parks & Open Spaces Community Parks Initiatives	Medium
Total Financial Impact		\$8-26 M		

#### **Natural Areas Management**

**Natural areas** require different management practices compared to manicured parks and **playfields**. These areas provide significant benefits in **climate resilience**, urban health and public well-being, making it crucial to invest in their enhancement and maintenance. The current operational costs of **natural areas** requires review, as does capital investment in restoration and **conservation** practices to ensure the continued health of these parks and the sustainment of the **ecological network**. With guidance from recently developed national tools for natural asset inventory and management planning, The City is working to capture and report natural infrastructure funding needs and resources.

Action	Timeline and Progress	Financial Impacts	Implementation Lead	Priority Level
4.10				
v. Assess and update the cost of maintenance to preserve the value of <b>natural areas</b> .	Short Term In Development	Low	Parks and Open Spaces Urban Conservation	High
<ul> <li>w. Develop and implement a compensation model for damage or loss of natural areas.</li> </ul>	Short Term In Development	Low	Parks & Open Spaces Urban Conservation	High
<ul> <li>x. Develop 10-year, operational Habitat Management</li> <li>Plans for all natural areas.</li> </ul>	Med Term In Progress	Moderate	Parks & Open Spaces Urban Conservation	Medium
y. Allow litter control only management with guidance, in <b>natural areas</b> to be included in Enhanced Landscape Maintenance requirements.	Short Term Not Started	Low	Parks & Open Spaces Urban Conservation; Community Parks Initiatives	Medium
Total Financial Impact		\$4-23 M		

#### **Funding Parks**

The City's *Municipal Development Plan* identifies targets to direct growth within established areas. However, there is currently no consistent funding mechanism for acquiring, developing and redeveloping parks in these areas, apart from partnerships and one-time funding programs. Additionally, data shows that maintenance costs per hectare significantly increase with higher population densities. In growth areas, the costs of transportation, utility and recreation **infrastructure** are partially addressed through offsite levies. Parks, natural areas and open space are not yet recognized as essential infrastructure and, as such, lack a consistent funding mechanism for upgrades to the existing **park system**. To support growing communities and maintain quality of life, it is crucial that the **park system** be treated and funded as essential infrastructure, similar to other key services.

CONTENTS	CHAPTER 1	CHAPTER 2	CHAPTER 3	CHAPTER 4

Act	ion	Timeline and Progress	Financial Impacts	Implementation Lead	Priority Level
4.1	0				
z.	Establish a <b>sustainable</b> funding source for park development, redevelopment and management in established areas such as neighbourhood renewal program, redevelopment levies or dedication of a portion of the mill rate to Parks and Open Spaces.	Med Term Not Started	Low	Parks & Open Spaces	Medium
aa.	Explore alternative management models such as land trust, conservancies and Indigenous partnerships.	Med Term Not Started	Low	Parks & Open Spaces	Low
bb.	Develop a process to utilize funding such as, but not limited to, the Established Areas Investment Fund, Legacy Fund, Equity in Service Delivery Fund to address provision gaps prioritizing <b>equity</b> <b>deserving communities</b> , areas of high utilization and parks with poor asset condition ratings.	Short Term Not Started	Low	Parks & Open Spaces	Medium
cc.	Continue to leverage provincial and federal funding to support gaps in park provision.	Ongoing In Progress	Moderate	Parks & Open Spaces	High
dd.	Continue to support partnerships that can address provision gaps with prioritization of projects such as addressing <b>barriers</b> for <b>equity</b> deserving groups.	Ongoing In Progress	Moderate	Parks & Open Spaces Activations & Education	High
Tota	al Financial Impact		\$5-23 M		

#### Supporting Neighbourhood Stewardship and Volunteerism

Supporting community members to take stewardship of their parks and **open space** fosters a sense of ownership and pride while allowing City staff to focus on neighborhoods with lower volunteer levels. This approach aims to support stewardship and community-driven programming, leading to more **equitable** maintenance and management, especially where resources are limited. Civic participation also increases government transparency and builds community trust.

The City values these collaborations and, through the *imagineParks Strategic Plan*, recognizes the significant contributions made by residents, organizations and businesses. To acknowledge and measure these efforts, *imagineParks Strategic Plan* has set a target dedicated to highlighting the work of these collaborators.

Parks and Open Spaces currently supports stewardship through several initiatives, including the Enhanced Landscape Maintenance Program (ELM), Adopt-a-Park, Branching Out Program, Pathway River Cleanup and Green Initiatives. While these programs offer significant benefits, they also come with risks that need to be managed, such as:

- Work may not align with The City's standard level of service.
- Results may be inconsistent.
- Resident expectations for service levels may increase.
- Inequity may arise due to varying abilities of Calgarians to participate.
- A lack of expertise may hinder environmental goals, such as water conservation or avoiding invasive species.
- Increased staffing costs for administration and monitoring may be needed, especially with program expansion.

Act	ion	Timeline and Progress	Financial Impacts	Implementation Lead	Priority Level
4.1	0				
ee.	Create and implement a volunteer and partnership assessment tool in alignment with <i>imagineParks</i> <i>Strategic Plan</i> to ensure effectiveness and value for Calgarians.	Ongoing In Progress	Moderate	Parks & Open Spaces Activations & Education	High
ff.	Create a framework of standards and a training program for volunteers.	Short Term In Progress	Low	Parks & Open Spaces Activations & Education	Medium
gg.	Work with Enhanced Landscape Maintenance communities to promote environmentally resilient practices such as drought resistant seeding, planting <b>native</b> species, reduced irrigation and <b>xeriscaping</b> .	Ongoing In Development	Low	Parks & Open Spaces Community Parks Initiatives	Medium
hh.	Increase community-based efforts to engage youth and <b>equity</b> deserving groups in volunteer initiatives which address their needs and <b>barriers</b> to participation.	Ongoing In Development	Moderate	Parks & Open Spaces Activations & Education	High
ii.	Develop a strategy and standardized process to evaluate requests for enhanced or non-standard <b>amenities</b> which considers <b>equity</b> and long-term financial <b>sustainability</b> for The City.	Short Term In Development	Low	Parks & Open Spaces Business & Policy Planning	High
jj.	Establish and sustain a city-wide community volunteer group that can enhance levels of service in <b>equity deserving communities</b> .	Ongoing Not Started	Moderate	Parks & Open Spaces Activations & Education	Medium
kk.	Build capacity in <b>equity deserving communities</b> using the citywide volunteer group to mentor and support those communities.	Ongoing Not started	High	Parks & Open Spaces Activations & Education	High
II.	Expand volunteer programs, such as Adopt-a-Park and Green Initiatives, and ensure programs meet City and community needs.	Ongoing In Progress	High	Parks & Open Spaces Activations & Education	Medium
mm	Advance Calgary becoming a National Park City.	Short Term Not Started	Low	Parks and Open Spaces Business and Policy Planning	Medium
Tot	al Financial Impact		\$27-54 + M		

#### 7.4.3 Connecting People to Parks

#### **Park Carrying Capacity**

**Park carrying capacity** refers to the maximum level of activity that can be reasonably or sustainably managed within a given space. For the **park system**, this concept can apply to ecological **carrying capacity**, visitor capacity or facility capacity. Determining a park's **carrying capacity** is essential for managing spaces that are overused, leading to a diminished visitor experience and increased maintenance needs.

Currently, issues of overuse or misuse are often addressed by raising operational budgets, which may offer short-term relief but fail to address the underlying problems. To better manage these challenges, a **Visitor Management Plan** can be developed using a management-by-objective framework. These plans use a combination **park carrying capacity** and park utilization data to identify and address site-specific issues in a more strategic and tailored manner, rather than relying on blanket spending increases. The resulting management framework helps pinpoint specific actions and capacities for the park based on environmental, social and economic factors.

CON		-
		- 1

Action	Timeline and Progress	Financial Impacts	Implementation Lead	Priority Level
5.9				
a. Develop and implement Visitor Management Plans for parks that are experiencing carrying capacity challenges.	Med Term Not Started	Moderate	Parks & Open Spaces Business & Policy Planning	Medium
<b>b.</b> Advance methods and technologies to monitor park usage to understand historical, current and future trends to inform management plans.	Short Term In Development	Moderate	Parks & Open Spaces Business & Policy Planning	High
c. Complement data analysis with public insights to inform park planning and development that reflect Calgarians behaviors and preferences.	Ongoing In Development	Low	Parks & Open Spaces Business & Policy Planning	High
<b>d.</b> Implement data management strategies, in partnership with other City Business Units, to improve transparency and accountability and minimize risks when creating plans.	Ongoing In Development	Low	Parks & Open Spaces Business & Policy Planning	Medium
Total Financial Impact		\$4-22 M		

#### **Infrastructure Provision Standards**

Park **infrastructure** is crucial for the comfort and enjoyment of park users, offering **amenities** such as seating for rest, washrooms and water fountains for physical comfort. The current **infrastructure** in parks needs to be reviewed and updated to ensure user needs are met, longer visits are encouraged and accessibility is improved.

Action	Timeline and Progress	Financial Impacts	Implementation Lead	Priority Level

#### Landscaping

Landscaping in parks, **boulevards** and other **open space** creates visually appealing and welcoming spaces. However, manicured grass and annual plantings are water-intensive and costly to maintain. To address these challenges, it's important to strike a balance between areas that should be naturalized and those that require highly manicured spaces.

Naturalization not only reduces operational costs but also plays a key role in building **climate resilience** and providing Calgarians with greater access to **nature**. Incorporating resilient seed mixes, **xeriscaping** techniques and innovative sod methods can further enhance this approach. These strategies reduce water usage, lower maintenance costs and contribute to the overall **sustainability** of the **park system** while still offering attractive and functional park spaces.

CONTENTS

#### **Naturalization and Restoration**

The current model of developing large areas of manicured, non-native parks and **open space** is unsustainable. Increasing the amount of naturalized space in the city improves operational **sustainability** and ensures the economic **resilience** of the **park system**. Figure 7.2 compares the current cost of operating **natural areas** to that of managing other park types, illustrating that the cost of maintaining **natural areas** is significantly lower.

The *Our BiodiverCity* plan sets a target to restore 20 per cent of Calgary's **open space** by 2025, recognizing the public, environmental, and economic benefits of natural parkland. However, only about half (53 per cent) of this target has been achieved so far, primarily due to a lack of dedicated funding for naturalization. To meet this target, significant investment is needed in **preservation**, restoration, naturalization and environmental education initiatives. Achieving this will require collaboration with other City business units and private landowners.

Establishing a standard level of naturalization and changing landscaping standards for parks and **open space** can yield a return on investment in ten years or less, primarily due to reduced maintenance costs, particularly in watering and mowing. Figure 7.3 illustrates the return on investment when comparing the maintenance costs of naturalized spaces to those of manicured turf.

CHAPTER 5	CHAPTER 6	CHAPTER 7	APPENDIX A	GLOSSARY

#### Figure 7.2 Operational Costs of Maintaining Parks

#### Figure 7.3 Managed Parks and Open Spaces

This conceptual diagram illustrates how resource inputs generally change over time for parks and open spaces that are manicured versus naturalized.

Diagram provided for general illustrative purposes only; actual changes in resource input over time will vary depending on site conditions and details of the specific project.

Although a large initial resource input may be required to create a naturalized space, the resource inputs are generally reduced over time as the landscape becomes more established. The initial resource input typically occurs in the first two years. Resource inputs include the financial cost and energy necessary to facilitate actions like reseeding, planting, weed control, site maintenance and monitoring.

#### **Communication and Education**

Effective communication is essential for ensuring that Calgarians have access to information about Calgary's parks and the **amenities** they offer. It helps people better understand the experiences, events and history associated with parks, as well as the rules for their use. Additionally, good communication fosters stewardship and raises awareness of **natural areas** and their importance to the city's **resilience**.

#### 7.4.4 Utilities and Infrastructure

Irrigation helps keep parks beautiful and healthy, but irrigating all parks is unsustainable. Previous policies required irrigation systems in all parks; however, longer and more frequent drought conditions, combined with limited operational budgets, have made this approach both impractical and environmentally irresponsible.

Strategic management of irrigation systems is crucial for the long-term **conservation** of potable water resources. By targeting irrigation to the most heavily used park spaces, these spaces can remain healthy and support recreation and sports while reducing the overall need for irrigation across the city.

# Appendix A Natural Area Park Types, **Management and Use** Guidelines

### Introduction

This appendix provides a classification with functional categories that guide the conservation, management and use of **natural areas** (formerly known as natural environment parks). Calgary's natural ecosystems are also categorized by their habitat type (e.g., grassland, forest, wetland) and by how they contribute to the overall natural system (i.e., the ecological network as shown in The City's *Municipal Development Plan*). At the individual park level, **natural areas** are categorized to provide guidance for management practices and permitted usage according to habitat sensitivity and conservation needs.

## Categories

The following criteria are guidelines for classifying parks containing natural environments into one of four categories:

#### **Natural Areas**

- 1. Special Protection
- 2. Major
- 3. Supporting

#### Other

4. Other parks with natural environments and areas that have been naturalized.

#### **Table 1** Categories and Descriptions of Natural Areas

	Special protection natural area	Major natural area	Supporting natural area	Other parks with natural environments and naturalized area
Habitat Sensitivity	High	High to Moderate	Moderate to Low	Variable
Environmental Significance	Provincial/Regional	City/Regional	Local and/or Supportive	Variable
Wildlife Resources	Provides temporary or permanent resources for breeding, feeding, shelter and movement for various species.	Provides temporary or permanent resources for breeding, feeding, shelter and movement for various species.	Provides temporary shelter and foraging opportunities, enables animals to move through the landscape to more productive habitat.	Variable
Primary Management Zones	Habitat Preservation	<b>Habitat Preservation</b> Wildlife <b>Habitat</b> Natural Parkland	Variable	Not Applicable
Percentage of Natural Environment	>75 per cent	>50 per cent	Not defined	Not defined

CONTENTS	CHAPTER 1	CHAPTER 2	CHAPTER 3	CHAPTER 4

#### **Table 1** Categories and Descriptions of Natural Areas

	Special protection natural area	Major natural area	Supporting natural area	Other parks with natural environments and naturalized area
Fragmentation	Maximize natural environment parcels. Minimize trail, pathway, road, and structure densities. Discourage and rehabilitate human desire line trails.	Maximize natural environment parcels. Strategically design trails, pathways, roads and structures to minimize densities. Discourage and rehabilitate human desire line trails.	Minimize fragmentation due to trails	Not defined
Buffers	Maximize transitional zones (aka buffers) to separate areas of incompatible use. Buffers occur between incompatible management zones and <b>natural areas</b> and the urban interface. If buffer zone does not exist, then a minimum setback of 50 metres must be applied.	Plan and introduce buffers to separate areas of incompatible use and at boundaries.	Develop transitional zones where possible in existing <b>natural areas</b> to minimize interface between areas of incompatible use.	May serve as buffers to <b>natural areas</b> .

#### Definitions

#### **Habitat Sensitivity**

Parks containing **habitats** with high ecological value that are susceptible to damage from human activities. These areas are often home to diverse plant and animal species, delicate ecosystems, or important natural resources. They can include forests, wetlands, or even specific locations within a larger ecosystem. Characteristics include their fragility, uniqueness, and the presence of endangered or rare species.

#### **Environmental Significance**

Identification of the scale at which the **natural area** contributes to ecological health and **biodiversity**.

#### **Wildlife Resources**

Informed by biophysical assessment information, describes the suitability and extent to which the natural **habitat** provides for local fauna.

#### **Management Zones**

Outlines the management priorities for that area along with activities that are allowed or restricted, which aids in ensuring management plan objectives are met.

• **Preservation** – Protection zones for areas of high environmental sensitivity (e.g., areas containing or supporting unique, threatened, or endangered natural or cultural features). Management and use should be informed by guidelines for special protection **natural areas** and the **habitat preservation** zone description within Parks & Open Spaces' *Habitat Management Plan Framework* (2022).

- Wildlife Habitat Features Protection zone for specific wildlife species' habitat occurring outside Zone 1. These may be included in habitat preservation zones, but also include areas with unique or critical habitats (e.g., hibernacula, dens, long-term nesting sites) and areas that may be closed to public access to protect sensitive species.
- Natural Parkland Areas managed primarily as natural environments that consist of habitats with less overall sensitivity to human disturbance. A larger variety of passive recreational and low-impact uses may be integrated into natural parkland to balance biodiversity conservation and nature-based park user experience, with the former taking precedence when competing uses are identified.
- Other (disturbed/manicured) Includes existing manicured turf parks, human-disturbed areas, and semideveloped areas where active and passive recreation occurs. This zone may include park amenities, buildings, recreational equipment and parking, requiring regular site maintenance.

## **Acceptable Uses and Guidelines**

The following guidelines address several **natural area** management issues. Usage pressures on **natural areas** threaten biodiversity and ecosystem health, requiring a customized management response. For **natural areas** without a site-specific Habitat Management Plan, the category will guide management actions in accordance with Table 2.

#### Table 2 Acceptable uses and guidelines for Natural Area categories

	Special protection natural area	Major natural area	Supporting natural area	Other parks with natural environments and naturalized area
Management Priority	Highest level of protection to ensure <b>conservation</b> of the integrity and diversity of biological resources and ecological functions. Minimal human impacts and activities to protect the park.	Parks have high <b>biodiversity</b> value, unique <b>habitats</b> and ecological function. Minimize human impacts & activities to protect the integrity and diversity of biological resources and functions offered by these <b>habitat</b> cores and stepping stones. <b>Sustainable</b> recreational activities may be considered.	Varies. Where supporting <b>natural areas</b> are large with habitat complexity and function as cores in the <b>ecological network</b> , follow major <b>natural area</b> guidelines. Others are to be managed as stepping stone <b>habitats</b> of five hectares or greater by providing natural spaces for wildlife movement and aim for <b>conservation</b> of diverse flora and fauna. Balance <b>conservation</b> with human use and recreation.	Should be managed to support <b>biodiversity</b> and provide connection to <b>nature</b> for the public.
Designated Pathways and Trails	Limit the location and distri pathways to prioritize <b>cons</b> fragmentation. Trail surface must balance <b>h</b> safety and public interests. I should be prioritized. Minimal trail width where sa Close desire line trails via ba education and signage. Approved regional pathway special recreation zones. Seasonal closure of trails ma wildlife needs. Lighting should not be perr Pathways Lighting Plan for s Various trail surfaces may be areas only.	ervation and reduce habitat requirement, user Habitat conservation afety allows. arriers, restoration, as to be considered as ay be considered for mitted. Refer to Parks and specific requirements.	Limit the location and distribution of trails and pathways to prioritize <b>conservation</b> and reduce fragmentation. Various trail surfaces may be used. Mobility and pathway accessibility where it is deemed environmentally sound. Regional pathways connections. Rare/occasional pathway or trail closure for wildlife protection. Lighting should be avoided or minimal for safety reasons only. Refer to <i>Parks</i> <i>and Pathways Lighting Plan</i> for specific requirements.	Encourage user access via Various trail and pathway surfaces on designated trails. Mobility and pathway accessibility prioritized. Regional pathway connections. Lighting should be provided for safe public access reasons. Refer to <i>Parks and Pathways</i> <i>Lighting Plan</i> for specific requirements.

CHAPTER 7

	d in this glossary takes precedence over definitions in other Parks and Open Spaces policies, plans and regulations		
Accessible	Is the opportunity to easily access the park system and programs.		
Active Recreation	Structured activities, often involving instruction or equipment, and requiring dedicated spaces/ amenities available through drop-in or bookings.		
Activity Centre	All areas defined as Major Activity Centres, Community Activity Centres or Neighbourhood Activity Centres in The City's <i>Municipal Development Plan</i> , and as shown on the Urban Structure Maps.		
Amenity/amenities	A feature, service or program that provides comfort, convenience, or enjoyment and enables users to recreate in a park.		
Asset	Anything that Calgary Parks and Open Spaces business unit owns, stewards and manages.		
Athletic Park	Recreation & Social Programs operates 13 athletic parks located across the city. Athletic parks cor of outdoor recreation amenities that accommodate structured sport and recreation activities for organized single or multi-sport play, leagues, tournaments and special events. They may include range of field amenities such as natural grass or artificial turf fields, ball diamonds, and cricket pit as well as support amenities such as washrooms, seating, and concessions.		
Barriers	Environmental, structural, systemic, social, and personal realities that prevent participation in sport of make such participation difficult to achieve (e.g., building design, transportation, attitudes, etc.). Barrier may be socio-economic (e.g., poverty, poor health) or may be characteristics of the sport system that prevent or limit the sport participation (e.g., lack of awareness programs, lack of specialized coaching o adapted equipment, etc.).		
Barrier-Free Design	The incorporation and utilization of design principles to construct an environment that is functional, safe and convenient for all users, including those with any type of disability.		
Biophysical Impact Assessment	An inventory and analysis of all living and non-living natural resources in a defined area.		
Biodiversity	The variability among living organisms — animals, plants, their habitats and their genes — from all sources including terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are part. This includes diversity within species, between species and of ecosystems.		
Boulevard	The unpaved portion of the road's shoulder from the back of the concrete curb up to the common property line. This boulevard area is usually sodded and includes a concrete sidewalk or paved pathway and street trees.		
Calgary Equity Index	The Equity Index is a geographically-based planning and decision-making tool that provides information about equity in Calgary. It's based on the social determinants of health, which are social and economic conditions that influence people's wellbeing. Based on census data collected from Statistics Canada, the index consists of 20 indicators across five policy categories: economic opportunities, governance and civic engagement, physical environment and infrastructure, population health and social and human development.		
Canopy	The top layer of vegetation in a forest, that which controls light levels in the understory.		
Park Carrying Capacity	Park carrying capacity for parks refers to the maximum use that can be accommodated by a park without causing excessive damage to the physical environment or affecting the visitor experience.		
Cemetery	Land that is set apart or used as a place for the burial of dead human bodies or other human remains or in which dead human bodies or other human remains are buried.		
Climate Adaptation	Refers to adjustment in the ecological, social or economic actions, policies, programs, tools and strategies intended to reduce the actual and expected negative impacts of climate change on our city's infrastructure, natural assets, economy and people.		
Climate Mitigation	The processes and actions that stabilize or reduce the greenhouse gas concentration in the atmosphere resulting from human economic activities, energy production and land use.		
Climate Resilience	Systems designed and function in a way to withstand, respond and adapt more readily to climate shocks and stresses.		
Commercial Structure	Permanent or non-permanent structures within parks and open space that can be utilized for supporting services.		

CONTENTS

CHAPTER 1

CHAP

CHAPTER 2

Community Association Sites	Sites that are operated by, or on behalf of, an organization whose membership is voluntary and generally serves the residents of a specific neighbourhood with the purpose of: providing programs, public facilities, or services; providing non-profit sporting, educational, social, recreational or other activities; or where members of the facility and the public participate in recreation and leisure activities.
Conservation	Conservation refers to the in-situ maintenance of ecosystems and natural and seminatural habitats and of viable populations of species in their natural surroundings and, in the case of domesticated or cultivated species in the surroundings where they have developed their distinctive properties.
<b>Conservation Reserve</b>	As defined by the Municipal Government Act.
Crime Prevention Through Environmental Design (CPTED)	The proper design and effective use of the built environment, which may lead to a reduction in the fear and incidence of crime and an improvement in quality of life.
Cultural Landscape	Cultural landscapes represent the combined works of nature and of humankind and are illustrative of the evolution of human society and settlement over time, under the influence of the physical constraints and/ or opportunities presented by their natural environment and of successive social, economic and cultural forces, both external and internal. Cultural Landscapes in Calgary generally fall into three categories; culturally significant indigenous landscapes; landscapes with archaeological resources (precontact and post-contact); and landscapes with cultural significance associated with recent history (post-contact).
Cultural Landscape Conservation	Site management practices that retain the cultural and/or historic significance and integrity of the landscapes; this significance can be defined by Knowledge Keepers, regulatory boards, and/or appointed experts. Conservation can include the ongoing use of landscapes for traditional practices, the retention of archaeological resources within development, or strategies for the maintenance of "character defining elements" within a landscape.
Dark Sky Principles	Internationally accepted principles with the intent to minimize the amount, direction, time, and type of artificial lighting that is emitted.
Dog Areas	A fully fenced and gated space, designed specifically for owners to allow their dogs off-leash.
	<b>On-leash areas:</b> In parks that permit dogs on-leash, dogs are to be kept on the sidewalk or trails. Owners must always be in control of their dogs and are expected to pick up after their pets immediately.
	<b>Off-leash areas:</b> A multi-use park, or portion of a multi-use park, designated by the Director of Parks as an area where dogs are allowed off-leash under full control of the owner. These sites may be unfenced, partially fenced, or fully fenced.
<b>Drought Tolerant Species</b>	Landscaping through seeding/planting native species with the capacity to endure drought condition.
Dry Pond	A stormwater pond used to temporarily store stormwater runoff to restrict downstream discharge to predetermined rates and to reduce downstream flooding and erosion potential. Most dry ponds have no permanent pool of water.
Ecological Network	A network of ecological components (natural habitats, corridors and buffer zones) which provides the physical conditions necessary for ecosystems and species populations to survive in a human-dominated landscape.
<b>Environmental Reserve</b>	As defined by the Municipal Government Act.
Environmentally Significant Area	<ul> <li>Key natural components recognized by the City of Calgary that provide essential ecosystem functions and services within urban or adjacent landscapes and fall under one or more pillars:</li> <li>1. Water Quality and Quantity.</li> <li>2. Rare, Intact, or Biologically Diverse.</li> <li>3. Habitat for Native Species of Interest.</li> </ul>
Equitable Equity	Equitable or equity means conditions are adjusted to meet people's diverse needs, strengths, and social realities. In requires recognition that different barriers (often systemic) exist for diverse individuals or groups. The result of Equity is all people can benefit equally from City services.

CHAP

Equity Deserving Communities	Equity deserving groups are communities that experience significant collective barriers in participating in society. This could include attitudinal, historic, social and environmental barriers based on age, ethnicity, disability, economic status, gender, nationality, race, sexual orientation, transgender status, etc. Other commonly used phrases include "equity seeking groups" and "equity denied groups".
Events	Level 5 Events
	Low impact Community Program (e.g., Block Party, Picnic, BBQ, Wedding, walks/runs on pathways). Contributing factors generally include:
	1. up to 1000 attendance;
	2. one day only (includes set up and take down);
	3. one location (may combine park and pathway as one location);
	4. only one permit required;
	5. one business unit services required; and
	6. Safety/Security coordination support:
	Business as usual,
	Normal operations,
	Operationally ready,
	Heightened awareness
	7. Individual assessments of events are required to ensure appropriate services and coordination. If there is a significant impact on public property, public facilities and/or public safety, it may trigger a review by the Interdepartmental Event Team.
	Note: New Organizer or significant issues identified from previous edition may trigger event level to increase to a level 4 for inaugural year or until issues are resolved after the current season
	Level 4 Events
	Medium Impact Community Event, sport/recreation activities, festivals, and parades, e.g., multiple permits, larger attendance, pyrotechnics, fireworks. Contributing factors generally include:
	1. attendance between 1000-10,000;
	2. up to a three-day event (including set up and take down);
	3. three or less locations;
	4. two or more permits;
	5. two or more city business unit services required; and
	6. Safety/Security coordination support:
	Incident Command Post at Site or suitable location, at the discretion of the City of Calgary
	Lead Agency as Incident Commander or Unified Command
	Note: New Organizer, significant issues identified from previous edition or events occurring past 8 p.m. may trigger event level to increase to a level 3
	Note: Event organizers would be contacted by the City of Calgary public safety agencies during the planning stages of the event and be made aware if an Incident Command Post were to be established.

Fire Smart	Based on foundation	Based on foundational scientific evidence that suggests changes to the built environment are the best and most cost-effective way to increase a home's survivability from wildfire.				
Public Golf Courses	Public golf courses owned and operated by The City with an emphasis on instruction, entry level to moderate caliber play and competitive pricing for public accessibility. Although fee paying also used for passive recreation.					
Greater Downtown	The greater downto	The greater downtown is made up of six communities including the Downtown Core, Downtown West, Eau Claire, Chinatown, East Village and Beltline.		Core, Downtown		
Green Burial Options	Designed to reduce who passed are laid	Designed to reduce environmental impacts and ensure a legacy of protecting the land where those who passed are laid to rest. They emphasize sustainability and simplicity and offer you the chance to continue a lifetime of caring for the environment as part of your loved one's last wishes.		er you the chance to		
Green Stormwater Infrastructure (GSI)	Green stormwater infrastructure is an example of natural infrastructure that incorporates infrastructure natural features and processes into stormwater management. Measures such as infiltration, evapotranspiration, harvesting, filtration, and retention are used to reduce stormwater rates and volumes and remove contaminants at or close to the source of runoff. Green stormwater					

infrastructure aims to mimic the natural water cycle and ecological functions.

CHAPTER 7

ER 7

Growing Media	A soil type of purposeful characteristics that optimizes conditions for plant growth by balancing texture (minerals), organic content, biological activity, chemical properties, water movement, atmospheric gas exchange, and bulk density.
Habitat	The environment in which a population or individual lives; includes the place where a species is found and the characteristics of the place (e.g., climate or the availability of suitable food and shelter) that make it especially well-suited to meet the life cycle needs of that species.
Habitat Management Plan	10-year operational plans focused on how we manage natural areas. Their overarching purpose is to outline a clear strategy and timeline for management activities and projects that help maintain or improve the ecological health and function of a park.
Hydrologically Invisible	Provides a natural drainage approach where water does the same thing after the trail was built as it did before.
Inclusive	Environments in which any individual or group is respected and valued. The result of social inclusion is that people feel they belong and can fully participate in society. Providing equitable access to parks and open space for all ages and abilities, cultures and minority groups.
Indoor Park	A park in a fully enclosed space with no size requirement that provides one or more park functions. Indoor parks will generally have limited public access.
Infrastructure	This definition refers to infrastructure for the Park system only. Physical elements and equipment installed below or above grade that serve a specific purpose within a park to support park amenities. These include but are not limited to playground equipment, benches, garbage receptacles, signs as well as elements like stormwater ponds, irrigation systems, utility conduits.
Intensification	The development of a property, site or area at a higher density than currently exists. Intensification can be achieved through redevelopment, development of vacant/underutilized lots, the conversion of existing buildings, or through infill development in previously developed areas.
Interment	The burial of a corpse in a grave or tomb, typically with funeral rites.
Joint Use Site	Lands set aside for, or including, a school building, a location for a school building or a school playing field and community playing fields with facilities and grounds which are accessible to both school and non-school users. In the case of joint use sites these are co-owned by The City and the school board(s).
Linear Park	ls a connector park within the park system, they provide space for interesting and safe mobility connections to other parks, support active lifestyles and regular park usage. They should be a minimum of 13 metres and a maximum of 20 metres in width.
Local Park Space	Parks that are provided for community use aligned with park typologies excluding environmental reserve, regional parks and open space.
Multifunctional Park	A park is considered multifunctional when it has two of the three functions. The three functions of parks include: environment, outdoor sports and recreation.
Multimodal	Infrastructure facilitating more than one way of moving from one place to another, for example walking, wheeling, rolling and driving.
Municipal Reserve/ Municipal School Reserve	As defined by the Municipal Government Act.
Native	Species of animals or plants that occur naturally in an area and have not been introduced by people or their direct activities.
Natural Area	A City-owned park or portion of a park or open space where the primary role is the protection of an undisturbed or relatively undisturbed parcel or parcels of land with characteristics of a natural/native plant community.
Naturalization	A type of habitat restoration focused on improving ecosystem management or repairing some ecosystem function.
Natural System	Is comprised of natural areas and naturalized space which may or may not be part of the ecological network.
Nature	The phenomena of the physical world collectively, including plants, animals, [micro-organisms], the landscape and other features and products of the earth, as opposed to humans or human creations (Oxford Dictionaries).

CONTENTS	CHA

APTER 1

Neighbourhood	A neighbourhood is a distinct part of a larger community, containing up to 5,000 people. A neighbourhood is typically considered to be a primarily residential area within walking distance of a local commercia area, school, park, transit station, etc. A Neighbourhood should range between 40 and 75 hectares (99 and 185 acres) in size.	
Neighbourhood Park	Neighbourhood parks are central in supporting community building. This is the primary gathering space and hub of activity within the park system within a neighbourhood. They are large enough in scale to provide multifunctionality and a variety of amenities. Neighbourhood parks must be no smaller than 1.00 hectare and no larger than 4.85 hectares (2.50 acres to 12.00 acres) in size.	
Open Space	Open space is land that has a primary purpose that is utilitarian or to provide a recreational activity with managed access, but has a secondary purpose that provides park system functions. Examples include roadway greens, public utility lots, transportation and utility corridors and regional amenitie such as regional sport fields, athletic parks, cemeteries and public golf courses.	
Park	This is a space set aside for human enjoyment, recreation, education, cultural or aesthetic use; or for the protection of wildlife or natural habitats.	
Park System	The park system includes public spaces that provide opportunities for recreation, active mobility, and access to nature and is comprised of parks, natural areas and open space.	
Passive Recreation	Recreational use or activities which require no special or formal infrastructure or amenities.	
Playfield	Developed park space providing educational and recreational opportunities for specialized sports activities such as baseball, softball, soccer, rugby, lawn bowling, cricket, field hockey, etc.	
Plaza	Plazas are public spaces, generally with hard landscaping, that are part of the Parks System. They are strategically located across the city especially in high activity areas. Plazas are multi-functional and flexible as they enable permanent, seasonal or impromptu passive recreation, cultural, civic, and commercial activities and programing. As year-round destinations, plazas support pedestrian movement yet their amenities invite people to stay and participate in a variety of social activities including gathering interacting, playing, participating in cultural or civic events, shopping local and relaxing.	
Preservation	Designed to provide protection and maintenance of currently undisturbed natural areas and enhancement of existing natural features. Human access to these areas would be limited.	
Professional Film and	The process or activity of producing films or television shows.	
<b>Television Production</b>	Major – means all commercial filming that is not considered a minor shoot.	
	<b>Minor</b> – includes minor film or television shoot that requires filming to take place on one day at one location with no disturbance to park users or natural resources. The following criteria are also used to determine what is considered a minor shoot:	
	Limited number of vehicles (three or less)	
	No sets or major equipment	
	No alteration to park facilities, furniture, signs, etc.	
	Ten or less persons	
	<ul> <li>Only use of handheld photographic equipment (includes a tripod)</li> <li>Minimal or no monitoring required by Park and Open Spaces staff.</li> </ul>	
	<ul> <li>Minimal or no monitoring required by Park and Open Spaces stan.</li> <li>Any filming occurring in a natural area becomes major.</li> </ul>	
Programming	A theme, design element or activity that is provided within a park.	
Public Tree	Any tree on City-owned land.	
Public Utility Lot	Titled lots intended to provide for infrastructure and utility facilities, maintenance facilities, and public transportation uses. They can be operated (individually or jointly) by the Federal, Provincial and Municipal levels of government.	
Publicly Accessible Private Open Space	Outdoor open space located on the development parcel that is made available to the public through a registered public access easement agreement acceptable to the Development Authority, and is in a location, form, configuration and constructed in a manner acceptable to the Development Authority.	

CHAPTER 3	CHAPTE	R 5
-----------	--------	-----

СНАРТ

Regional Parks	Regional parks provide a special purpose or attraction which benefits users beyond an immediate neighbourhood or community. They are designed to support longer durations of stay, accommodate a range of activities, serve multiple communities and include specialized amenities which would not be typically found in neighbourhoods parks, such as water features, multi-sport surfaces, cultural landscapes or accommodation for large event spaces.	
Resilience	The ability to adapt successfully to difficult changing circumstances. The capacity of individuals, communities, institutions, businesses and systems to adapt and thrive despite chronic stresses (e.g., water shortages) and acute shocks they experience (e.g., floods).	
Riparian areas	Areas where the plants and soils are strongly influenced by the presence of water. They are transitional lands between aquatic ecosystems (e.g., wetlands, rivers, streams, or lakes) and terrestrial ecosystems.	
Soil	Composed of minerals, living organisms, organic matter, gas and water. Not all soils are suitable for plant growth and may have other purposes to an urban environment such as the movement of water gas or providing support for structure and loading. (see Growing Media)	
Sub-neighbourhood Park	Sub-neighbourhood parks provide supporting amenities to the neighbourhood park and increase accessibility of the Park system. They are between 0.40 hectare to 1.00 hectare in size.	
Sustainable/ Sustainability	Meeting the needs of the present without compromising the ability of future generations to meet their own needs. It includes environmental, economic and social sustainability.	
Systemic Barriers	Barriers are obvious or subtle obstacles that prevents or restrict members of society from accessing, using, or doing something that others can readily access, use or do. They can be physical, economic, financial, informational, and/or organizational policies/ practices. Systemic barriers are policies, practices, or behaviours in society that exclude marginalized groups.	
Universal Design	An approach that incorporates products as well as building features which, to the greatest extent possible can be used by everyone. It is the integration of both usability and accessibility methods that enable customer interaction with resources and services.	
Urban Forest	Includes all trees and associated vegetative understory in the city including trees and shrubs intentionally planted, naturally occurring, or accidentally seeded within city limits. An urban forest includes parks, river valleys, streets, roadways, natural areas, commercial and private lands	
Vendor	A business the sells food and other retail goods which can be mobile or permanent.	
Visitor Management Plan	A plan that provides development and management tools and tactics to accommodate park visitors while ensuring park resources are protected and resilient over the long-term.	
Wheeling	A person travelling by bicycle, skateboard, in-line skates, kick-scooter, e-scooter, or other similar form of mobility device.	
Wayfinding	A term used to describe how people respond to the built environment to orient themselves. Element that contribute to wayfinding include reference points such as signage, natural areas or parks, landmark buildings, bridges, distinctive lighting, public art, etc.	
Xeriscaping	The process of landscaping that reduces or eliminates the need for irrigation.
