

the Community Orchard Research Project

The Ralph Klein Legacy Park Orchard will be the fourth pilot orchard planted as part of the City of Calgary's **Community Orchard Research Project**. The purpose of these pilot orchards are to determine the survival rates and overall quality of fruits produced. As a result, valuable insight will be gained into tree and shrub species that are best suited for our City's prairie climate and we can move forward with planting more community-oriented orchards throughout neighbourhoods in Calgary.

The Community Orchard Research Project was developed in accordance with the **ImagineCalgary Plan** for Long Range Urban Sustainability by educating Calgarians about the benefits of growing locally.
