Bearspaw South Feeder Main

Your source for construction news in 2026
Bowness - Montgomery - Parkdale

Sept. 24, 2026

We're on track!

The Bearspaw South Feeder Main Replacement Project remains on schedule, with 80 per cent of the new feeder main now installed. More than 90 per cent of the materials needed to complete the project are already on-site in Calgary, keeping us on track to put the new feeder main into service by the end of 2026.

Update on Stage A construction

Microtunneling between the Shaganappi Pump Station and 73 St N.W.

- [Stage A construction](#) began in January and used microtunneling to complete 3.7 km of tunneling beneath existing infrastructure.
- Installation of the pipe is now complete, but crews remain on site to complete chamber installation, pipe welding and supporting

infrastructure.

Update on Stage B construction

Open-cut construction along 34 Ave N.W.

- [Stage B construction](#) began in June and remains on schedule.
- More than 1.6 km of steel feeder main pipe has been installed (61 per cent of the Stage B segment).
- Pipe installation is complete on seven of 13 blocks along 34 Ave N.W.
- Four crews are working simultaneously in different sections of 34 Ave N.W. to minimize the overall construction timeline.
- Roads, sidewalks and property access are being restored as construction advances through each section.
- Landscaping restoration will continue into Spring 2027.

Bearspaw South Feeder Main - Stage B - Steel Pipe Installed

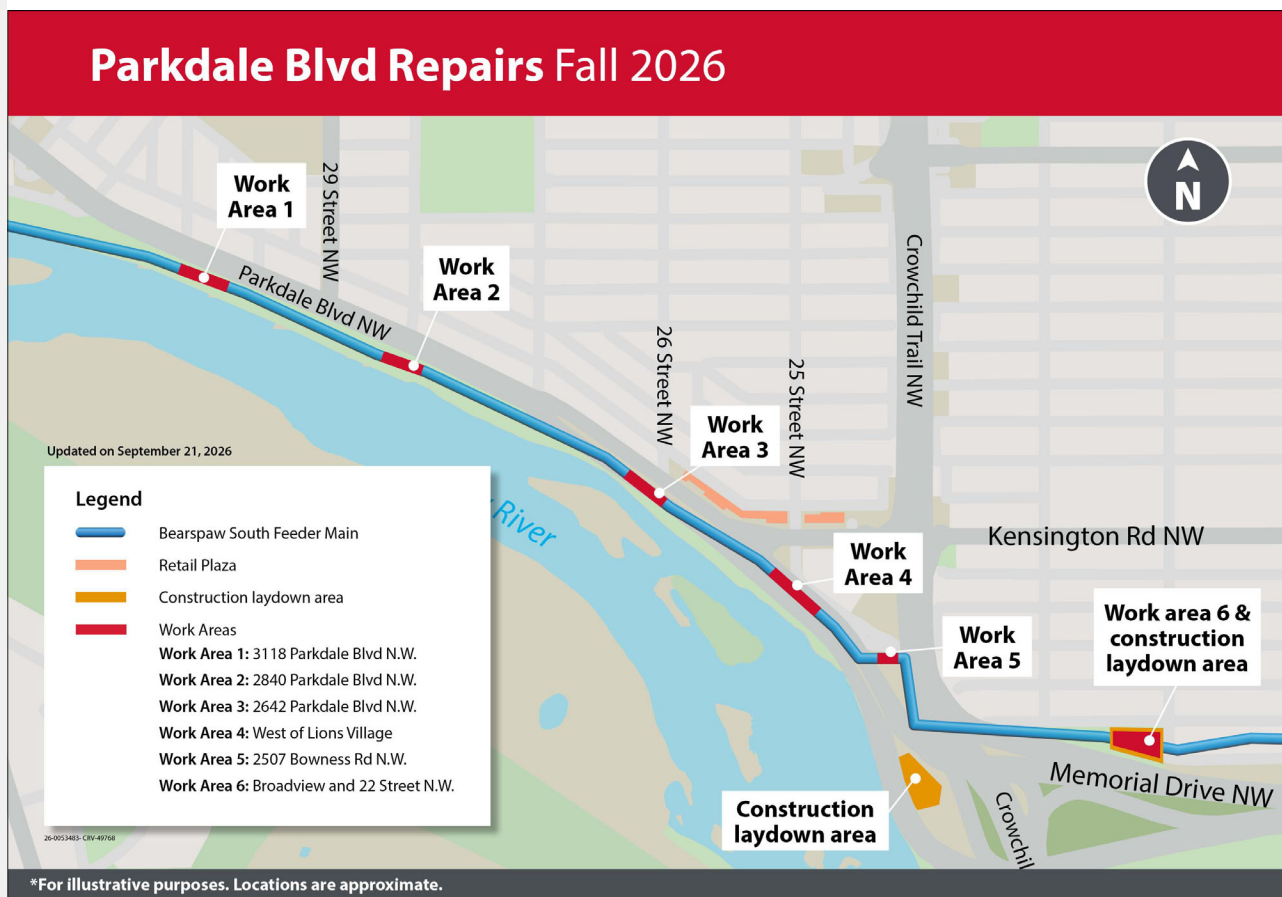

Upcoming pipe tie-ins and water restrictions

- The Bearspaw South Feeder Main will need to be shut down to connect the new feeder main to the existing water system. A date for the shut down is still being determined.
- Pipe tie-in connections will happen at various locations along the new feeder main pipe and include open-cut construction.
- **Stage 4 water restrictions** will be required during this time (no outdoor water use and indoor water conservation).

Parkdale Boulevard repairs

Replacing segments of the feeder main under Parkdale Blvd N.W.

- While the feeder main under Parkdale Boulevard is in good overall condition, inspections identified locations where targeted repairs will help maintain long-term reliability.
- Timing and number of repairs to be completed is currently being confirmed.
- Repairs will involve excavation, removing sections of pipe and replacing them with new steel segments.
- Road and pathway detours will be required – detour maps will be posted on the [website](#) in October.
