

Bridgeland-Riverside Multimodal Bridge Feasibility Study

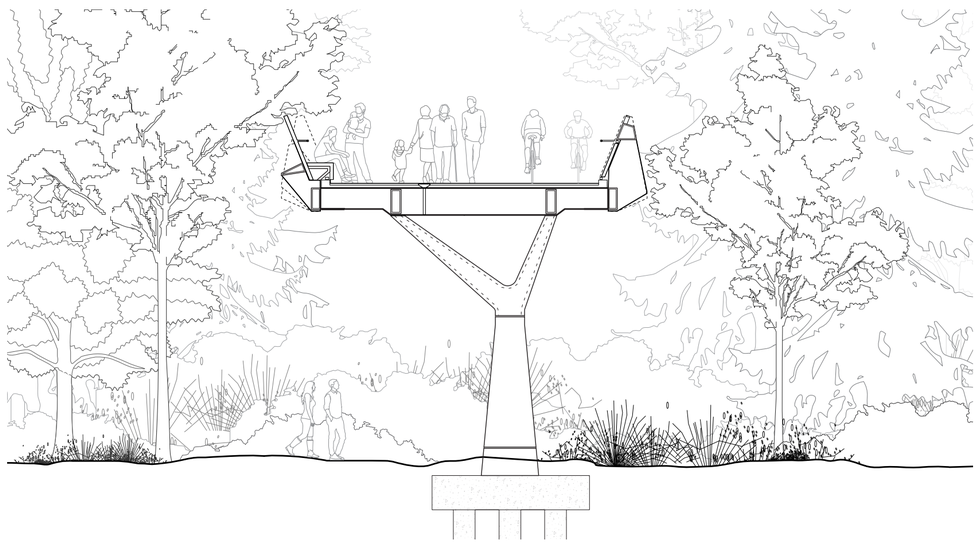

An urban design proposal for a new universally accessible connection that links the Bridgeland-Riverside community with the Bridgeland-Memorial LRT Station, the Bow River pathway network, and St. Patrick's Island, enhancing access and reconnecting the community to the river and parkland.

The missing connection: new transportation infrastructure has severed the connection between the community and the adjacent natural amenity.

The journey: the bridge curves around natural features of the river, celebrating the journey between the community and the Island, immersed in the existing canopy of trees and landscape.
