Calgary is most at risk of river flooding from May 15 to July 15

This is when we get our largest rainfalls and snowpack melts in the mountains, which can lead to fast moving water and high river levels with very little warning.

Understand your risk

The downtown flood barrier will be operational spring of 2022. It will work with the recently completed West Eau Claire flood barrier and the new deployable flood gates on the lower deck of Centre St. Bridge to prevent major flooding of Chinatown.

While the barrier will better protect your community, we can't prevent all floods. Take these steps to protect the people and things you value most.

Be prepared

If you live in an apartment or condo:

- Move valuables and documents out of underground storage lockers.
- Pay attention to alerts and move your vehicle out of the building's underground parkade if there is flood advisory.
- Ask your landlord or property manager:
 - Does your building have a sump pump and sewer backflow valves?
 - Have they been inspected/serviced in the past 12 months?
 - Is flood damage covered by the building's insurance policy?
- Get to know your neighbours.
 - Reach out to neighbors who live alone and may need extra help or transportation during an evacuation.
 - Exchange cellphone numbers, so you can call or text each other during an emergency.

Create an emergency plan with your family

- Ensure you and your family know where to meet and who to call in case you need to leave your home quickly.
- Include multiple ways to get to your loved ones (e.g. schools or daycare) and to your meeting point if roads and bridges are closed. For example, Centre Street Bridge and Reconciliation Bridge.
- Take a picture of your plan to save a copy on your phone or tear out this page and tape it to the inside of an entryway closet.
