

Pedestrian Volumes by Intersection - Citywide (2022 to 2025)

Pedestrian volumes shown are based on data collected from various study types conducted between 2022 and 2025. Totals represent six hours of observation (7:00–9:00, 11:00–13:00, and 16:00–18:00) and are calculated by summing counts from all crosswalks at each intersection. Volumes were derived using extrapolation methods from the Calgary Traffic Counts Systems database.
