

24 Street SE Storm Pond and Ogden Landfill Remediation

NEWSLETTER

JULY 2021

Project update

The City of Calgary has completed construction of a new dry storm pond on the northwest end of the now-closed Ogden Dry Waste Landfill (along 24 St. SE). We have also completed the construction of an embankment adjacent to the storm pond which will be part of the corridor for the future Green Line LRT.

The majority of work took place from July to December 2020, with a pause in work from January to mid-April 2021. Landscaping and other minor works took place this spring.

The project is now considered to be complete and the site is open to the public as of July 1, 2021.

What we did in Spring 2021

- ✓ Our contractor, Morgan Construction & Environmental LTD., and their subcontractors, completed landscaping activities such as; adding topsoil and seed placement, planting shrubs and trees, and installing stone edging as well as, benches.
- ✓ Commissioned the storm sewer system components;
- ✓ Removed existing fence along 24th St and installed a new fence on the east side of the pond;
- ✓ Paved access points to and around the pond.

Looking west towards 24 St. SE – the new 'dry' storm pond and LRT embankment.

What to expect in 2021 and beyond

Ongoing maintenance of the site will be executed by the contractor through the maintenance period, which extends until 2024.

Over the life of the pond, it is anticipated there will be ongoing maintenance activities such as watering the trees and shrubs, mowing the grass, weed control, and sediment removal.

The City would like to thank residents for their patience and understanding as we worked to improve our stormwater system and build part of the future LRT corridor.
