

CHANGES TO THE STORMPOND CCC/FAC INSPECTION SCHEDULING

Water Resources is pleased to announce changes to the process for scheduling pond inspections and reviewing submissions for Construction Completion and Final Acceptance certificates. These changes should help to reduce the overall time required for a pond CCC or FAC application.

Stormpond Construction Completion Certificate (CCC) and Final Acceptance Certificate (FAC) applications will continue to be submitted by industry to Water Resources Development Approvals:

Email: WA-ResourcesDevelopmentApprovals@calgary.ca

Mailing Address:
Development Approvals
The City of Calgary
Mail Code 409
625 25 Avenue SE
Calgary, AB T2G 4K8

Once the submission package is received, Development Approvals will review to ensure that the package is complete. A request will then be submitted to schedule the control panel commissioning (CCC only) and field inspection. The scheduling of inspections should be completed within 10 business days. The scheduling of the commissioning and inspection will be independent of each other and will occur concurrently with the detailed package review. Previously, these three steps were completed sequentially. Once all three steps have been completed, deficiencies will be compiled (if any) and a decision will be sent back to the applicant.

For re-inspection submissions, applicants should include descriptions and photos of the deficiencies being addressed with their revised CCC or FAC packages to Water Resources Development Approvals to help expedite the process.

Please note that in addition to the process noted above, stormpond CCC and FAC signoffs from Inspection Services are still required.

For more information, please contact Maggie Choi, Leader, Development Approvals at Maggie.Choi@calgary.ca.
