

McKenzie Lake Feedermain Upgrade

Fall-Winter 2022

Background

The Deerfoot Tr SE Feedermain repair and upgrade project was the result of a leak detected on a large diameter supply line.

Although the initial repair is now complete an additional leak was found on a secondary line that supports the proper operation of the feedermain.

Project Timeline

Work will continue thru the fall and into the winter of 2022.

Project details

Access to the worksite will be via the greenspace west of McKerrell Way SE.

Once repairs are complete the temporary road in the greenspace west of McKerrell Way SE will be removed and the greenspace rehabilitated. Depending on the weather this will happen following completion of the repair or in the spring of 2023.

Construction impacts

- Speed reduction on southbound Deerfoot Trail SE between McKenzie Lake Blvd SE and Stoney Trail SE.
- Increased noise and construction traffic related to heavy equipment operations during work hours (6:00am – 9:00pm).

We do not anticipate any disruption to water service supply during repairs.

Project information or questions

Please contact 311 with any questions or concerns you may have. For more information visit calgary.ca/waterprojects.
