**Implementation of New Manhole Cover Patterns,
AASHTO M306, and ISO 9001**

Due to the ongoing COVID-19 crisis, there have been issues supplying some of the new required products for the 2020 Water and Sewer Construction Standard Specifications. Water Resources is delaying the implementation of the new manhole cover patterns for Stormwater, Wastewater and Water until Jan 1, 2022. Until this time, the approved designs on Sheet 46 of the 2018 Water Specifications and designs from Sheets 1 & 1A from the 2018 Sewer Specifications are acceptable in addition to the corresponding 2020 designs.

AASHTO M306-10 and ISO 9001-15 requirements on casts and casting facilities will not be implemented at this time and will again be reviewed for Jan 01, 2022.
