Preface

Area Redevelopment Plans (A.R.P.s) are planning documents, adopted by By-law, which outline a comprehensive program of land use and transportation policies and other planning proposals that help to determine and guide the future development of individual communities within the city. As such, an A.R.P. is intended to supplement the Land Use By-law by providing a local policy context and, where appropriate, specific land use and development guidelines for use by the Approving Authority. While the districts under the Land Use By-law apply uniformly throughout the city, an A.R.P. provides a community perspective to the existing land use districts as well as to proposed redesignations of specific sites within a community.

The expected life of the Albert Park/Radisson Heights A.R.P. is ten to fifteen years. This may vary in relation to general growth trends within the city or to specific trends in Albert Park/Radisson Heights. It may be necessary, therefore, to evaluate the Plan's effectiveness in meeting its objectives within approximately five years of its approval.

Finally, it should be noted that municipal public facilities and improvements proposed or recommended in the Albert Park/ Radisson Heights Area Redevelopment Plan and Supporting Information (e.g. pathways, community recreational facilities) are subject to the City's capital budget priorities and approval process.

The Municipal Government Act (MGA) outlines the purpose and scope of powers for municipalities. The Albert Park/Radisson Heights Area Redevelopment Plan is a statutory document that designates an area within the city for redevelopment. The Albert Park/Radisson Heights Area Redevelopment Plan (referred to as 'this Plan') must be read in conjunction with the Municipal Development Plan (MDP) Volume 1 and Volume 2 Part 2: The Developed Areas Guidebook (the Guidebook) (see Map 1 for the area that is subject to the Guidebook), the Calgary Transportation Plan (CTP) and other City of Calgary policy and guiding documents, unless otherwise indicated. In the event of a discrepancy between this Plan and the Guidebook, the policy of this Plan will prevail.

1.0 Introduction

1.1 Study Boundaries

The boundaries of the Albert Park/Radisson Heights Area Redevelopment Plan (A.R.P.), illustrated on Map 2, are:

North: Memorial Drive E.

East: 36 Street S.E.

South: 17 Avenue S.E.

West: Barlow Trail S.E.

The A.R.P. study area encompasses approximately 175 gross hectares (432 gross acres).

1.2 Context

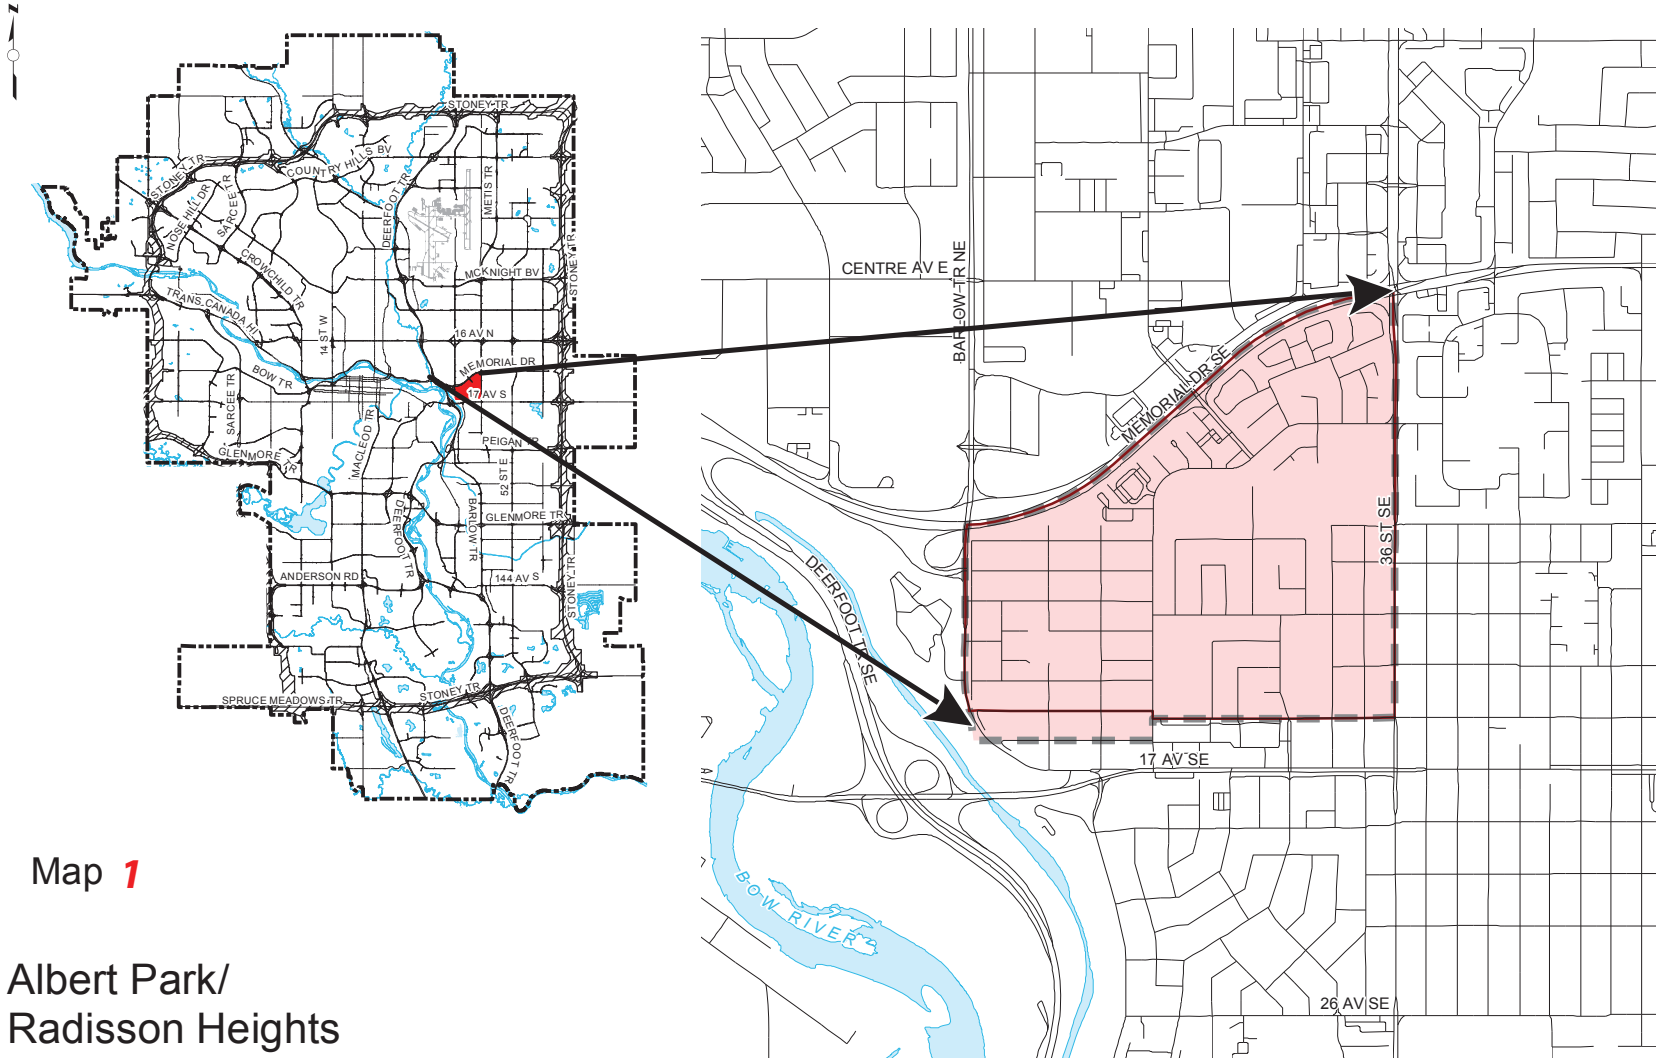

Albert Park/Radisson Heights is located to the east of the Downtown and inner city and is separated from them by the Bow River and Deerfoot Trail. It has a population of approximately **currently at peak 6,921** people.

This community enjoys ample open space, is well provided with public and separate schools, has good access to shopping and city-wide transportation routes, and has views of the Bow River Valley, the Downtown and the mountains. However, like many communities close to Downtown, it suffers from a number of problems such as shortcutting of non-local traffic, residential infill development that is insensitive to the block or the community at large, and inconsistent property maintenance.

Since this community became part of the City of Calgary as part of the 1961 annexation, there has been considerable residential development in Calgary. For example, adjacent newer communities like Dover, Penbrooke Meadows, Forest Heights and Marlborough were developed during this period. Within the community, Radisson Heights and Radcliffe Village were developed during this era too. As well, the two older areas of Albert Park/Radisson Heights, developed between 1912 and 1950 have undergone redevelopment to semi-detached and duplex dwellings. This has resulted in a decline in the number of resident homeowners in the community.

At a Public Hearing in 1975, City Council approved the Forest Lawn Design Brief outlining land use, transportation and open space policies for a number of East Calgary communities including Albert Park/ Radisson Heights. The conservation and stabilization policies proposed in the Design Brief are further encouraged through this A.R.P.

Major developments adjacent to the community since 1975 (e.g. industrial expansion to the north and further city growth in the northeast) have had impacts on the area which this A.R.P. addresses.

Map 1

Albert Park/
Radisson Heights

Study Area

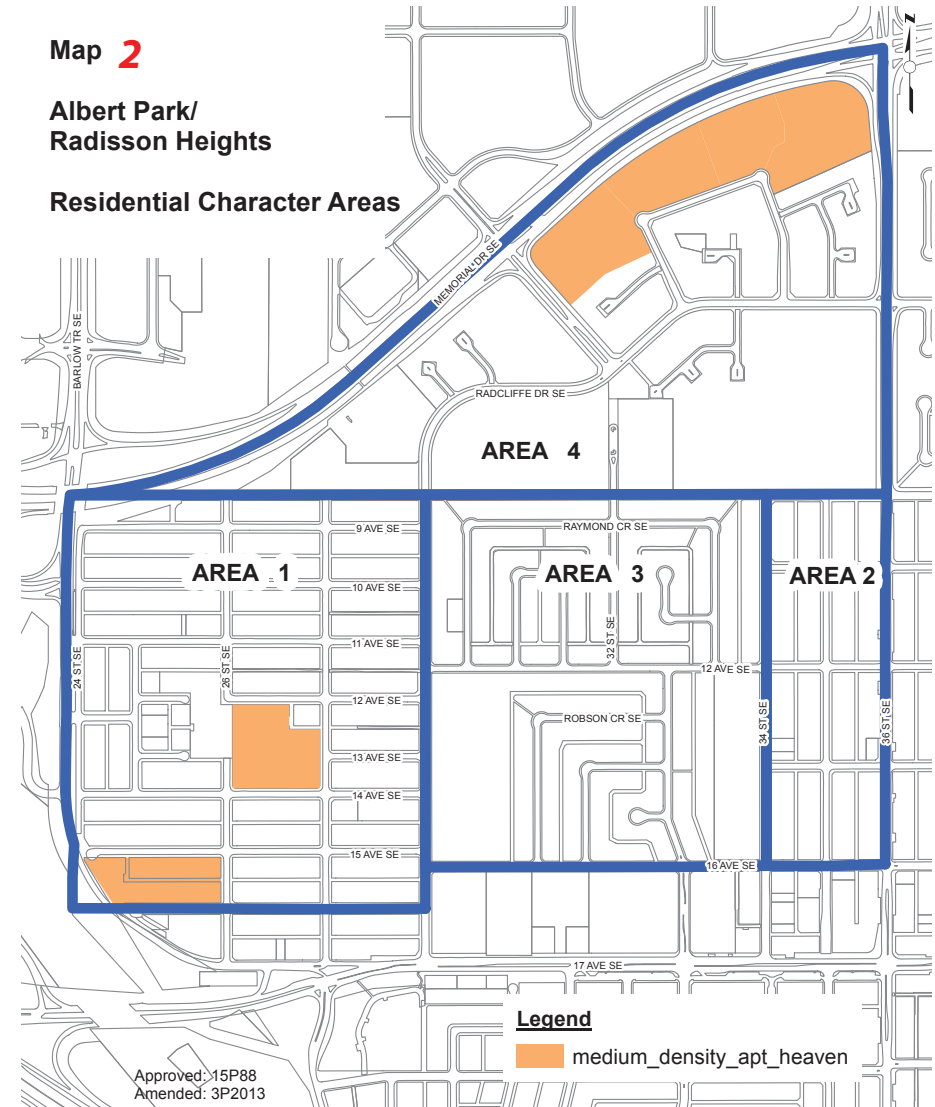

This map is conceptual only. No measurements of distances or areas should be taken from this map.

Approved: 15P88
Amended: 3P2013

1.3 Goals

The goals of the Albert Park/Radisson Heights A.R.P. are:

1. To implement the policies of the Calgary General Municipal Plan and other relevant Council policies which pertain to the study area.
2. To encourage land use stability through:
 - the preservation and rehabilitation of the existing low density residential dwellings;
 - improving the interface between residential and commercial land uses.
3. To improve the quality and type of recreational and open space facilities and to ensure that these amenities adequately meet the needs of the existing and future population in the area.
4. To reduce the shortcutting of non-local traffic on non-residential streets.
5. To assess social issues and to recommend any necessary initiatives.

2.0 Land Use and Development

2.1 Residential

2.1.1 Context

Albert Park/Radisson Heights is primarily a low density residential community, characterized by single-detached (single family), semi-detached duplex and townhouse dwelling units. As well, medium density apartment development exists on the edge of the community and close to major traffic routes.

2.1.1.1 Low Density Residential Character Areas

There are four distinct low density residential areas in the community (Map 2), that are identified by different periods of development, different zoning and different land use issues.

■ Area 1 (West of 28 Street)

This part of the community is the location of the original subdivision developed on a grid system of streets. This area includes single family dwellings constructed between 1911-13, bungalows and duplexes of the 1960's and small lot infill development of the 1970's and 1980's. Most of the structures are developed on 50 foot parcels. It has a varying topography which allows for views to the south and to the west.

Specific issues in Area 1:

- Two structures (an older church building and hall) located at 1237 - 28 Street S.E. (Site 1, Map 3) were originally used as the Albert Park Mission School. This use was changed with the redesignation of the site from R-2 to DC (for a private club) in June 1971. The club use has now been replaced by a church use which is not allowed under the DC district.

- During the last few years, similar to other inner city communities, the R-2 sections of Albert Park/Radisson Heights have experienced the subdivision of 50 foot lots into two 25 foot lots and the development of single detached infill housing on these lots. Some of these developments have been constructed without respect for the existing developments on the block.

■ Area 2 (between 34 and 36 Streets and between 10 and 16 Avenues)

Subdivided in 1908, this area is characterized by a mix of dwelling units constructed between 1912 and the present. It also has a grid street system. Like Area 1, it consists of lots with 50 by 125 foot residential lots. Property maintenance is generally good except on 36 Street where some decline is evident.

■ Area 3 (between 28 and 34 Streets)

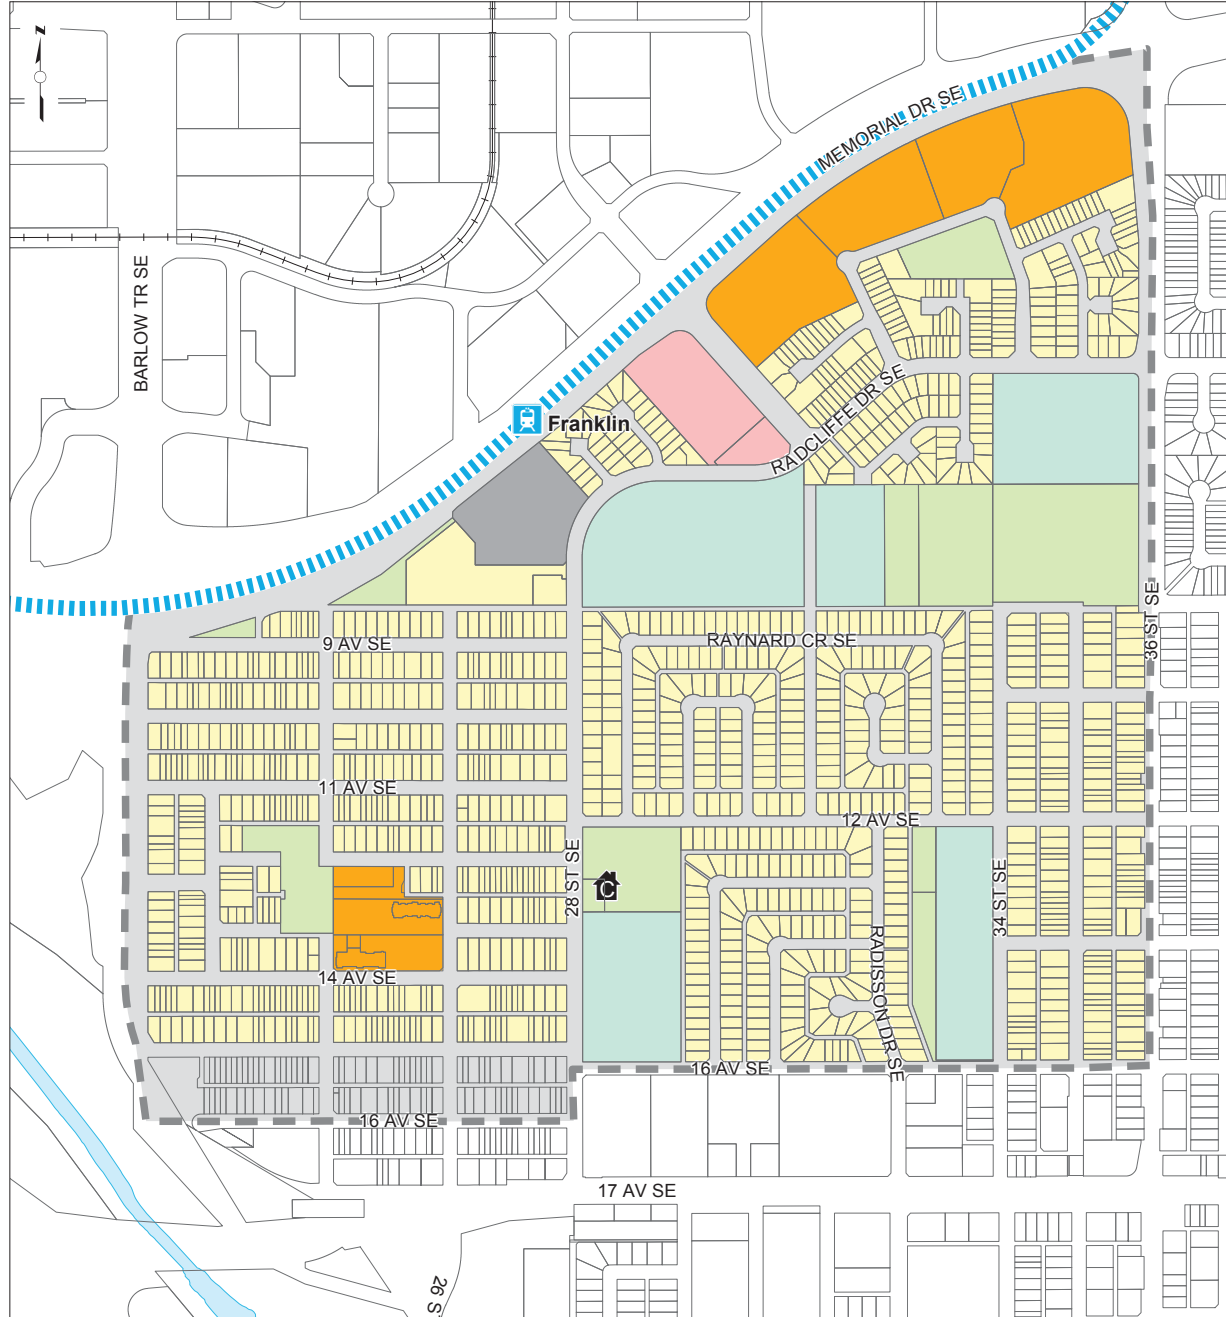

This part of the community, developed in the 1960's, utilizes a street system of crescents and cul-de-sacs and consists primarily of single family dwellings. It was subdivided into 50 by 120 foot residential lots and has well maintained properties and mature vegetation.

Specific issues in Area 3:

- A portion of this area bounded by 28 Street and Raynard Crescent S.E. (Site 2, Map 3) is designated R-2 and RM-4 and is developed with single-detached, duplex, fourplex and townhouse dwellings that are relatively well maintained. The present designations are not considered suitable for this location due to the predominance of single and two family dwellings in this area.

■ **Area 4 (Northern Part of the Community Centered Around Radcliffe Drive)**

Developed in the late 1970's, this area utilizes a street system of crescents and cul-de-sacs and has a wide range of dwelling units including single-detached dwellings, duplexes, townhouses and apartments. While it is newer and generally well maintained, there are some initial signs of deterioration, lack of vegetation and insufficient property maintenance.

- Open Space, Park, School or Community Facility

Approved: 15P88
Amended: 3P2013

This map is conceptual only. No measurements of distances or areas should be taken from this map.

2.1.2 Objectives

To stabilize and improve the existing residential character of the community by:

- 1. correcting inconsistencies between existing land uses and land use district designations;
- 2. encouraging a compatible relationship between existing dwellings and infill development by means of residential infill guidelines;
- 3. discouraging commercial uses from intruding into the residential sectors of the community.

2.1.3 Policy

- 1. Existing DC sites are recognized except for Site 2, Map 5 (1327 - 28 Street S.E.).
- 2. Amended by **Bylaw 18P91**
- 3. Deleted by **Bylaw 17P92**

2.1.4 Special Policy Area

The Special Policy Area applies to the area shown on Map 3 and on the Redevelopment Concept. The site is the former home of the Albert Park School. The intent of this Policy Area is to provide for low to medium density multi-residential development that is compatible with the existing character of the neighbourhood. The site provides an opportunity for moderate intensification due to it being a large undeveloped parcel of land that is also within close proximity to local amenities including, the Franklin LRT Station, adjacent park space and the commercial area along 17 Avenue SE.

POLICIES**1. Land Use**

- a. New development within this area should be limited to low-rise multi-residential development and could include townhouses, apartments and live/work units.
- b. New development is encouraged to provide a range of unit sizes to meet the needs of different income levels, age groups and lifestyles.
- c. A limited range of support commercial uses may be suitable for the site. A land use amendment would be required in order to determine the appropriate range of uses, location and amount.

2. Building Form and Urban Design**Building Location and Orientation**

- a. Building orientation and placement (see Redevelopment Concept) should respect the existing development pattern in the neighbourhood, which predominantly aligns with the east-west avenues. This alignment should provide for east to west visual permeability through the site.
- b. Building layouts are encouraged to address key corners of the site and create a sense of place, while retaining a visual permeability through the site.
- c. The minimum building setback from a property line shared with a street or park should be a minimum of 3 metres. The building setback area may accommodate front yards, patios or landscaping.

Building Massing

- d. Development should have a maximum building height of 4 storeys and 14 metres.
- e. The overall mass of the building should be broken up with changes in building depth and facade finishing materials intended to provide vertical and horizontal articulation.
- f. Where a building is built to the 4 storey maximum, the top floor of the building should be stepped back a minimum of 3 metres along public streets and adjacent park frontage. The intent is to achieve a maximum of only 3 storeys along the public streets and adjacent park space. Other architectural and design techniques intended to minimize the mass of the building may be considered.
- g. Unless otherwise specified, buildings with frontages of over 70 metres in length should not be allowed. Long and uninterrupted buildings are discouraged as they can have a negative impact on the pedestrian realm and may provide less interest and variation at the pedestrian level.
- h. A building that is over 70 metres in length may be allowed along 12 Avenue SE provided the building articulation and mass is consistent with 2.1.4.2.(e).
- i. Buildings should be designed in a manner that minimizes shadowing on the park.

Building Interface and Character

- j. Units located closest to grade that front onto a public or private street or park require individual entrances directly connected to public or private sidewalks (see Redevelopment Concept).

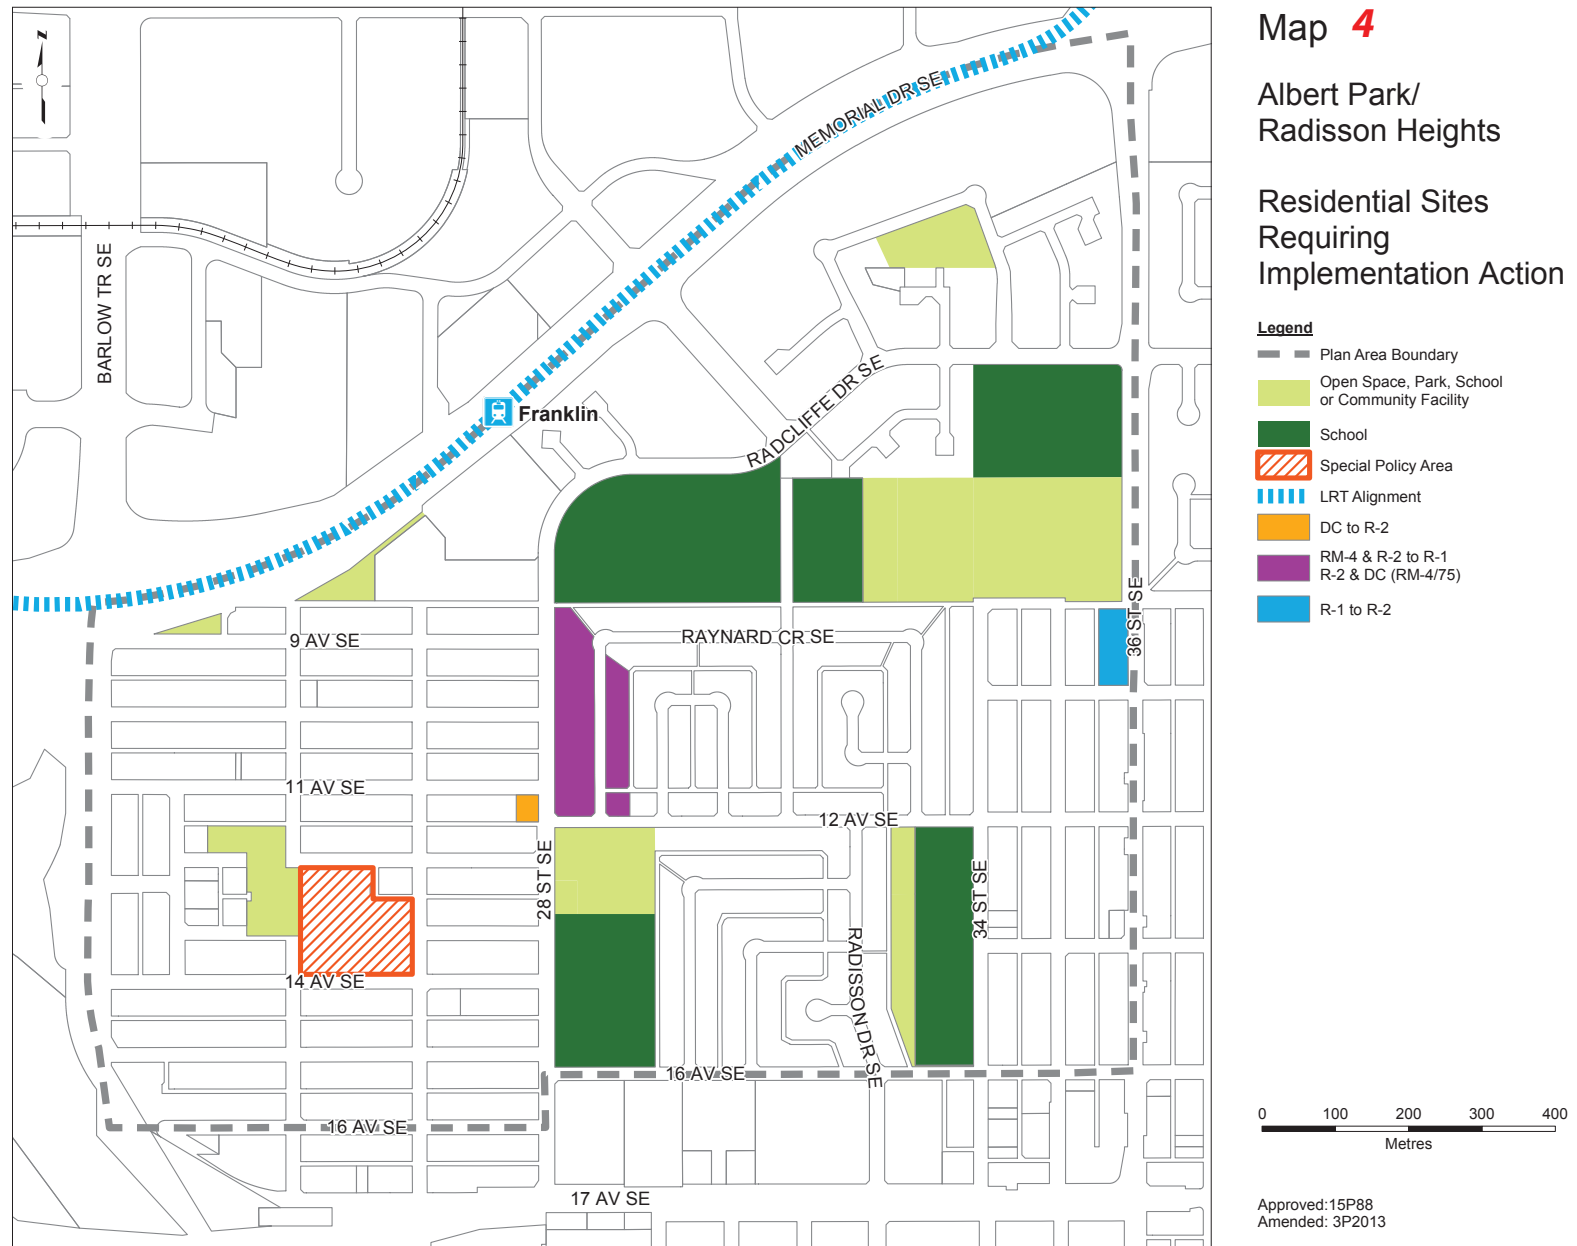

- k. Building facades should emphasise individual at grade units and unit entrances and should include features such as front doors, unit numbers as well as weather protection such as awning and canopies.
- l. Building facade articulation should be more detailed at the ground floors and at building corners.
- m. Blank building walls facing the park are not allowed. Building facades that face onto adjacent park should provide for “eyes on the park” by including features such as entrances, windows, patios and yards.

- n. Front yards with low fences, hedges or other design features should be provided for each ground floor unit in order to clearly define private amenity space from public or private environment.
- o. Durable materials should be used as building facade finish throughout the entire development.
- p. Quality materials as stone, brick or simulated stone should be used as the prominent building finish on the main floor of buildings.

3. Site Circulation and Access

- a. Pedestrian connectivity should be provided from the site to public sidewalks, the neighbourhood park and the transit stop along 14 Avenue SE. These pedestrian connections should not be gated.
- b. The internal vehicular network should be consistent in alignment and location with the established street and lane network in the neighbourhood.
- c. The primary access from 27 Street SE shall be in alignment with the 13 Avenue SE road right-of-way (see Redevelopment Concept). This street should be of a sufficient width to accommodate vehicular access (including emergency vehicles), parallel or angled parking, pedestrian sidewalks, as well as appropriate landscaping, lighting and street furniture.
- d. This street and its components shall be of a design and quality appropriate to accommodate ground floor units with direct access to and from private sidewalks.

- e. The existing laneway should be utilized for access to the site and may be upgraded at the cost of the developer and at the discretion of the Development Authority to support two-way traffic.
- f. No vehicular access to the site will be allowed from 26 Street SE except for emergency vehicles.
- g. No vehicular access shall be allowed directly from 12 Avenue SE, other than via the existing lane.
- h. At the discretion of the Development Authority, a vehicular access may be allowed along 14 Avenue SE.
- i. Underground parking is strongly encouraged to accommodate the majority of parking requirements.
- j. *Where surface parking is deemed appropriate it should only be located internal to the site and at the rear of a building and may not be located between the building face and a property line that abuts a street.* **Bylaw 3P2013**

2.1.5 Implementation

Bylaw 3P2013

To implement the residential land use policies, the following actions are required and where applicable, guidelines as noted shall be considered in reviewing development applications (see Map 3 for sites listed on Chart).

SITE	EXISTING DESIGN.	LAND USE POLICY	ACTION REQUIRED	DEVELOPMENT GUIDELINES
1	DC (for a private club)	Low Density Conservation/ Infill	This site should be redesignated to R-2 Residential Low Density District, which is in conformity with the surrounding land use district and permits a church use.	<i>The Low Density Residential Housing Guidelines for Established Communities shall be considered.</i> Bylaw 21P2008
2	RM-4 and R-2	Low Density Conservation/ Infill and Medium Density (for existing fourplex and townhouse dwelling units)	<p>The lots with existing single-detached dwellings should be redesignated from R-2 and RM-4 to R-1. The lots with semi-detached dwellings shall be redesignated from RM-4 to R-2.</p> <p>Those parcels with three four-plex dwelling units and two five unit townhouse developments should be redesignated from RM-4 to DC for those uses that exist at the time of the passage of this A.R.P. By-law and subject to the following guidelines:</p> <p><u>Land Use</u></p> <p>The land use shall be for fourplex dwelling units on lots with existing fourplex dwelling units (728, 732 and 736 Raynard Crescent) and for five unit townhouses on lots with existing five unit townhouses (716 and 724 Raynard Crescent).</p>	<p><i>For low density sites, the Low Density Residential Housing Guidelines for Established Communities shall be considered.</i></p> <p><i>The General Rules for Low Density Residential Land Use Districts contained in Part 5, Division 1 of the Land Use Bylaw and the General Rules for Multi Residential Land Use Districts contained in Part 6, Division 1 of the Land Use Bylaw and Rules Governing all Districts referred to in Part 3 and the applicable Uses and Rules referred to in Part 4 of the Land Use Bylaw shall apply.</i></p> <p>Bylaw 21P2008</p>
3	R-1	Low Density Conservation/ Infill	This block should be redesignated to R-2 Low Residential Low Density District.	<i>Low Density Residential Housing Guidelines for Established Communities</i> Bylaw 21P2008

3.0 Transportation

3.1 Context

Albert Park/Radisson Heights is bordered in the north, east and south respectively by Memorial Drive, 36 Street and 17 Avenue, which are expressways or major standard roadways designed to accommodate regional access to the Downtown as well as to employment, shopping and residential areas in east Calgary. Barlow Trail on the west side of the community, is a 4-lane roadway providing access to the Max Bell Arena and the local street system in Albert Park/Radisson Heights (11 Avenue S., 12 Avenue S., 15 Avenue S.).

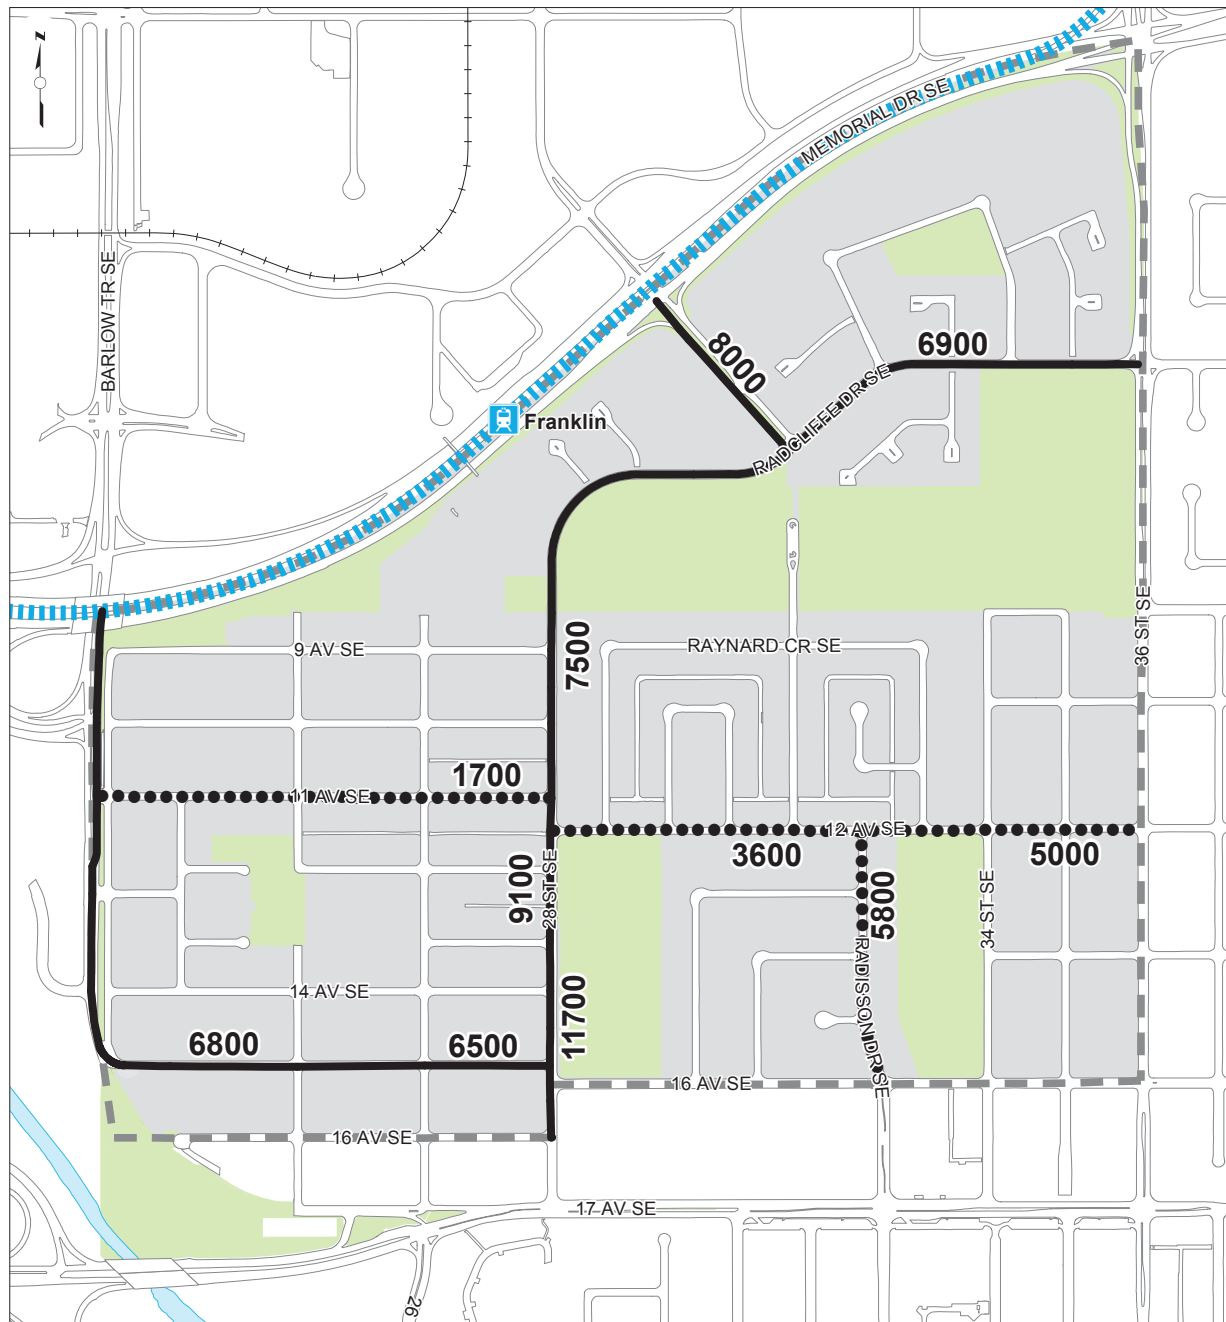

In general, although the above-noted boundary roads are providing good local access to homes and businesses in Albert Park/Radisson Heights, they are not functioning effectively as through traffic routes. For example, 36 Street E. on the east edge of the community, presently operates as a 4-lane divided roadway between Memorial Drive and 8 Avenue S. but narrows to 2 traffic lanes with on street parking between 8 Avenue and 16 Avenue causing a severe bottleneck, thereby encouraging the use of some community streets (e.g. 28 Street) for through traffic. On the west edge of the community, the absence of a continuous major road connection on Barlow Trail between Memorial Drive and 17 Avenue S. causes through traffic to be funnelled directly onto the local community street system on 15 Avenue S. and 28 Street E. In addition, 11 and 12 Avenues S.E. function as an east/west shortcutting traffic route. The streets with this shortcutting problem are shown on Map 5.

The extent of non-local traffic on these streets is shown on the accompanying chart.

Road	Status	Environmental Guidelines (VTD)*	Total Daily Volumes (1986)	Estimated Non-Local Trips (VTD)*
28 Street	Primary collector	**5,000-10,000	**8,000-11,700	2,000
15 Avenue	Collector	**1,000-5,000	6,800	2,000
11/12 Avenues	Collector	**1,000-5,000	**1,700-5,000	**500- 1,000

* VTD Vehicle Trips Per Day.
** A range of volumes.

- Specific Transportation Concerns
- The carriageway on the 2700 block of 11 Avenue S.E. is only 9.8 metres (32 feet) wide as compared to 11 metres (36 feet) for other streets in the community. The present road allowing 2-way traffic and parking on both sides, creates a traffic flow and safety problem. This problem is worsened by 11 Avenue functioning as a bus route. This transit route was requested by the community and supported by the Transportation Department. (Site 19, Map 5)
 - The residential area on 34 and 35 Streets between 16 and 17 Avenues S.E. is susceptible to noise, overspill parking and other impacts from the commercial uses on 17 Avenue, primarily the 17 Avenue Inn.
 - Although the community has a bikeway/pathway system, it is discontinuous and not fully signed. (Site 18, Map 6)

Map 5

Metres

Approved: 15P88
Amended: 3P2013

This map is conceptual only. No measurements of
distances or areas should be taken from this map.

3.2 Objectives

1. To discourage non-local traffic from using internal community streets for shortcutting by:
 - improving the capacity of roads on the edge of the community; and
 - considering traffic reduction measures for interior streets of the community as required.
2. To reduce the impact of commercial traffic on the adjoining residential areas.
3. To provide a connection for cyclists to the Franklin LRT Station.

3.3 Policy

1. Peripheral roads (36 Street S.E., Barlow Trail and 17 Avenue S.E.) should be upgraded as required to accommodate the demands of through traffic.
2. Modification to roads in the interior part of the community (28 Street, 15 Avenue and 11/12 Avenues) should be undertaken on a trial basis to reduce traffic shortcutting through the community.
3. Measures should be taken on the 2700 Block of 11 Avenue to improve traffic flow and increase safety.
4. Measures should be undertaken to reduce the impacts of commercial traffic on residential land use in the area of 34 and 35 Streets between 16 and 17 Avenues S.E.
5. Expand the cycle route system in the community to provide a connection to the Franklin LRT Station.

6. The roads in the community should retain their existing designations in accordance with By-law 3M82, as amended by By-law 64M84, the City of Calgary Transportation System By-law, as follows:

Expressways

- Memorial Drive

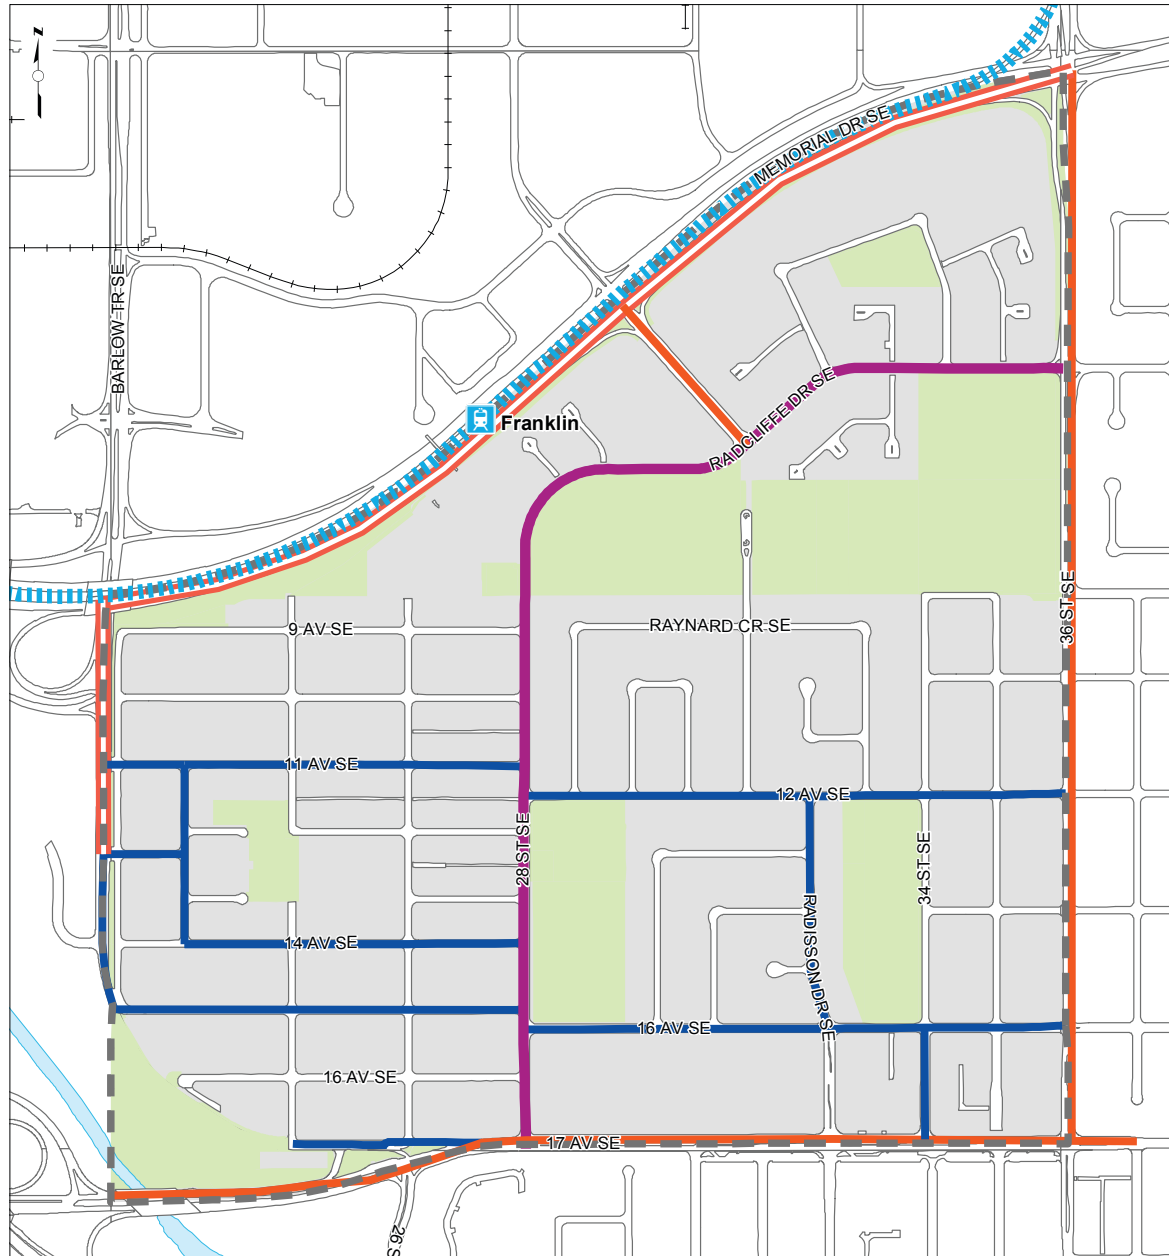

Major Roads

- 36 Street S.E.
- 17 Avenue S.E.
- Barlow Trail S.E. between Memorial Drive and 12 Avenue
- 28 Street S.E. between Memorial Drive and Radcliffe Drive S.E.

7. With the exception of those roads noted below as collector roads, all other roads in the community are local roads:

Collector Roads

- 11 Avenue S.E.
- 12 Avenue S.E.
- 14 Avenue S.E.
- 15 Avenue S.E.
- 16 Avenue S.E.
- 28 Street S.E.
- "Old" 17 Avenue S.E. between 26 and 27 Streets
- 25 Street S.E. between 11 and 14 Avenues
- Radcliffe Drive S.E.
- Barlow Trail S.E. between 12 and 15 Avenues
- Radisson Drive S.E. between 12 and 17 Avenues
- 34 Street S.E. between 16 and 17 Avenues

Metres

Approved: 15P88
Amended: 3P2013

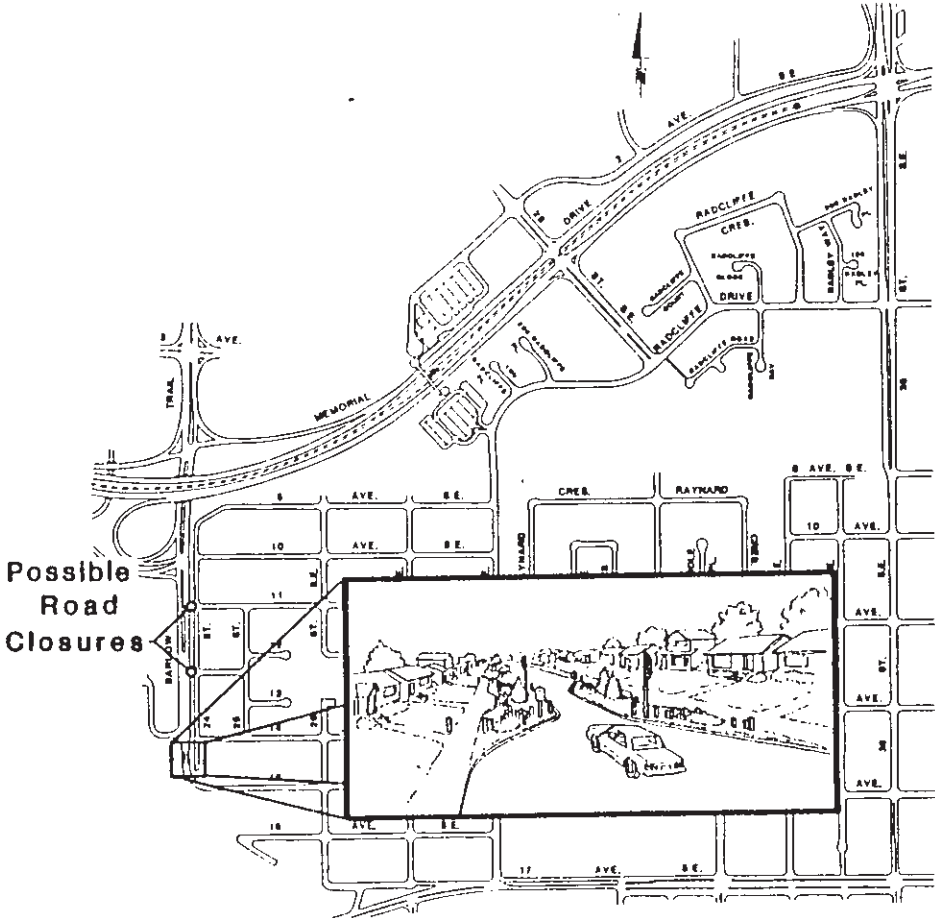

This map is conceptual only. No measurements of distances or areas should be taken from this map.

3.4 Implementation

To implement the transportation policy at the following locations, the following actions as shown on Map 7 are required:

SITE	ACTION REQUIRED
17	<div>Lane reduction on Barlow Trail</div> <div><u>Long Term</u></div> <div>The need for and possible timing of an extension of Barlow Trail southward from Memorial Drive to 17 Avenue S.E. and/or beyond will be reviewed in the Northeast/East Sector Transportation Network Study. Until this review is completed, a lane reduction device will be implemented on a trial basis on Barlow Trail S.E., south of the access to Max Bell Arena.</div> <div><u>Short Term</u></div> <div>The proposed lane reduction involves narrowing the width of Barlow Trail to create a short, one lane section of road. This is shown conceptually in Figure 1. The right-of-way between conflicting northbound and southbound traffic would be controlled by a traffic signal. Closure of the access points to Barlow Trail at 11 Avenue S.E. and 12 Avenue S.E. may be required to prevent shortcutting traffic from using other streets to avoid this measure.</div>
18	<div>Bikeways/Pathways</div> <div>It is proposed that 26 Street S.E. between the lane (north of 9 Avenue S.) and 10 Avenue S. be designated as an on-street bikeway and provided with the standard signage, which would then connect the existing pathway and bikeways both inside and outside the community.</div>

0 100 200 300 400 500
Metres

Approved: 15P88
Amended: 3P2013

[A new site 5 was added. Remainder of sites on maps 1, 5, 6, 9 and 10 were renumbered (Bylaw 18P91)]

This map is conceptual only. No measurements of distances or areas should be taken from this map.

SITE	ACTION REQUIRED
19	<p>Parking restrictions on the south side of the 2700 Block on 11 Avenue S.E.</p> <p>This proposal would remove the parking on the south side in this block for a trial period to increase safety for pedestrians and vehicle owners.</p>
20	<p>Lane reduction on 28 Street S.E.</p> <p>This proposal would narrow the width of 28 Street to one lane at the intersection of 13 Avenue and 28 Street E. as shown conceptually in Figure 1. Northbound and southbound traffic on 28 Street E. would be controlled by a traffic signal. The closure of 27 Street in the vicinity of 13 Avenue may be required to prevent shortcutting traffic from bypassing the restriction on 28 Street.</p> <p>In view of the experimental nature of the lane reduction as a device to reduce shortcutting traffic, it is recommended that only the Barlow Trail location (Site 16) be implemented at this time. If the Barlow Trail device proves to be successful as a traffic reduction measure and is supported by residents, an additional device on 28 Street S.E. could be installed following the trial period.</p>

4.0 Open Space and School Facilities

4.1 Context

Albert Park/Radisson Heights has six local park/open space sites and six school sites which provide recreational and educational facilities for the community. While the amount of open space per person is presently considered above the City's standard, residents, in a Needs and Preference Study (September 1986), identified the lack of quiet passive areas for picnics and relaxing as well as the provision of trees and shrubs in existing parks. There are several specific areas of concern:

- Most of the community parks, while providing grassed open space, older playground furniture and facilities for baseball and tennis, are devoid of trees, shrubs and irrigation systems.
- The Radcliffe Crescent Park open space is grassed and contains a few trees, but does not offer the opportunity for useful park activities to the large neighbouring residential population, because of a lack of park equipment.
- If the David D. Oughton School was declared surplus and disposed of for non-open space purposes, then the distribution of open space in the southeast area of the community would be adversely affected.

4.2 Objectives

1. To provide for the maintenance and improvement of the community open space and recreation facilities through the development of small passive recreation areas in existing parks and the upgrading of existing parks.
2. To ensure that an appropriate level of open space is maintained to meet the needs of the community.
3. To minimize any potential negative impacts on the community, if the David D. Oughton School is closed and declared surplus for educational purposes.

4.3 Policy

4.3.1 Radcliffe Crescent Park (Site 21, Map 7)

This park is considered the first priority for improvements. A plan for this site should be prepared in conjunction with neighbouring residents, and should address the need for a multi-use court, park furniture, an irrigation system and a passive park area.

4.3.2 Upgrading of the Existing Parks

Other community parks in the area should be upgraded with:

- the development of passive recreation areas that include shade trees, tables, benches, and garbage receptacles (this improvement is considered a priority for community parks before other improvements);
- the installation of irrigation systems;
- the possibility of planting of trees and shrubs along the edge of the parks;
- the development of shaded areas for ball diamonds, bleachers, and pathways to facilitate proper park maintenance; and
- that the community association and individual residents or groups, through programs such as Adopt-A-Park, be encouraged to assume some degree of maintenance responsibility for certain appropriate parks.

4.3.3 David D. Oughton School Site (Site 25, Map 8)

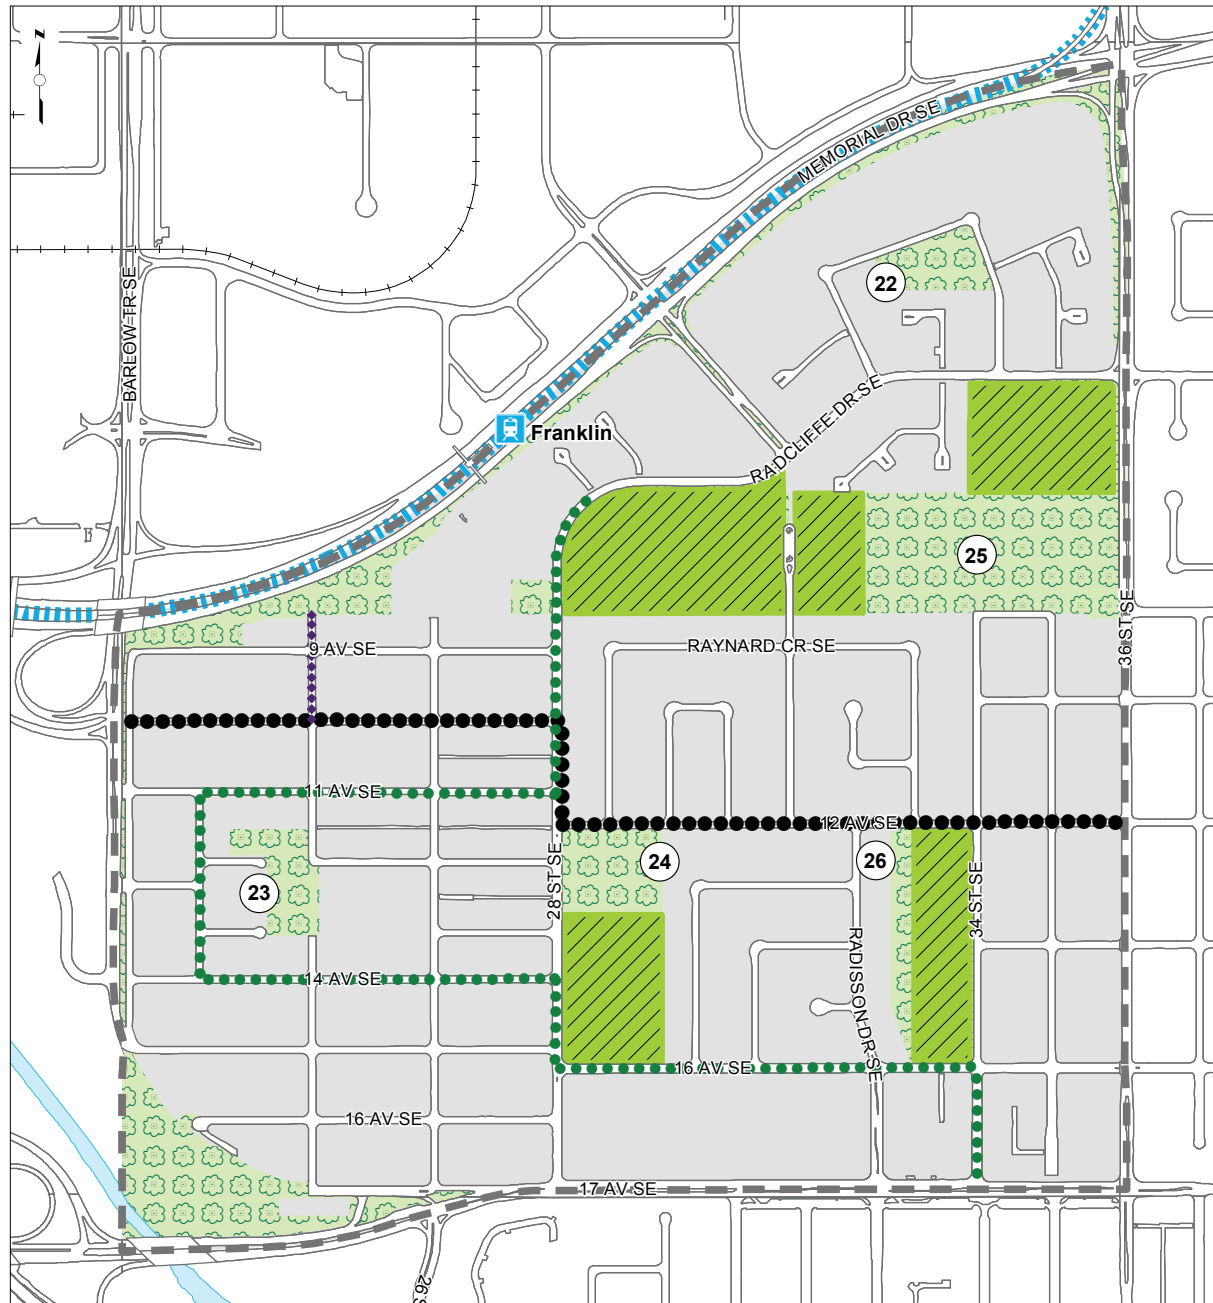

1. In order to maintain an adequate distribution of open space in the south-east area of the community, the acquisition of a portion of the David D. Oughton school site and the possible reconfiguration of adjacent City-owned lands should be considered should the school site be declared surplus for school purposes.
2. The Civic Administration should consult with the school boards and affected community members regarding any possible school closures. The City should offer input to the School Board relating to planning policies, population trends and community impact of a possible closure.
3. Should any school be declared surplus in the future, the community, the City Administration and the respective school board should consult each other to examine opportunities for redesigning the entire site for community related activities. Any redesign and renovation of the building should not be of a nature which would preclude the building's return to school use if the child population in the community returns to appropriate levels.

4.4 Implementation

To implement the open space and school policies, the following actions are required in the order of priority. Refer to Map 8 for site locations. It should be noted that timing for park improvements should be in accordance with existing Parks & Recreation budgetary priorities and constraints and shall be reviewed and incorporated with respect to existing A.R.P. implementation procedures.

SITE	LAND USE POLICY	ACTION REQUIRED	PRIORITY
21	Open Space	Park plan for a multi-purpose park should be prepared in consultation with neighbouring residents within one year of approval of the Plan.	FIRST
22-25	Open Space	Passive recreation areas (shaded area, benches, tables and garbage receptacles) are to be constructed in each community park.	<ul style="list-style-type: none"> Albert Park (2629 - 12 Avenue S.E.) Site 23 Community Hall Park (1310 - 28 Street S.E.) Site 24 Father Lacombe Park (819 - 36 Street S.E.) Site 25 David D. Oughton Park (3030 - 12 Avenue S.E.) Site 26
25	Open Space and School Site	<p>The City will consider acquiring a portion of the David D. Oughton School site for open space needs, if it is declared surplus.</p> <p>Upon acquisition, any portion of the site acquired with monies from the Reserve Fund, should be registered as reserve land.</p>

5.0 Social Perspectives

5.1 Context

As outlined in Section 1.1.3 of the Supporting Information, the community is above the city average in a number of special needs areas:

- single parent households;
- families with children (0-19 years) dependent on public assistance;
- senior citizens receiving income supplements;
- unemployment rates (particularly youth un-employment);
- low income residents; and
- crime rate.

5.2 Objective

To promote community vitality and stability through the provision of services and programs that address social problems.

5.3 Policy

To achieve the above noted objective, the need for several social programs should be examined:

1. The need for day care and more subsidized out-of-school child care programs to serve single parent families;
2. The need for greater senior citizens outreach in the community;
3. The promotion of employment services and programs and in particular those services and programs oriented to youth; and
4. The promotion of crime prevention programs such as Block Watch and the development of organized after-school activities.

5.4 Implementation

To implement the social programs identified in Section 5.3 the following actions are required:

ACTION REQUIRED

1. The Social Services Department should, for a three year trial period, subject to annual budget approval:
 - a. Provide the services of a single parent social worker, operating out of the Forest Lawn District Office, serving Albert Park/Radisson Heights and other surrounding communities. This staffing requirement should be reviewed on an annual basis.
 - b. Promote out-of-school care and day care programs in the community as part of the duties of the single parent social workers.
 - c. Provide through its Senior Outreach Program in the Forest Lawn area, improved information and programs to assist disadvantaged and low income senior citizens in the community.
 - d. Provide information and counselling for unemployed youth in the community.
 - e. Promote the establishment of programs for youth in the community including recreation programs in conjunction with the Parks & Recreation Department.
 - f. Evaluate the above social programs at the completion of the three year period.
2. The Calgary Police Service should assist the Community in maintaining the Block Watch program and establishing other crime prevention programs.

6.0 Community Identification Program

6.1 Context

It is generally recognized that certain parts of the community are in a state of decline due to inappropriate zoning, neglect of local parks and the shortcutting of non-local traffic. As well, there is a general perception that property maintenance in the community has declined.

6.2 Objectives

1. To establish distinctive community attributes.
2. To improve the perception of the community as a desirable place to live.
3. To enhance pride in the community on the part of residents.

6.3 Policy

The Albert Park/Radisson Heights community should, with the assistance of the Planning and Building Department:

- develop a community identification program which would include the assessment of improvements and associated costs (some examples of which are listed in the Supporting Information section [pages 82, 83 and 86]), a schedule for implementation and a public participation program;
- investigate alternative sources of funding for implementing such a program.

6.4 Implementation

The community identification program should be financed, implemented and maintained by the Community Association.

Preface

This section provides background information to the recommendations and preparation process of the Albert Park/Radisson Heights A.R.P. Its purpose is to describe the context within which planning for the A.R.P. has been formulated. This section is not part of the A.R.P. and has no legal status.

1.0 Context for Planning

The Albert Park/Radisson Heights A.R.P. addresses a range of land use, transportation, parks and social issues in a comprehensive manner.

The major issues relate to:

- minimizing adjacent incompatible land uses;
- reducing shortcutting of non-local traffic; and
- curbing neighbourhood decline.

Other issues include upgrading local parks; addressing the social needs of before and after school care, unemployment and seniors programs; providing for a community identification program, and improving the quality of infill development.

1.1 Community Profile

1.1.1 Historical Development

Albert Park was developed on land originally used for ranching and farming. Initial planning for the area occurred around the turn of the century during a land boom that spread across western Canada.

Albert Park was named after Albert Smyth who, along with his fellow business partner, a Mr. McCullough, promoted what was to be an exclusive subdivision including parks, a lake, windmills, race tracks and gardens. The "Smyth Slough," which was to be made into a lake, was the focal point of the proposed development (Map 1). At that time a twenty-five foot lot was priced at \$300.

In 1912, with lot sales lagging due to poor transportation to the area, Smyth and McCullough came up with a clever scam to market the lots. They laid down railway ties from Calgary to central Forest Lawn and started a false rumour of streetcar construction. The scam was discovered, the railway ties were used for firewood and these would-be developers disappeared. The first transit system did not occur until 1921 when a horse and buggy operation commuted people to Calgary. Settlement of Albert Park was slow and when factories closed during World War I, a lot could be obtained for \$11-\$25.

Gilbert Estate, the area between 34 and 36 Streets and 8 and 17 Avenues was developed after 1908. The current numbered street system originally had names as follows:

1986	1908
34 Street	Oughton Street
35 Street	Gilbert Street
16 Avenue	Henniker Avenue
14 Avenue	Boswell Avenue
12 Avenue	Perkins Avenue
10 Avenue	Douglas Avenue
8 Avenue	Walker Avenue

In 1934, Albert Park, Gilbert Estates, Forest Lawn and Hubalta were incorporated into the village of Forest Lawn. When the total population reached 1,850 in 1952, the village obtained town status. In 1961, the Town of Forest Lawn with a population of 13,000 was annexed to Calgary.

Radisson Heights, south of 8 Avenue was developed between 1964 and 1967. Radisson Village (the area north of 8 Avenue) was developed between 1976 and 1980.

DATE: **MAY 1989**

1.1.2 Demographic Characteristics

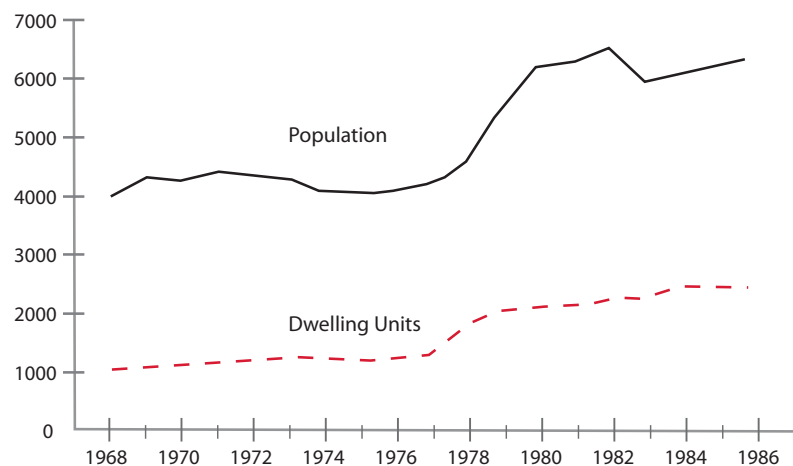

1.1.2.1 Population and Occupancy Rates

The population of Albert Park/Radisson Heights has increased dramatically by approximately 60%, from 3,995 in 1968 to 6,411 in 1986 (Figure 1). The most dramatic increase in the community occurred between 1977 and 1986 when that part of the community north of 8 Avenue was developed.

The number of dwelling units in the community increased by 134% from 1,038 in 1968 to 2,431 in 1986.

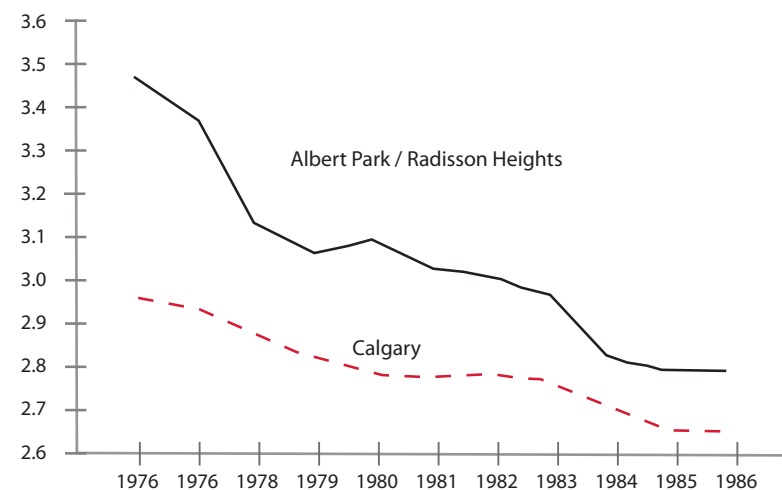

The occupancy rate (number of persons per occupied dwelling unit) has gradually been declining from 3.46 to 2.78 between 1976 and 1986 while the overall city rate decreased from 2.95 to 2.64 persons per unit (as shown in Figure 2). This general decline is attributable to a lowering of the birth rate.

Figure 1: Population and Dwelling Units — 1968 - 1986

Source: Corporate Resources Data from 1977 & 1986 Civic Census

Figure 2: Occupancy Rates — 1976 - 1986

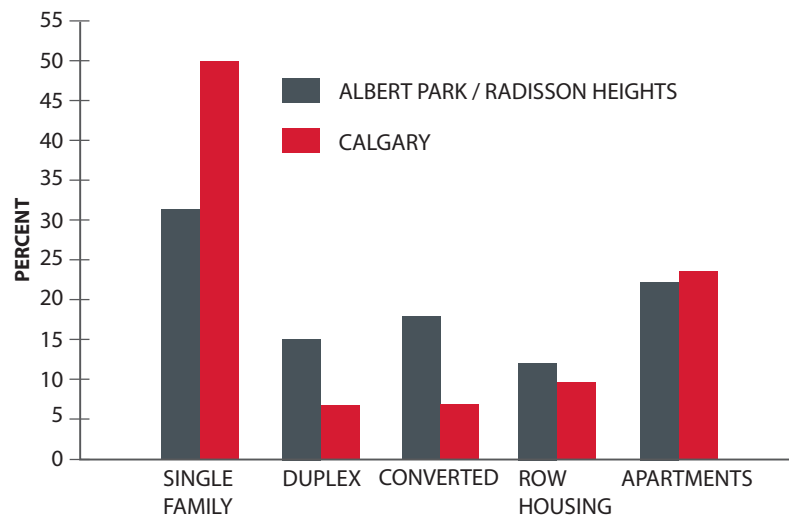

Source: Corporate Resources Data from 1977 & 1986 Civic Census

1.1.2.2 Dwelling Unit Mix

Single family dwellings are the predominant housing type in the Albert Park/Radisson Heights community, accounting for 31.6% of the total number of units (Figure 3). This is substantially lower than the city average of 50%. The higher proportion of duplexes and converted structures* in the community accounts for this difference. As is the case in Calgary as a whole, apartments are the second most prevalent type of dwelling unit. The number of dwelling units in the community increased by 134% from 1,038 in 1968 to 2,431 in 1986 (Figure 1).

Figure 3: Dwelling Unit Mix

Source: Corporate Resources 1986 Civic Census

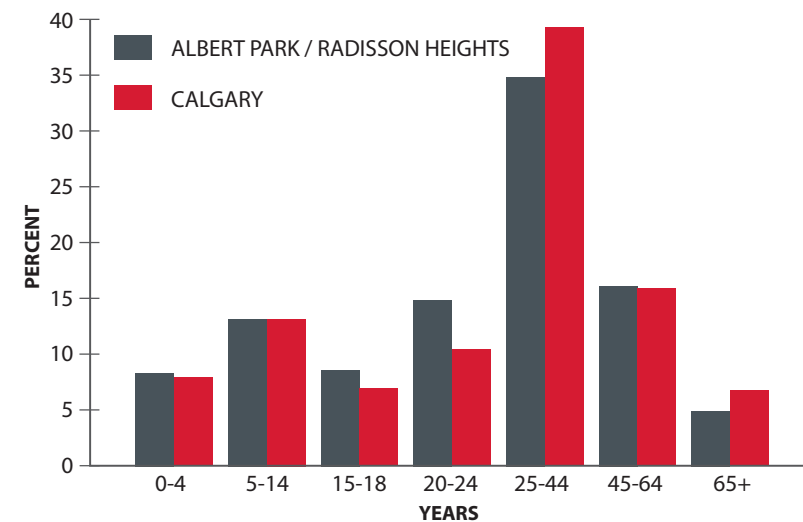

*A converted structure is a structure originally built as a single family house and now containing more than one unit or a structure originally built as a duplex and now containing more than two units.

The 1981 Statistics Canada Census shows that almost 50% of the dwelling units were constructed after 1970 and only 4.5% prior to 1946.

1.1.2.3 Age Structure

Albert Park/Radisson Heights has a similar breakdown in age groups to that of the city of Calgary, with the highest proportion of persons in the 25-44 year old category (Figure 4).

Figure 4: Age Groups

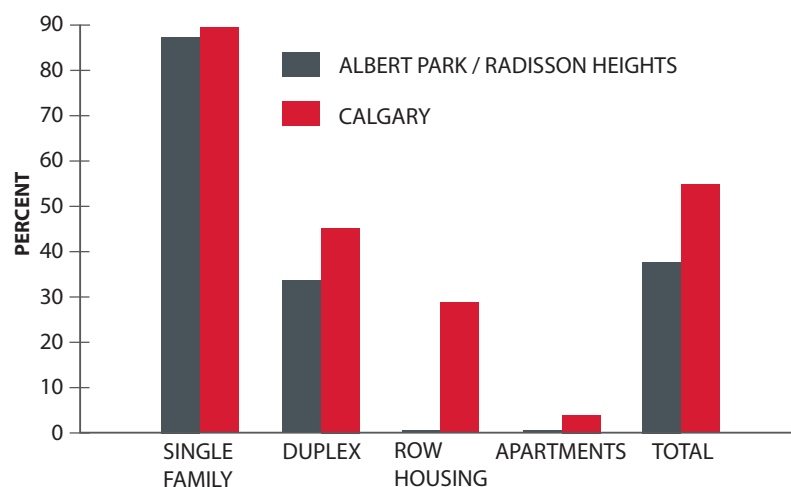

Source: Corporate Resources 1986 Civic Census

1.1.2.4 Home Ownership

The level of owner occupied dwelling units is an important measure of community stability. The percentage of owner occupied dwellings in the community is 37.5% as compared with a 55.2% city average. This difference relates to a higher rate of more mobile renters living in duplex and row housing units. As illustrated in Figure 5, the percentage of single family home ownership in the community (87.3%) is very similar to the Calgary rate (89.4%).

Figure 5: Home Ownership of Occupied Dwelling Units

Source: Corporate Resources 1986 Civic Census

1.1.3 Social Perspectives

1.1.3.1 Single Parent Families and Out-of-School Care

The 1981 Census of Canada indicates that in the Albert Park/Radisson Heights community, approximately 25% of those families with children living at home, are headed by a single parent. By comparison, the percentage of single parent families for the city of Calgary is 17%. This difference is confirmed by the 1986 Civic Census which shows that there are nearly twice as many single adult households with dependent children in the community than in Calgary as a whole.

Currently there are only two private out-of-school care programs in Albert Park/Radisson Heights with a combined capacity of 24 children. None of the schools in the community provide organized after school programs.

There are two day care centres in Albert Park/Radisson Heights located at 2839 - 12 Avenue S.E. and 39 Radcliffe Crescent S.E. accommodating 158 children.

1.1.3.2 Employment

The high percentage of unemployed is a concern in the Albert Park/Radisson Heights community.

The 1981 Census of Canada figures show a higher rate of unemployment for males and a lower rate for females in the community when compared with the city rates as shown in Figure 6.

Youth (15-24 years old) comprise 23% of the 1986 population of Albert Park/Radisson Heights compared with 17% of the total population of Calgary. With youth unemployment rates in Alberta currently averaging about 5-6 percentage points higher than adult unemployment rates, youth unemployment is potentially a serious problem in the community.

Figure 6: Unemployment Rates

Age Group	Albert Park/ Radisson Heights		Calgary	
	Female	Male	Female	Male
15 - 24 years old	4.5	7.0	4.7	5.4
25 years and over	2.4	3.1	3.1	2.0

The 1981 Census of Canada showed that a higher proportion of Albert Park/Radisson Heights males compared with males in the total city labour force held jobs in construction, trades and manufacturing occupations while a lower proportion held managerial, administrative and related positions as shown in Figure 7.

The employed females in the community displayed a similar distribution as the females in the city as a whole with the exception of a higher proportion of females in Albert Park/Radisson Heights (21%) employed in service occupations than Calgary females (14%).

Figure 7: Occupational Groups

Source: 1981 Census of Canada Information by Community District for Calgary.
Table 1. Selected Population, Dwelling, Household and Family Distributions, showing Selected Social and Economic Characteristics 1981
Based on 20% sample data.

1.1.3.3 Income

The residents of Albert Park/Radisson Heights generally have a lower income rate than that of the city population. Between 1976 and 1984 the median income¹ of the community was significantly lower than the city of Calgary level. With a city-wide median index value of 100.0, Albert Park/Radisson Heights' index of median income from 1976 to 1984 was as follows:

1976	93.7	1981	84.7
1977	93.5	1982	78.0
1978	87.9	1983	73.6
1979	86.7	1984	81.9
1980	85.8		

In 1986, 13.5% of the Albert Park/Radisson Heights population (0-64 years of age) received Social Allowance compared with 5.4% of the Calgary population (0-64 years of age). Of the total population of children and youth (0-19 years old) in the community, 20.1% were members of families in receipt of social allowance. In contrast only 7.8% of children and youth in the city of Calgary were members of families dependent on social allowance.

¹This information is based on reported income levels with the city of Calgary median income level of 100. A median falls in the middle of a distribution with an equal number of cases above and below it.

1.1.3.4 Senior Citizens

In 1986, senior citizens (65 years and older) comprised 4.7% of the population of Albert Park/Radisson Heights compared to 6.7% of the overall city population. A higher proportion of the community's seniors (59.9%) than Calgary's seniors (36.5%) received the federal Guaranteed Income Supplement in June 1987.

1.1.3.5 Crime Rate

The community of Albert Park/Radisson Heights has generally higher rates of crime (per 1000 population) than the city as a whole. The following table provides a comparison of crime rates for the community and the city for selected property related offences in 1986.

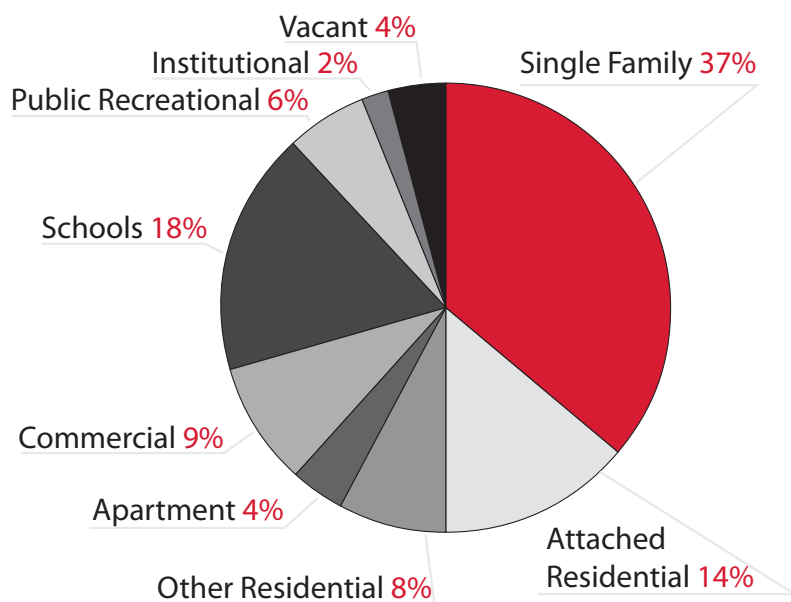

Figure 8: 1986 Crime Rate Per 1000 Persons (Selected Statistics)

Offence	Number	Albert Park/ Radisson Hts	Calgary	Comparison Rate (+/-)
Forgery	60	9.4	1.1	+8.3
Car Prowling/ Theft	140	21.8	13.7	+8.1
Shoplifting	75	11.7	6.2	+5.5
Car Prowling/ Vandalism	81	12.6	7.4	+5.2
Auto Theft	35	5.5	2.2	+3.3
Vandalism	38	5.9	3.0	+2.9
Break & Enter (Home)	57	8.9	6.1	+2.8

1.1.4 Existing Land Use

The Albert Park/Radisson Heights A.R.P. study area contains approximately 175 gross hectares or 432 gross acres. The distribution of land uses is illustrated in Figure 9.

Figure 9: Land Use Distribution

Source: Planning & Building Department 1986

1.1.4.1 Residential

■ Low Density Residential

Albert Park/Radisson Heights is primarily a low density residential community, characterized by single-detached (single family), duplex, semi-detached and townhouse dwelling units. These residential uses account for approximately 59% of land use in the community.

■ Medium Density Residential (Apartments)

Apartments in the community constitute 4% of the land use. They are generally four storey, walk-up apartments, and located:

- adjacent to Memorial Drive;
- between 16 and 17 Avenues, between Radisson Drive and 36 Street;
- in the southwest part of the community adjacent to the Bow River escarpment.

1.1.4.2 Commercial

Commercial land uses which make up 9% of the land area are primarily located on the north side of 17 Avenue S.E. between 26 and 36 Streets. These commercial uses include a shopping centre, retail stores, a bank, restaurants, offices, a hotel and automotive services.

Another commercial area (approximately 2 hectares/5 acres) is located at 28 Street and Radcliffe Drive. This area includes offices, restaurants and retail stores.

A vacant site on the west side of 35 Street S.E. between 16 and 17 Avenues is currently used for parking for the 17 Avenue Inn. It is zoned residential and is considered to be a commercial intrusion into a residential area. Its historic use as a parking lot however, ensures its status as a legal, non-conforming use.

There is a retail-office-apartment condominium development located on the southeast corner of 16 Avenue and Radisson Drive S.E. It has eleven storeys which is made up of one retail storey at-grade, three office storeys and seven residential storeys with 133 dwelling units. The height is 22 metres (72.5 feet).

1.1.4.3 Open Space, and School Facilities

Open space and school facilities are two of the most significant features of this community. Albert Park/Radisson Heights is well served with school facilities (Figure 10). There are no school closures anticipated at this time in the community. Open space and schools comprise 22% of the land area in the community. There are six local park/open space sites and six school sites with a total of approximately 24 net* hectares (59 acres), 19.141 hectares (47.30 acres) of which is City-owned. Based on a 1986 population of 6,411 persons, there are approximately 3 hectares (7.4 acres) of open space per 1,000 persons. This is well above the Calgary General Municipal Plan guideline of 1.8 hectares per 1,000 persons.

* The net area excludes non-functional open space such as building sites, parking areas and visual relief.

Three of the school sites (Albert Park Elementary, David D. Oughton Elementary and Holy Family Elementary) are owned by the respective school boards so are not included in the open space calculation.

1.1.4.4 Vacant Land

Approximately 4% of the land use (2 hectares/5 acres) is vacant land. Most of this category consists of a parcel of City-owned land adjacent to the Franklin LRT Station.

1.1.4.5 Park and Ride Site

The Franklin L.R.T. Park & Ride site (2 hectares/ 5 acres) is located at the junction of 28 Street and Radcliffe Drive. It provides 300 parking stalls.

Figure 10: Open Space and School Sites

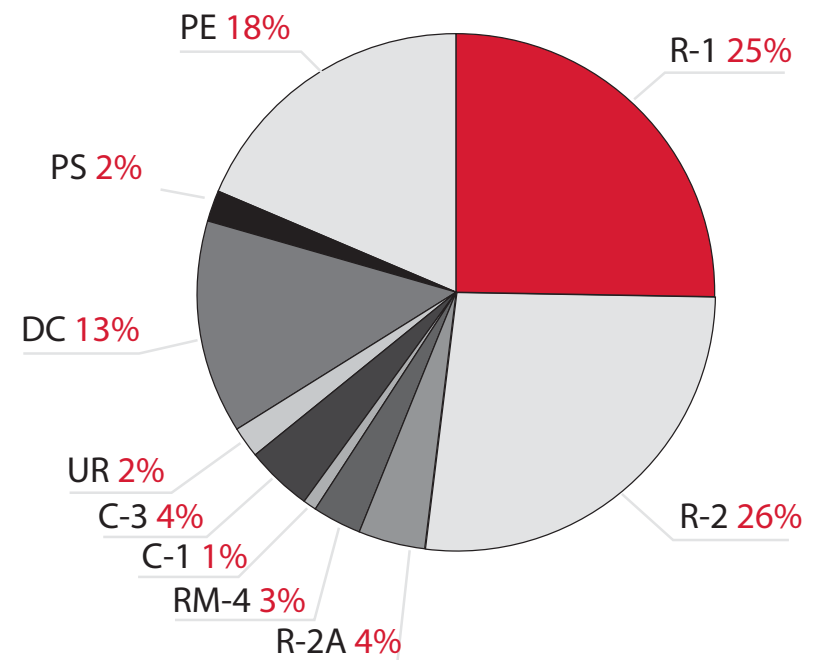

SITE	LOCATION	OWNERSHIP	LAND USE DESIGNATION	SITE AREA		FACILITIES

1.1.5 Existing Land Use Districts

Map 2 shows the existing Land Use Designations (zoning) in place at the time of the A.R.P. preparation and Figure 11 shows the percentage of each designation in the Albert Park/Radisson Heights Community.

Figure 11: Existing Land Use Districts

Source: Planning & Building Department 1986

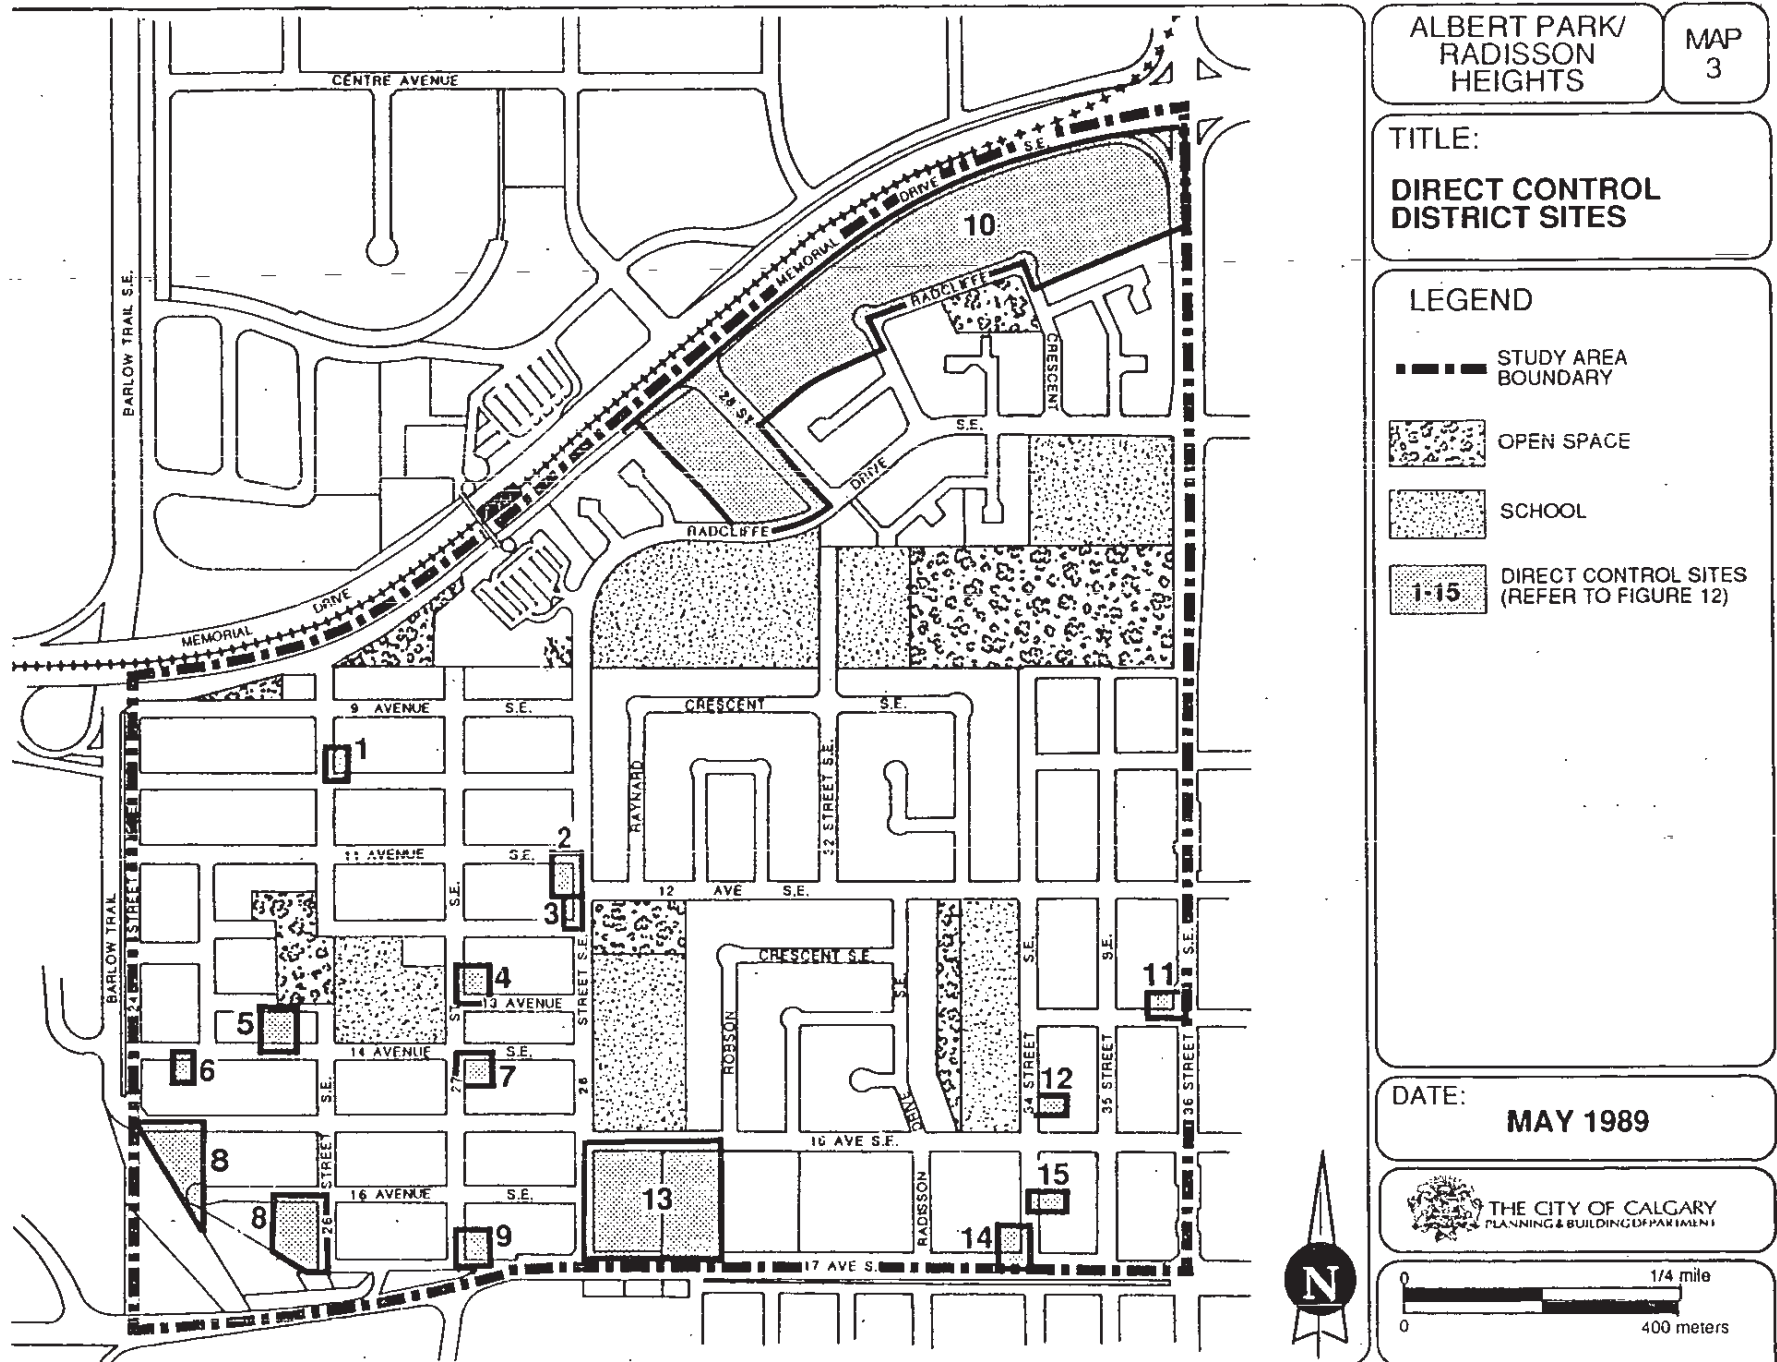

1.1.6 Existing Direct Control District Sites

Figure 12 and Map 3 identifies those sites designated DC which comprise approximately 13% of the land area. These sites have all been developed according to the approved development guidelines except for a private club at 2839 - 11 Avenue S.E. (By-law 8269) and the Forest Lane Shopping Centre at 3012 - 17 Avenue S.E. (By-law 187).

Figure 12: Direct Control District Sites (Refer to Location on Map 3)

SITE NUMBER	BY-LAW NO.	DATE OF APPROVAL	ADDRESS	APPROVED USE	DEVELOPED TO ALL DC GUIDELINES
1.	8238	71/06/07	2704 - 10 Avenue S.E.	3 Unit Apartment	Yes
2.	8269	71/07/26	1237 - 28 Street S.E.	Private Club	No (excluding paving & shrubs)
3.	89Z82	82/05/10	2848 - 12 Avenue S.E.	Triplex	Yes
4.	483	76/11/8	2804 - 13 Avenue S.E.	7 Unit Townhouse	Yes
5.	26Z80	80/05/13	2620 - 14 Avenue S.E.	6 Unit Townhouse	Not Developed
6.	485	76/11/9	2513 - 14 Avenue S.E.	3 Unit Townhouse	Yes
7.	774	78/11/6	2801 - 14 Avenue S.E.	2-6 Unit Apartment	No (less 4 parking stalls)
8.	348	75/11/10	2611 - 15 Avenue S.E. 2623 - 16 Avenue S.E.	Seniors Housing	Yes
9.	399	76/05/10	2806 - 17 Avenue S.E.	Frozen Food Locker	Yes
10.	384	76/03/08	40 & 44 Radcliffe Crescent S.E.	Multi-Family Dwelling & Local Commercial	Yes
11.	624	77/11/15	1339 - 36 Street S.E.	4 Unit Townhouse	Yes
12.	367	75/12/8	1524, 1528 & 1530 - 34 Street S.E.	Single or Two Family Dwellings	Yes
13.	187	74/04/8	3012 & 3072 - 17 Avenue S.E.	Neighbourhood Shopping Centre	No (incomplete parking areas)
14.	234	74/08/12	3460 - 17 Avenue S.E.	Local Commercial Shopping Centre	Yes
15.	7281	81/01/19	1718 - 34 Street S.E.	Residential uses under RM-4 and non-medical office uses in the existing residential structure.	No (parking not screened)

1.1.7 Existing Transportation System

1.1.7.1 Introduction

The street system within the Albert Park/Radisson Heights Community Plan area incorporates several types of roadways with separate functions and particular standards. The community is bordered on the north by Memorial Drive, which is an expressway and by 36 Street and 17 Avenue on the east and south respectively - both major roadways (see Map 7). Barlow Trail on the west functions as a major road. These perimeter roads are intended to provide optimum capacity for through traffic within East Calgary as well as travel to Downtown and cross-town destinations.

Within the interior of the community is a network of primary collector and collector roads which function as main access routes to the community and distribute traffic to local residential streets.

1.1.7.2 Transit Service

The community has adequate transit service; an L.R.T. station is located in the north of the community, a feeder bus route (#26) connects the central part of the community to the L.R.T. station and route 1 on 17 Avenue S.E. caters to patrons in the south part of the community.

1.2 Issues and Concerns

1.2.1 Neighbourhood Conservation

Conservation and stabilization of the existing low density neighbourhood character is a major objective of this planning process. Many residents consider the area to be a very desirable place to live because of the ample provision of schools and open space, the proximity to Downtown, to shopping facilities, to employment opportunities and to major access routes into and out of the City. In addition, the slopes and the Bow River escarpment provide good views of the Downtown, the Bow River valley and the mountains.

1.2.2 Land Use Considerations

1.2.2.1 Residential

Throughout the planning process, residents have expressed the desire to have their community protected and stabilized as a low density residential area. Specific problems are:

- the decline of the visual appearance of the community as evidenced by inadequate property maintenance of some dwellings and properties as well as by weeds and garbage in lanes;
- the prevalence of illegal dwelling units particularly fourplexes, in that part of the community west of 28 Street. These dwelling units are perceived by residents as having insufficient on-site parking spaces and garbage receptacles which makes parking on the street and maintaining a good visual appearance in their vicinity, severe problems;

- the increase in the number of rental units in the community and the parallel increase in absentee ownership of dwellings. Residents have requested that land use changes be implemented to encourage the construction of single family dwellings when redevelopment occurs;
- the redevelopment of dwelling units that are incompatible with existing dwellings on the block. Residents have identified examples of inappropriate small lot (25 foot) infill and standard lot (50 foot) infill developments (e.g. 2716 - 12 Avenue S.E.);
- the multi-family dwellings on Raynard Crescent, that are poorly maintained, are in an inappropriate location, and bring excessive traffic into the heart of the community;
- in the vicinity of the private club at 1237 - 28 Street, there are problems with people who abuse the surrounding residential properties by parking in front of driveways, throwing beer cans on the neighbouring lawns and streets, and partying into the "wee" hours of the morning. In addition, the site has never been developed to the approved DC guidelines regarding parking and landscaping;
- the intrusion of commercial land uses into the residential area and the separation of commercial and residential traffic;
- there are complaints that people in the vicinity of the 17 Avenue Inn (the old Forest Lawn Hotel - 3608 - 17 Avenue S.E.) are "noisy and rowdy", use foul language and cause damage to dwellings and property. At the conclusion of a series of block meetings with residents of the adjoining apartments and dwelling units, they requested the adoption of the following measures to address the problem:
 - close the north-south lane at the south end between 34 and 35 Streets and between 35 and 36 Streets;

- complete the partial closure of 35 Street between 16 and 17 Avenues directly north of the east-west lane;
- review the conditions of the licenses granted to this hotel by the City of Calgary and the Alberta Liquor Control Board;
- postpone any upgrading of the building and property until this problem of the hotel has been addressed to the satisfaction of residents and property owners in the vicinity. (Further information will be found under the commercial sections).

1.2.2.2 Commercial

- Business people are concerned about the poor image of the 17th Avenue commercial area, characterized by inadequate landscaping and building maintenance.
- Some businesses are concerned that traffic reduction measures in the residential area will reduce the traffic to their business.
- Some property owners on the west side of 36 Street between 16 and 17 Avenues have requested a change in land use to permit commercial land uses.
- The Forest Lane Shopping Centre has parking and landscaping requirements attached to the land use approval that have not been complied with.

1.2.2.3 Open Space, and School Facilities

It is generally felt that the amount of open space provided in the community is satisfactory. In a Needs and Preference Study residents have identified the following concerns: the lack of passive park areas (tree shade, benches, tables and garbage receptacles), the need to redistribute playground equipment and to upgrade the existing parks.

Although school closures are not anticipated in the near future, the disposal of the David D. Oughton school site for other than open space purposes would adversely affect park distribution in the south-east section of the community. Further, the 400 metre walking distance to a school could not be met in this portion of the community.

1.2.3 Transportation

1.2.3.1 Shortcutting of Traffic

Transportation and traffic related problems have been a major concern of residents for many years. These concerns relate primarily to the shortcutting of non-local through traffic on residential streets, and residential parking. This shortcutting problem is rooted in the accumulation of a number of historic decisions related to the roads which serve this community. These decisions include:

- the discontinuance of the Barlow Trail connection to Blackfoot Trail and 17 Avenue S.E.;
- the traffic flow restrictions on 36th Street S.E.;
- the physical layout of streets in the community; and
- the approval of sites for development adjacent to the community.

Three routes through the residential community have been identified (Map 7) as primary shortcutting routes:

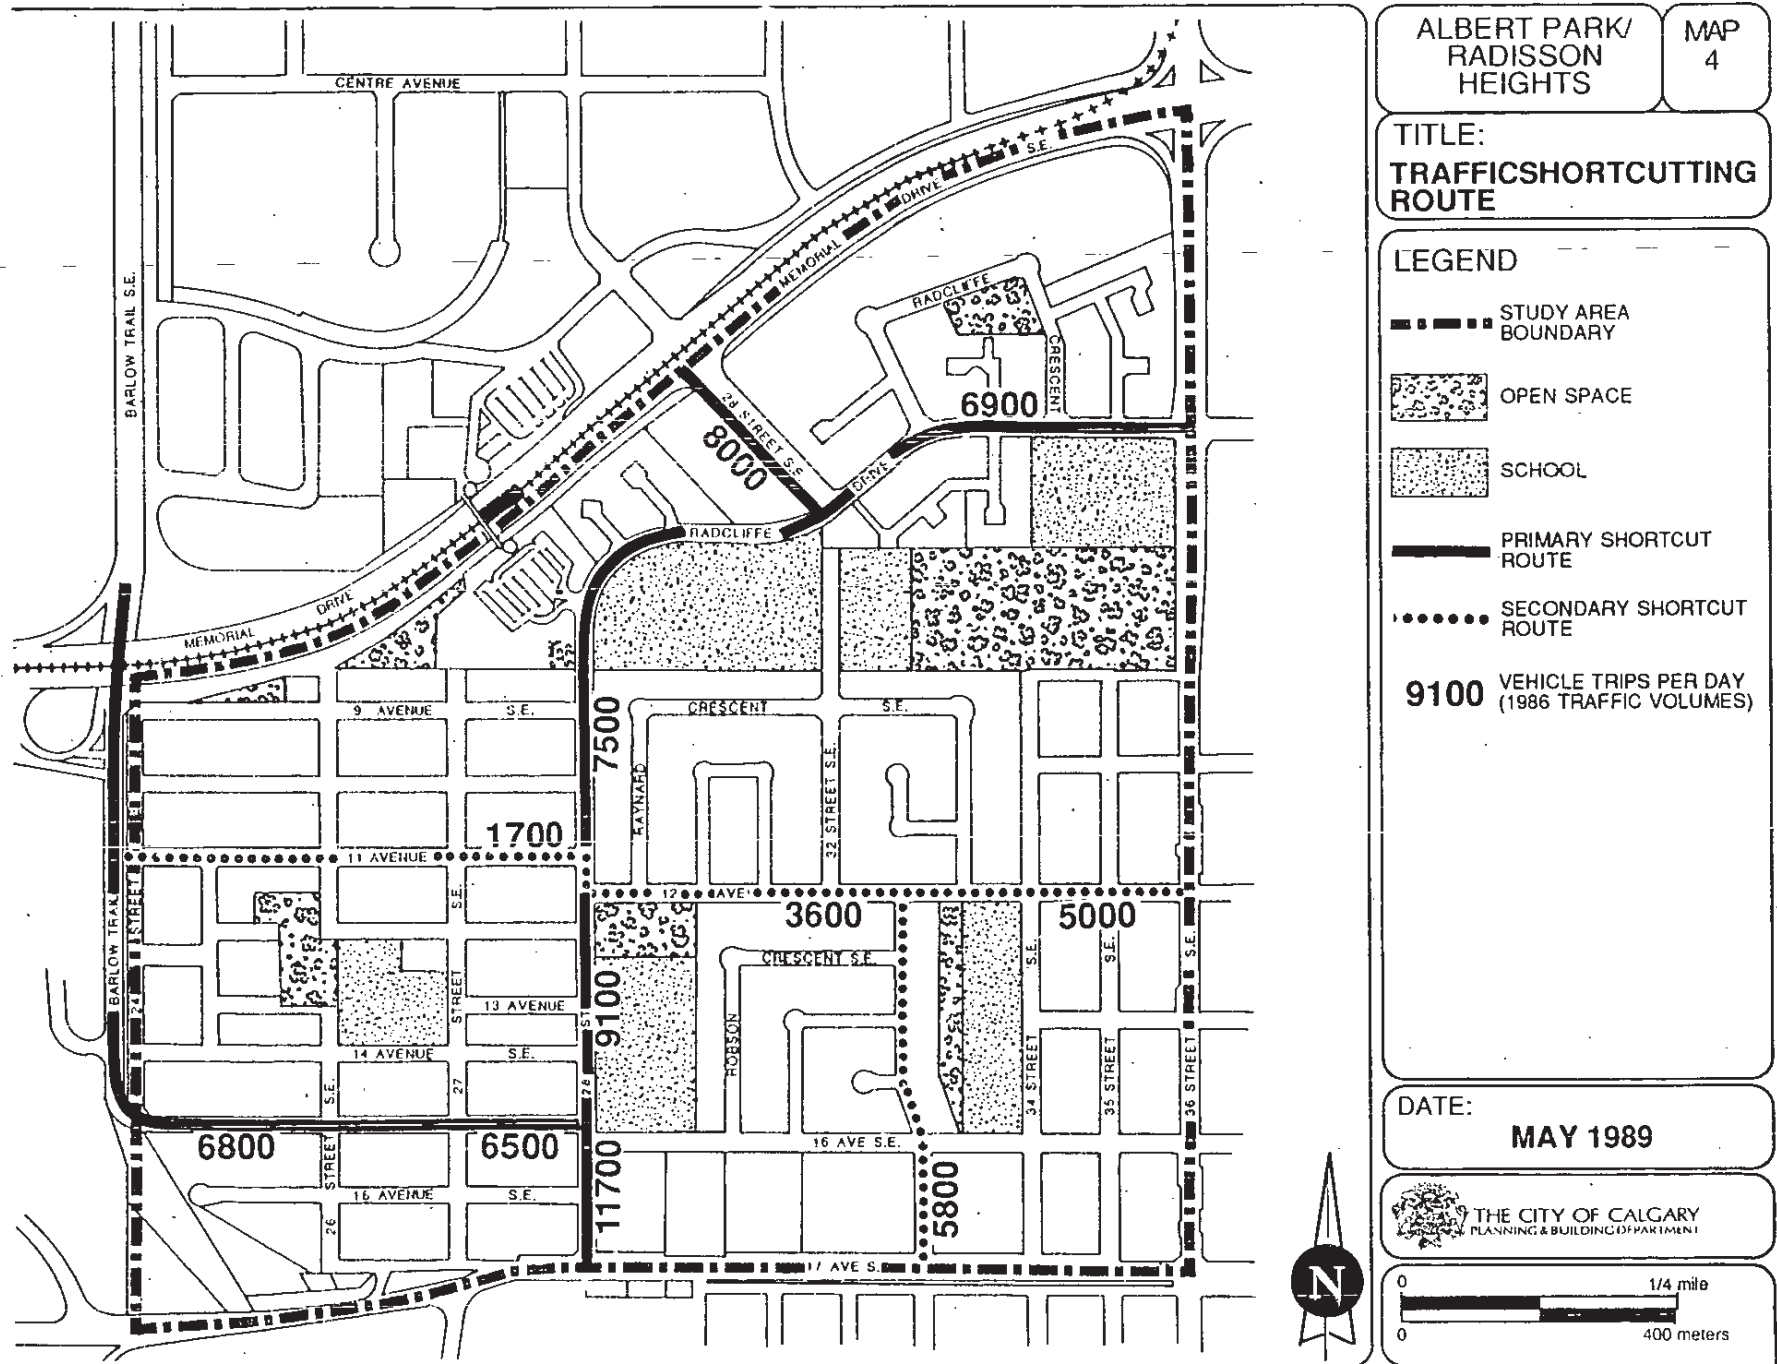

- a. A north-south route begins at Barlow Trail (south of Memorial Drive) and follows 15 Avenue and 28 Street to 17 Avenue. The Transportation Department estimates that of the existing 6,500 to 6,800 vehicles per day (v.p.d.) using this route, approximately 2,000 - 3,000 v.p.d. comprise non-local shortcutting trips.
- b. A second north-south route begins at Memorial Drive and uses 28 Street to connect to 17 Avenue. Of the approximately 7,000 to 9,000 v.p.d. on 28 Street north of 15 Avenue, approximately 1,500 to 2,000 are estimated to be shortcutting traffic.
- c. An east-west route begins at Barlow Trail and follows 11 and 12 Avenues to connect to 36 Street. The shortcutting component is estimated at 500 - 1,000 v.p.d. There is evidence that the existing traffic signals at the intersection of 36 Street and 12 Avenue S.E. are attracting through traffic into the community from Forest Lawn.

1.2.3.2 Parking

Residents also have raised concerns about a shortage of residential parking in the area west of 28 Street caused by what is thought to be a large percentage of multi-dwelling units. Residents in the vicinity of Father Lacombe High School and the Max Bell Arena have identified that access and egress from their driveways and parking in front of their properties is a problem when the school is in use or the arena is filled near capacity.

1.2.3.3 Safety

Concerns have been raised regarding safety on 28 Street between 12 and 15 Avenues. The location of the Community Centre, a junior high school and day care on this section of road that has considerable slope makes crossing this road a concern especially during winter conditions.

1.2.3.4 Bus Routes

A further problem raised by residents is related to the operation of the bus route (Route 26) on 11 Avenue between 26 and 27 Streets. The roadway carriageway in this block is 34 feet, 2 feet narrower than the adjacent blocks. This condition, combined with the on-street parking on both sides of the roadway, makes meeting oncoming buses and vehicles hazardous, particularly in winter time when the roadway is icy or snow covered.

1.2.3.5 Traffic Noise and Air Quality

Residents identified acceleration noise from trucks, buses and cars on 28 Street as a problem particularly where residences front on the street. They have requested a review by Calgary Transit to determine the feasibility of using smaller, quieter buses on this route. Residents also identified an air pollution problem in the vicinity of the eastbound Memorial Drive ramp at Barlow Trail, resulting from diesel trucks having to stop at the Barlow Trail intersection.

1.3 Policy Direction

1.3.1 The Calgary General Municipal Plan (1978)

The Albert Park/Radisson Heights Community is identified as an inner suburban community in the “General Plan” with the following policy guidelines:

"It is particularly important that the character and integrity of the inner suburbs be protected. For the most part the inner suburbs are stable areas having a housing stock in good condition. Unwarranted intrusions of inappropriate land uses into these areas should be prevented wherever possible.

In specific instances where there may be justification for some change in land use policy, such a change should be investigated through appropriate planning processes such as the area redevelopment plan process." (3.3.61)

"Area redevelopment plans for developed areas should:

evaluate the appropriateness of the existing traffic system to a local district, and ensure the separation of high-speed through traffic from local internal traffic;" (3.4.27)

1.3.2 Forest Lawn Design Brief (1975)

The Forest Lawn Design Brief identified land use, open space, and transportation policies for a number of communities in the greater Forest Lawn area one of which was Albert Park/Radisson Heights. Policies included:

- maintaining Albert Park/Radisson Heights as a low to medium density family residential area;
- ensuring medium densities (90 p.p.a.* with a height limit to 28 feet) be restricted to the transition zone (between 16 and 17 Avenues);
- closing roads adjacent to 28 Street and 36 Street for open space purposes;
- classifying 28 Street, 16 Avenue and Radisson Drive south of 16 Avenue as collector roads with the balance designated as local roads.

1.3.3 17th Avenue S.E. Functional Planning Report (Calts Series 35)

This functional planning report, approved by Council in 1976, outlined a two stage set of improvements to 17 Avenue S.E. The first stage of improvements has already been implemented and included road closures for parking, construction of left turn bays and medians, the removal of power poles.

1.3.4 Residential Parking Zones

City Council has a residential parking restriction policy that has established the criteria for those neighbourhoods experiencing on-street parking problems. The criteria are:

- a. The development in question (e.g. Father Lacombe High School or the Max Bell Arena) must generate more than 5,000 vehicle trips per day.
- b. The area experiencing parking problems is at least ten city blocks or forty block faces.

* 90 p.p.a. currently translates into the RM-4 (Medium Density Multi-Dwelling) district.

2.0 Background to Recommended Policies

2.1 Residential Land Use

2.1.1 General Residential Land Use Policies

The residential land use policies presented in this Plan are intended to achieve a variety of objectives as outlined below:

- **To Provide for a Variety of Housing Types**

It is important to ensure that there are a variety of housing options available in the community. The provision of areas zoned R-1, R-2, R-2A, RM-4, C-3(23) and C-3(27) allow for the development of single-detached homes, duplexes, infill housing, townhousing and apartments. By providing these opportunities, it is hoped that a suitable living situation can be found by everyone wishing to live in the community.

- **To Encourage Stability**

The R-1, R-2 and R-2A districts provide for a stable low density environment. These designations along with other measures (a community identification program - see Section 2.6) will encourage physical and environmental improvements and community stability. While maintaining the existing low density residential uses, this Plan also recommends selective down-zonings to reflect the existing residential uses.

- **To Encourage Compatibility**

It is important that the relationship between existing detached and semi-detached dwellings and infill developments, between residential and commercial uses and between the “new” and the “old” be handled as sensitively as possible. The inclusion of development guidelines and special land use rules would encourage this compatibility.

2.1.2 Specific Residential Land Use Policies

■ Residential Single-Detached (R-1)

A large R-1 area in the community is bounded by 28 Street, 16 Avenue, 34 Street and Raynard Crescent. Small pockets of R-1 exist in the vicinity of Radcliffe Road, Radcliffe Place and Radley Way. These areas are stable and will retain their R-1 designations.

The lots on the west side of Raynard Crescent and the east side of 28 Street north of 12 Avenue with single family dwellings are proposed for redesignation from RM-4 and R-2 to R-1 because they contain single family dwellings and are surrounded by single family dwellings.

■ Residential Low Density (R-2 & R-2A)

The retention of existing R-2 and R-2A Districts throughout the area provides for the opportunity to maintain stability in the community. This district allows for the retention of single family dwellings, conversion of existing single family dwellings to two family dwellings, duplexes and 7.5 metre (25 foot) lot infill development. To ensure compatibility of proposed infill development with existing dwellings, use of the Infill Housing Guidelines for Established Communities (1988) is recommended. The guidelines would be applied by the Approving Authority in the review of development permit applications for infill development.

Lots on Raynard Crescent with two family dwellings are proposed for redesignation from RM-4 to R-2 to conform to the low density surrounding uses.

All of 36 Street is zoned R-2 with the exception of the 900 block which is zoned R-1. The land use is to be redesignated from R-1 to R-2 as most of the block has been converted to two family dwellings.

Mike's Welding Shop (11 Avenue and 24 Street) will continue to be a non-conforming use.

■ **Medium Density Policy (RM-4)**

This plan will retain the majority of the existing RM-4 medium density districts which typically provides for apartment forms of development of up to 148 units/ha (60 units/acre). However, development of a wider variety of housing forms, such as triplexes, fourplexes and townhouses, in combination with specific guidelines is also encouraged in this area. Those lots on Raynard Crescent with four and five unit residential buildings are proposed for redesignation to Direct Control (DC) for the existing use only.

■ **Vacant Lot (1715, 1719, 1723 - 35 Street)**

This vacant parcel on the west side of 35 Street is presently used for parking for the 17 Avenue Inn. It is a commercial intrusion into a residential area but the historic use of the site for parking (prior to annexation) will permit it to remain a legal but non-conforming use. It will be redesignated to permit residential uses and parking for the hotel.

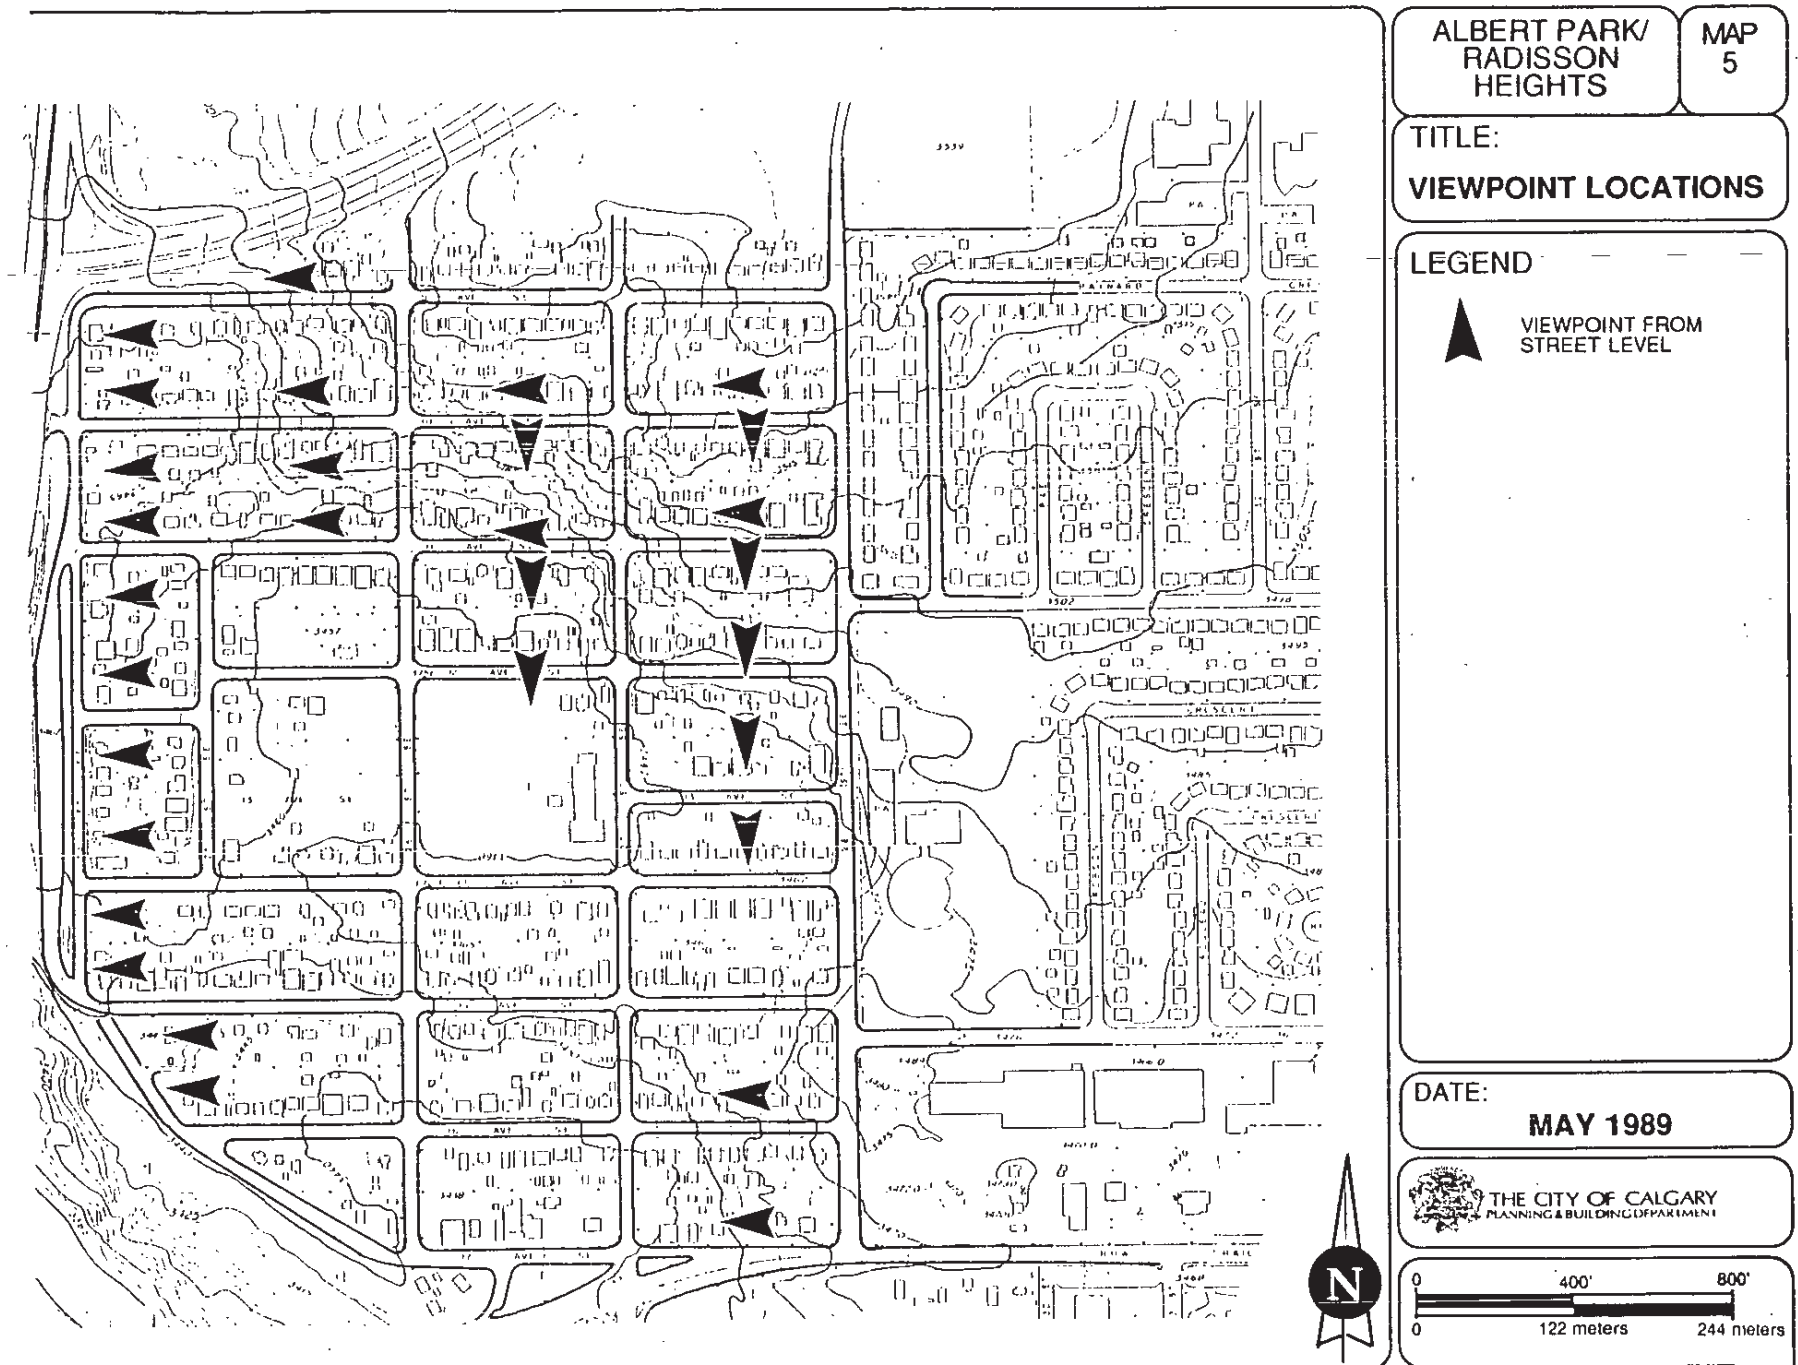

■ **Views**

Albert Park/Radisson Heights provides excellent views of the Bow River escarpment, the Downtown and the mountains. Map 5 identifies those locations in the community where views from street level are significant. The Approving Authority should take these potential views into consideration when approving development permits for residential development in this part of the community.

2.2 Proposed Land Use Districts

A limited number of redesignations to the community land use districts will occur to provide more compatibility between land uses. **The resultant Land Use Districts for Albert Park/ Radisson Heights are shown on Map 6.**

Note: Map 6 was deleted

2.3 Open Space and Schools

Albert Park/Radisson Heights residents have adequate open space for their recreational needs, according to City guidelines. However, the acquisition of a portion of the David D. Oughton School site, if it were to be closed and sold for non-open space purposes, would be required to maintain an equitable distribution of open space in the southeast part of the community.

Possible park improvements are outlined below and the Plan encourages the involvement of residents living in the vicinity of each park in the design.

■ Radcliffe Crescent Park (27 Radcliffe Crescent) S.E.

- irrigation
- passive recreation area (tables, benches, garbage receptacles) (Figure 13)
- tree planting
- playground equipment and bicycle rack
- multi-use court
- signage

■ Albert Park (2629 - 12 Avenue S.E.)

- irrigation
- remove existing curb and gutter and street foundations
- passive recreation area (tables, benches, garbage receptacles and tree shade)
- re-arrange playground equipment
- tree planting
- signage

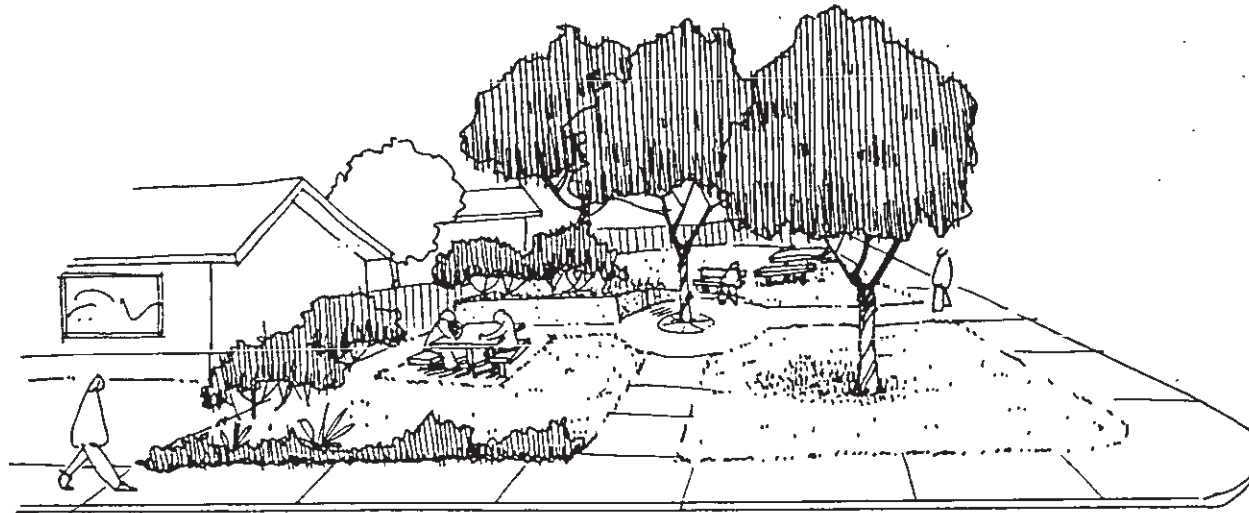

■ Community Hall Park (1310 - 28 Street S.E.)

- irrigation
- relocate the ball diamond, shade the infield and add bleachers and back stop
- passive recreation area (benches, tables, garbage receptacles and tree shade)
- tree planting
- signage
- Father Lacombe Park (819 - 36 Street S.E.)
- irrigation
- passive recreation area (benches, tables, garbage receptacles and tree shade)
- tree planting
- signage

■ David D. Oughton Park (3345 - 12 Avenue S.E.)

- upgrading the P.E. portion of the site with a passive recreation area (tree shade, benches, tables and garbage receptacles)
- improvements to existing tot lot equipment.

Figure 13: Passive Park Concept

2.4 Transportation

This Plan addresses solutions to the traffic shortcutting problem and a number of other transportation related concerns.

2.4.1 Improvements to the Shortcutting of Traffic Problem

The proposed transportation improvements include:

- adjustments to the traffic signals on 17 Avenue S.E. and 36 Street S.E.;
- interim improvements to 36 Street S.E. (parking restriction and intersection re-alignment) until a four lane divided road can be constructed between 8 Avenue and 17 Avenue; and
- lane reduction measures on Barlow Trail S.E. and 28 Street S.E. and associated measures.

These improvements are aimed at reducing the shortcutting of non-local traffic on local residential streets. The modifications to interior streets of the community are recommended only because ultimate improvements to 36 Street are not slated for immediate implementation due to other budgetary priorities.

■ Lane Reduction on Barlow Trail S.E.

The Barlow Trail location is being recommended for implementation at this time because the traffic analysis undertaken by the Transportation Department indicates that the magnitude of shortcutting traffic is higher than on 28 Street S.E. (i.e. 2,000-3,000 v.p.d. versus 1,500-2,000 v.p.d.).

A lane reduction was recommended instead of a road closure on Barlow Trail S.E. in the vicinity of 15 Avenue S.E. The road closure alternative would involve closing the road south of the entrance to the Max Bell Arena as shown on Figure 14. The existing community access points to Barlow Trail from 11 and 12 Avenues S.E. may be closed under this alternative to prevent shortcutting traffic from being diverted to other community streets. The advantages that the lane reduction alternative has over the road closure alternative are:

- access to the community from Barlow Trail is maintained;
- a balance between two main access points (Barlow Trail and 28 Street S.E.) is maintained;
- the transfer of non-local traffic to 28 Street S.E. is avoided; and
- 15 Avenue S.E. is made a less desirable shortcutting route by creating a time penalty for both non-local and local traffic.

■ Lane Reduction on 28 Street S.E.

It is proposed that the lane reduction scheme on 28 Street S.E. be considered for implementation following the introduction and evaluation of a similar device on Barlow Trail S.E. south of the entrance to the Max Bell Arena. This will allow the Transportation Department to monitor the effectiveness of this concept as an anti-shortcutting measure.

Another alternative which was not recommended, is the mixed vehicle/pedestrian mall concept. It would require the narrowing of the existing roadway on 28 Street and having the two driving lanes weave in an "S" form as shown on Figure 15.

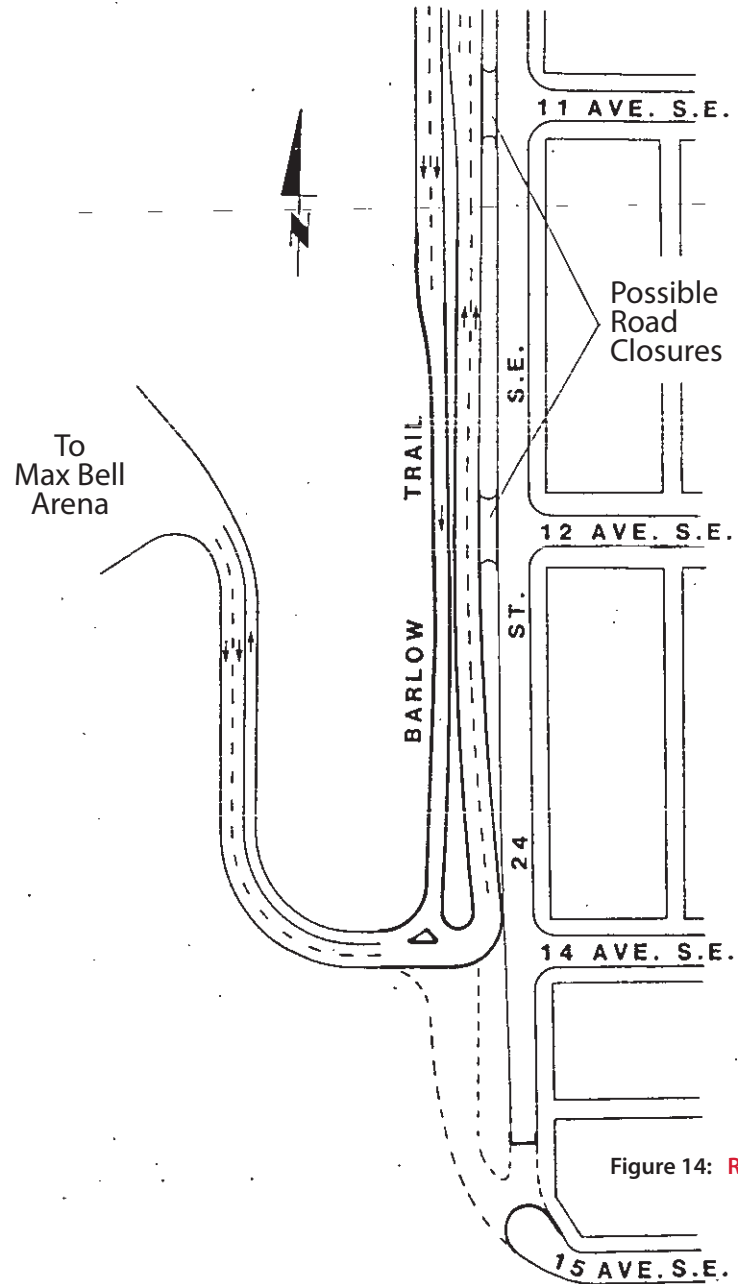

Figure 14: Road Closure Proposal / Barlow Trail

2.4.2 Other Transportation Issues

■ **Parking restrictions - 11 Avenue S.E.**

Parking restrictions on the south side of the 2700 block on 11 Avenue S.E. were selected over restrictions on the north side because the properties on the south side all have lane access.

For example, it is anticipated that the additional traffic generation and turning movements which would result from a full connection of Barlow Trail to the existing “Tee” intersection of 17 Avenue and 26 Street S.E. (see [Map 6](#), page 39) would cause capacity problems at this location. The increase in traffic volumes which would be experienced on Barlow Trail, south of Memorial Drive and 26 Street S.E. south of 17 Avenue S.E. would also result in additional noise exposure for adjacent residential properties.

As an alternative to a full connection of Barlow Trail to 17 Avenue S.E. the Transportation Department has considered an option which would provide for right turns only to and from 17 Avenue S.E. Although this option would provide for a better intersection operation, it would not accommodate the demand for southbound to eastbound travel around the community. Consequently, it would have only a marginal effect on shortcutting traffic levels on 15 Avenue S.E. Additionally, when viewed in the context of the overall transportation network, it is unlikely that this option would significantly alleviate existing or anticipated capacity constraints in the transportation system. On this basis, it is regarded as a poor investment as a solution to shortcutting traffic and overall transportation network issues.

In conclusion, it is the opinion of the Transportation Department that the resolution of shortcutting traffic and transportation network issues in Albert Park/Radisson Heights can best be addressed through consideration of a high capacity structure connection to 17 Avenue S.E. and/or the Deerfoot Trail. Both alternatives would remove most of the shortcutting traffic from the community as well as relieve future traffic congestion on the major road system. It must be emphasized however, that due to the projected high cost (approximately \$20 to \$30 million) neither option is considered to be practical or feasible at this time as a solution to community shortcutting issues. An extension of Barlow Trail is also not required to accommodate travel demands anticipated within the 10 year time frame of the current Transportation Improvement Priority Study (T.I.P.S.). On that basis, it is suggested that the need for this roadway could most appropriately be examined through the Northeast/East Sector Transportation Network Study, which will assess the future transportation requirement for the area between Peigan Trail, the north city limits, Deerfoot Trail and the east City limits.

■ **Vehicular noise on 28 Street in the vicinity of 12 Avenue S.E. where there is residential frontage.**

Sound level measurements were conducted on 28 Street S.E. in the vicinity of 12 Avenue during August and September 1986. The measurements on both occasions at [64 dB(A) were somewhat higher than the City guideline of 60 dB(A)]. While the noise level is in excess of City standards, it is not feasible to provide noise attenuation measures (in the form of a wall) due to front access requirements.

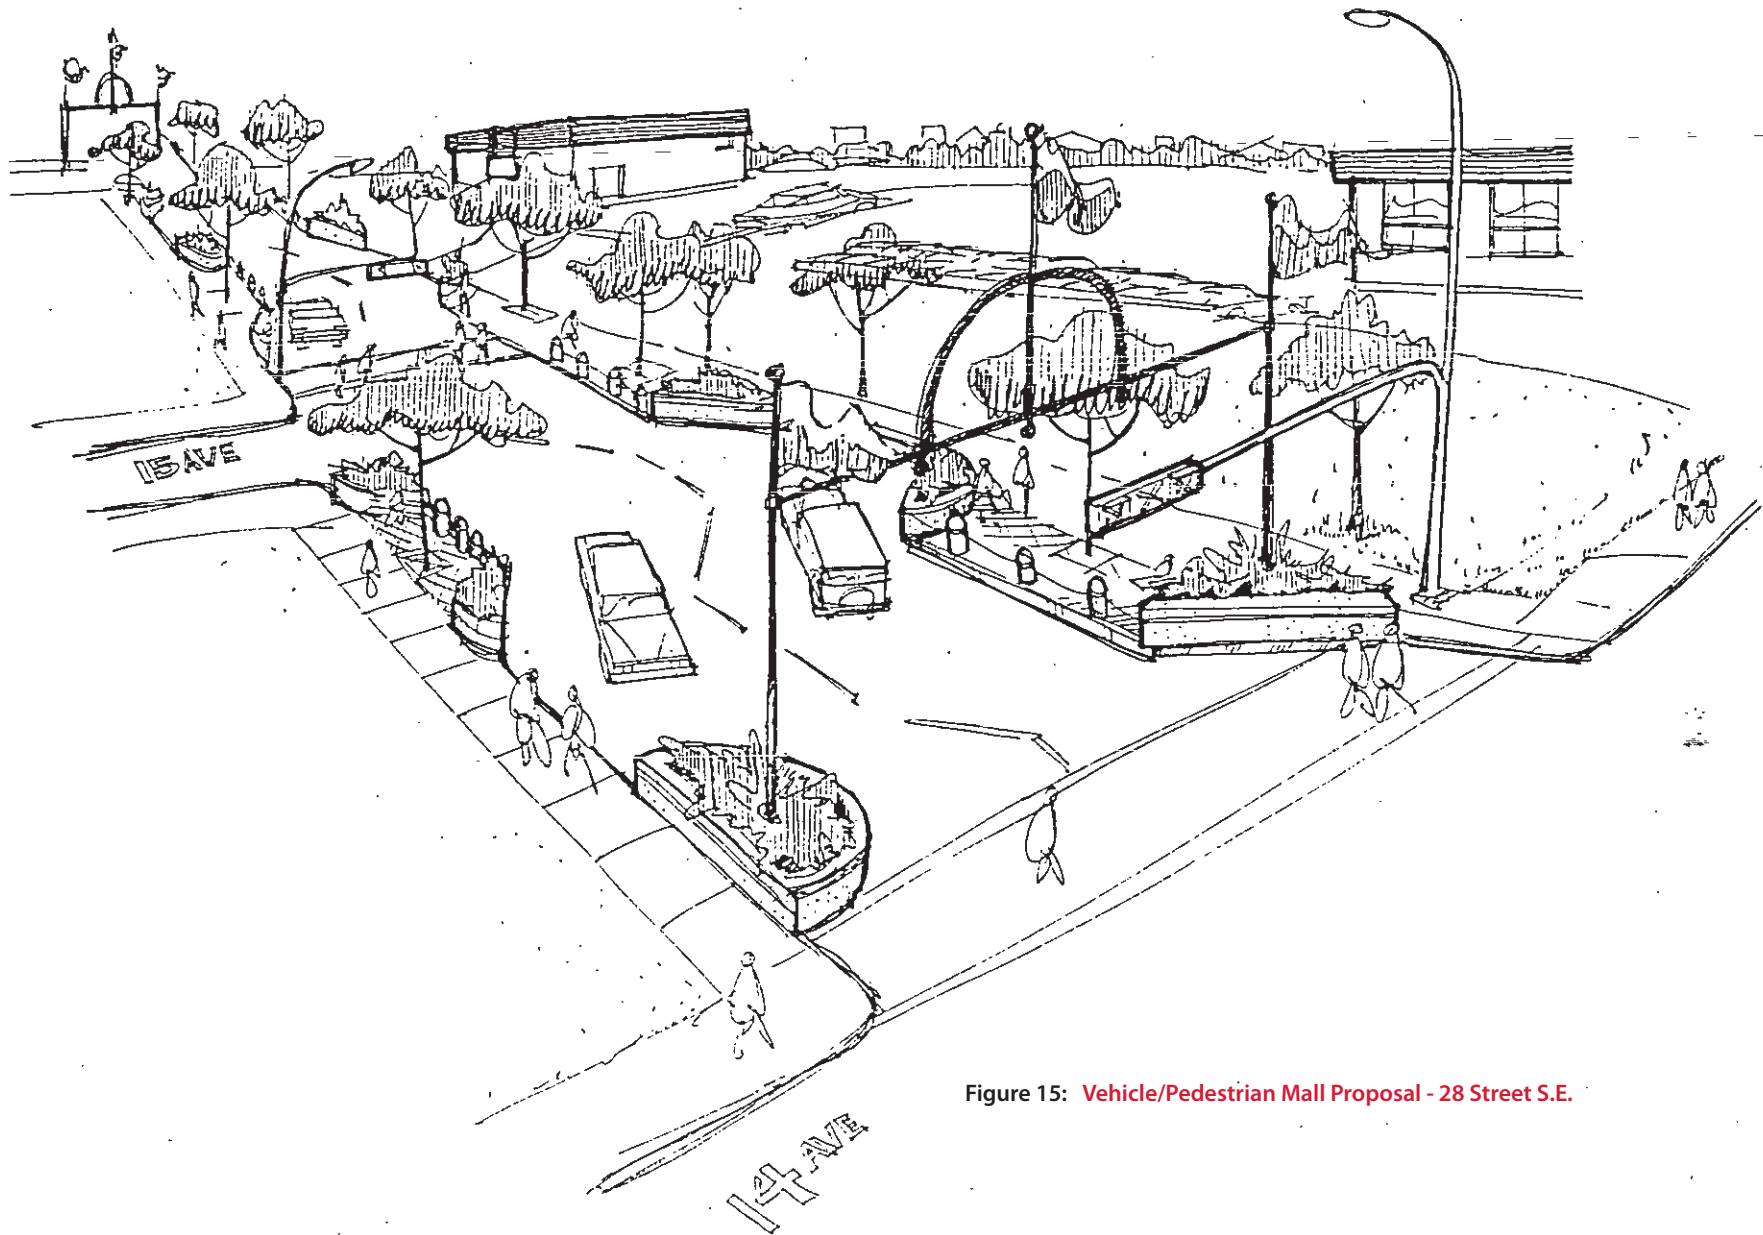

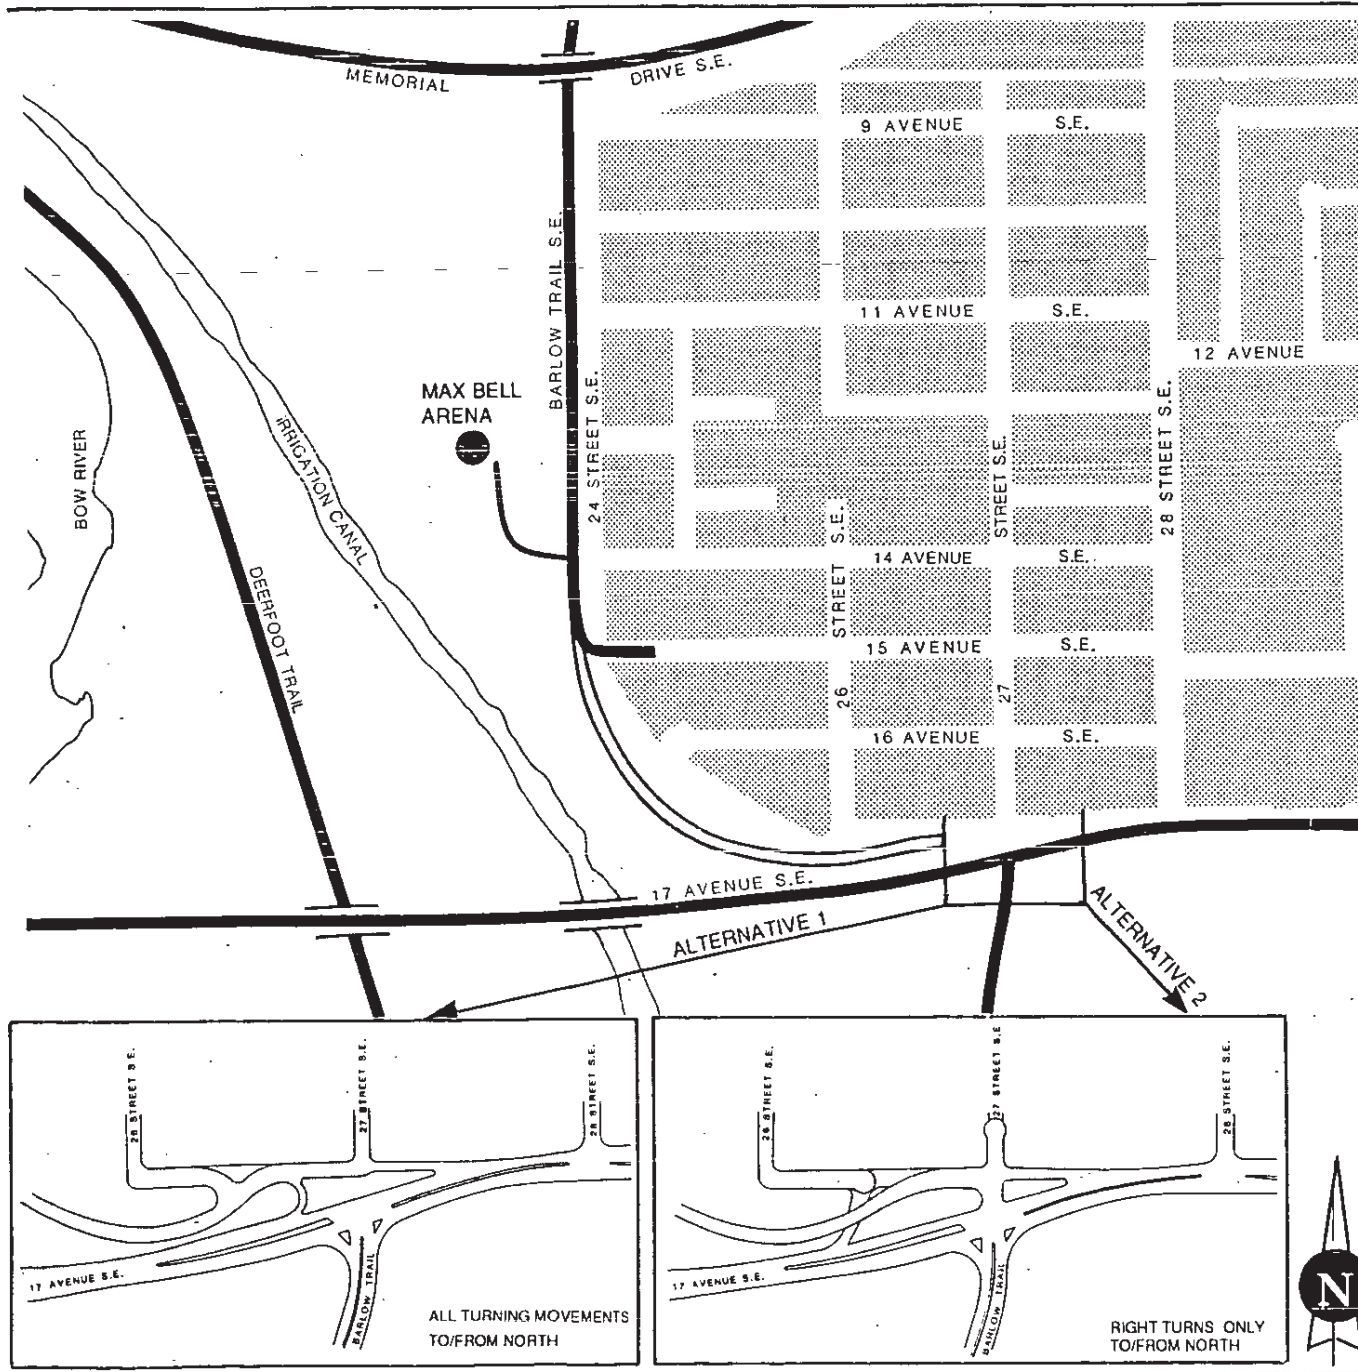

Figure 15: Vehicle/Pedestrian Mall Proposal - 28 Street S.E.

- **Residential parking problems**

The two residential locations identified as having on-street parking problems due to their proximity to the Max Bell Arena and Father Lacombe High School, have been reviewed by the Transportation Department. This review has determined that these areas do not meet the criteria approved by Council for a residential parking zone. The criteria are set out in Section 1.3.4 of this document.

- **Air pollution (Barlow Trail and 10 Avenue S.E.)**

Resolution of resident complaints of air pollution from trucks in the vicinity of this intersection will be addressed through the adjustment of the traffic signal timing. Increasing the green time for traffic exiting Memorial Drive to access Barlow Trail north could solve this concern. If this method is not effective, other means will be explored.

2.5 Community Identification Program

During the preparation of this community plan, the Community Planning Advisory Committee (C.P.A.C.) addressed the need for physical improvements to the community. As a consequence of this review, this committee is recommending a series of community improvements that would parallel the improvements initiated and paid for by the Administration but the costs of construction and maintenance would be the responsibility of community residents.

Proposed improvements include entrance signs, street signs, a cairn to honor the immigrant pioneers of the community, special bus shelters, benches and garbage receptacles placed throughout the community and a bandstand for music festivals as shown in Figure 16.

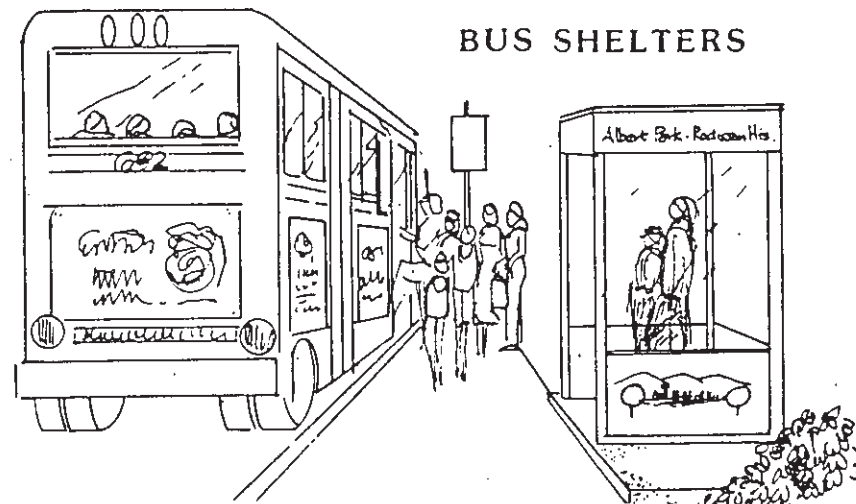

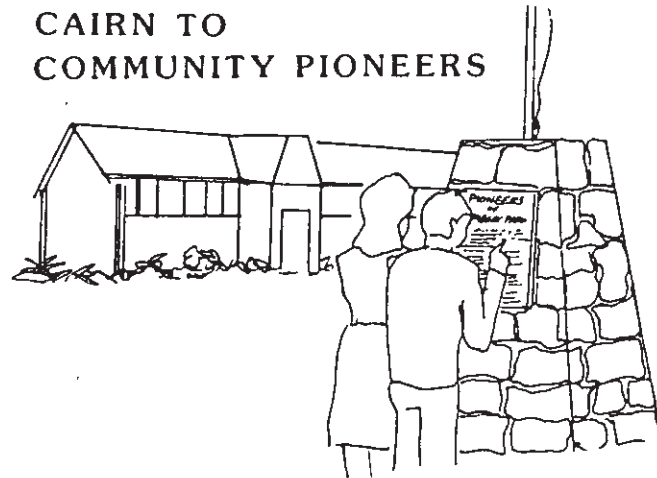

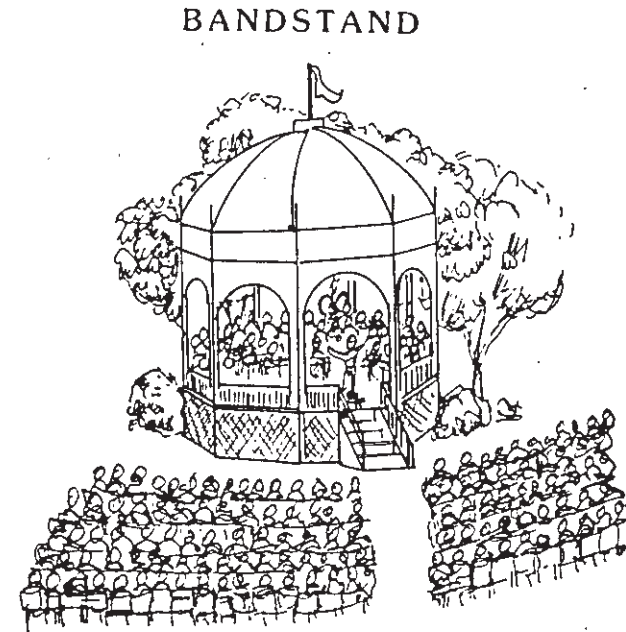

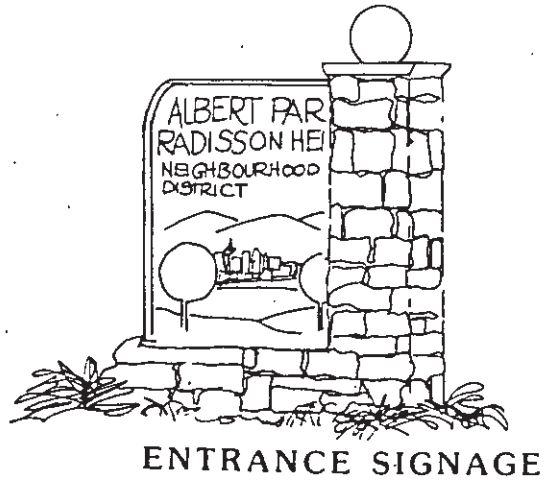

Final approval of this concept will be accomplished through public meetings both before and after the Plan is approved.

The costs of implementing this program are still to be determined. Potential sources of funds to finance these improvements are:

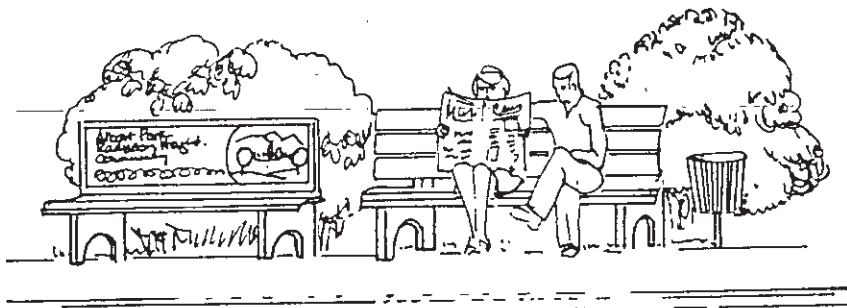

- a special local improvement/local benefit levy (tax) approved by a majority of property owners;
- monies from grants, or from foundations that are generally allocated to community improvements of this type.

(Note: The Transportation Department is concerned regarding the potential difficulties in maintaining specially-designed transit shelters. This proposal could result in increased maintenance costs due to the necessity of providing an inventory of non-standard shelter components.)

3.0 Planning Process

The Albert Park/Radisson Heights A.R.P. was prepared with consideration given to the overall interests of the City and the particular concerns of the community.

Community issues and concerns described in the previous section were compiled from the public participation process. This process included two Open Houses, the Community Planning Advisory Committee (C.P.A.C.), that met approximately once a month during the preparation of this plan, many block meetings and discussions with the Board of Directors of the Community Association.

A special Information Centre and Opinion Survey was conducted in May-June, 1987 regarding solutions to the shortcutting traffic problems. The results of this survey were very helpful in developing the proposed transportation policies. A copy of the opinion survey is included as Appendix A and the survey results are included as Appendix B.

4.0 Financial Considerations

Outlined below is the estimated expenditures required to implement the policies outlined in this Area Redevelopment Plan. These preliminary costs are in 1988 dollars. The transportation, park and social service projects identified in Sections 4.1, 4.2 and 4.3 will be evaluated in the context of city-wide needs and implemented as civic budget constraints permit.

4.1 Proposed Transportation Expenditures

4.1.1	Lane Reduction Proposal (Barlow Trail)	
-	Permanent Installation	\$66,000 - 100,000
4.1.2	Road Closure Alternative (Barlow Trail)	
-	Permanent Installation	\$190,000
4.1.3	36 Street Upgrading	
-	Interim Upgrading (Re-alignment of the intersection at 36 Street and 8 Avenue S.E. and the elimination of parking during peak hours)	\$28,000
-	Ultimate Upgrading	
	Land Acquisition	2.0 Million
	Road Construction	<u>4.5 Million</u>
	TOTAL	6.5 Million

4.1.4	Lane Reduction Proposal (28 Street)	
-	Permanent Fixture	\$66,000 - 100,000
4.1.5	Mixed Vehicle/Pedestrian Mall (28 Street)	
-	Temporary Fixture Costs	\$39,000

4.2 Proposed Park Expenditures

4.2.1	Radcliffe Village Park	\$100,000
4.2.2	Stage 1	
	Passive recreation area improvements to Albert Park park, Community Hall park, Father Lacombe High School park and David D. Oughton park.	
-	install mini-parks (4X \$36,000)	\$144,000
4.2.3	Stage 2	
	Park Improvements (tree planting, landscaping and irrigation systems).	
-	Albert Park park	\$ 40,000
-	Community Hall Site	\$ 82,000
-	Father Lacombe	\$110,000
-	David D. Oughton	\$ 22,000

4.3 Social Services Expenditures

\$50,000 - 70,000 per year for
three years

\$150,000 - 210,000

4.4 Community Identification Program Expenditures

The projects outlined below will be paid for and maintained by the Community Association through a local benefit by-law or private fund raising endeavours.

4.4.1 Community Identification Signs

1 large sign - 5' x 5' \$2,100.00

12 small signs - 3' x 5'
(12 x \$115.00) \$1,380.00

4.4.2 Historic Street Signs

90 x \$115.00 \$10,350.00

4.4.3 Garbage Receptacles

(12 x \$165.00) \$1,980.00

4.4.4 Benches

(6 x \$193.00) \$1,160.00

4.4.5 Bus Shelters

(4 x \$3,300.00) \$13,200.00

4.4.6 Cairn (in honour of pioneers)

\$4,600.00

4.4.7 Bandstand

\$16,500.00

TOTAL (items 4.4.1 to 4.4.7)

\$51,270.00

5.0 Community Point of View

The Community Planning Advisory Committee (C.P.A.C.), on behalf of the Albert Park/Radisson Heights Community, wishes to express its sincere appreciation to the staff members of the various City Departments who have worked to prepare the Area Redevelopment Plan. The C.P.A.C. endorses all of the parts of the plan with the exception of the policies regarding Barlow Trail. Further, C.P.A.C. welcomes the opportunity to put forward its point of view on this major issue.

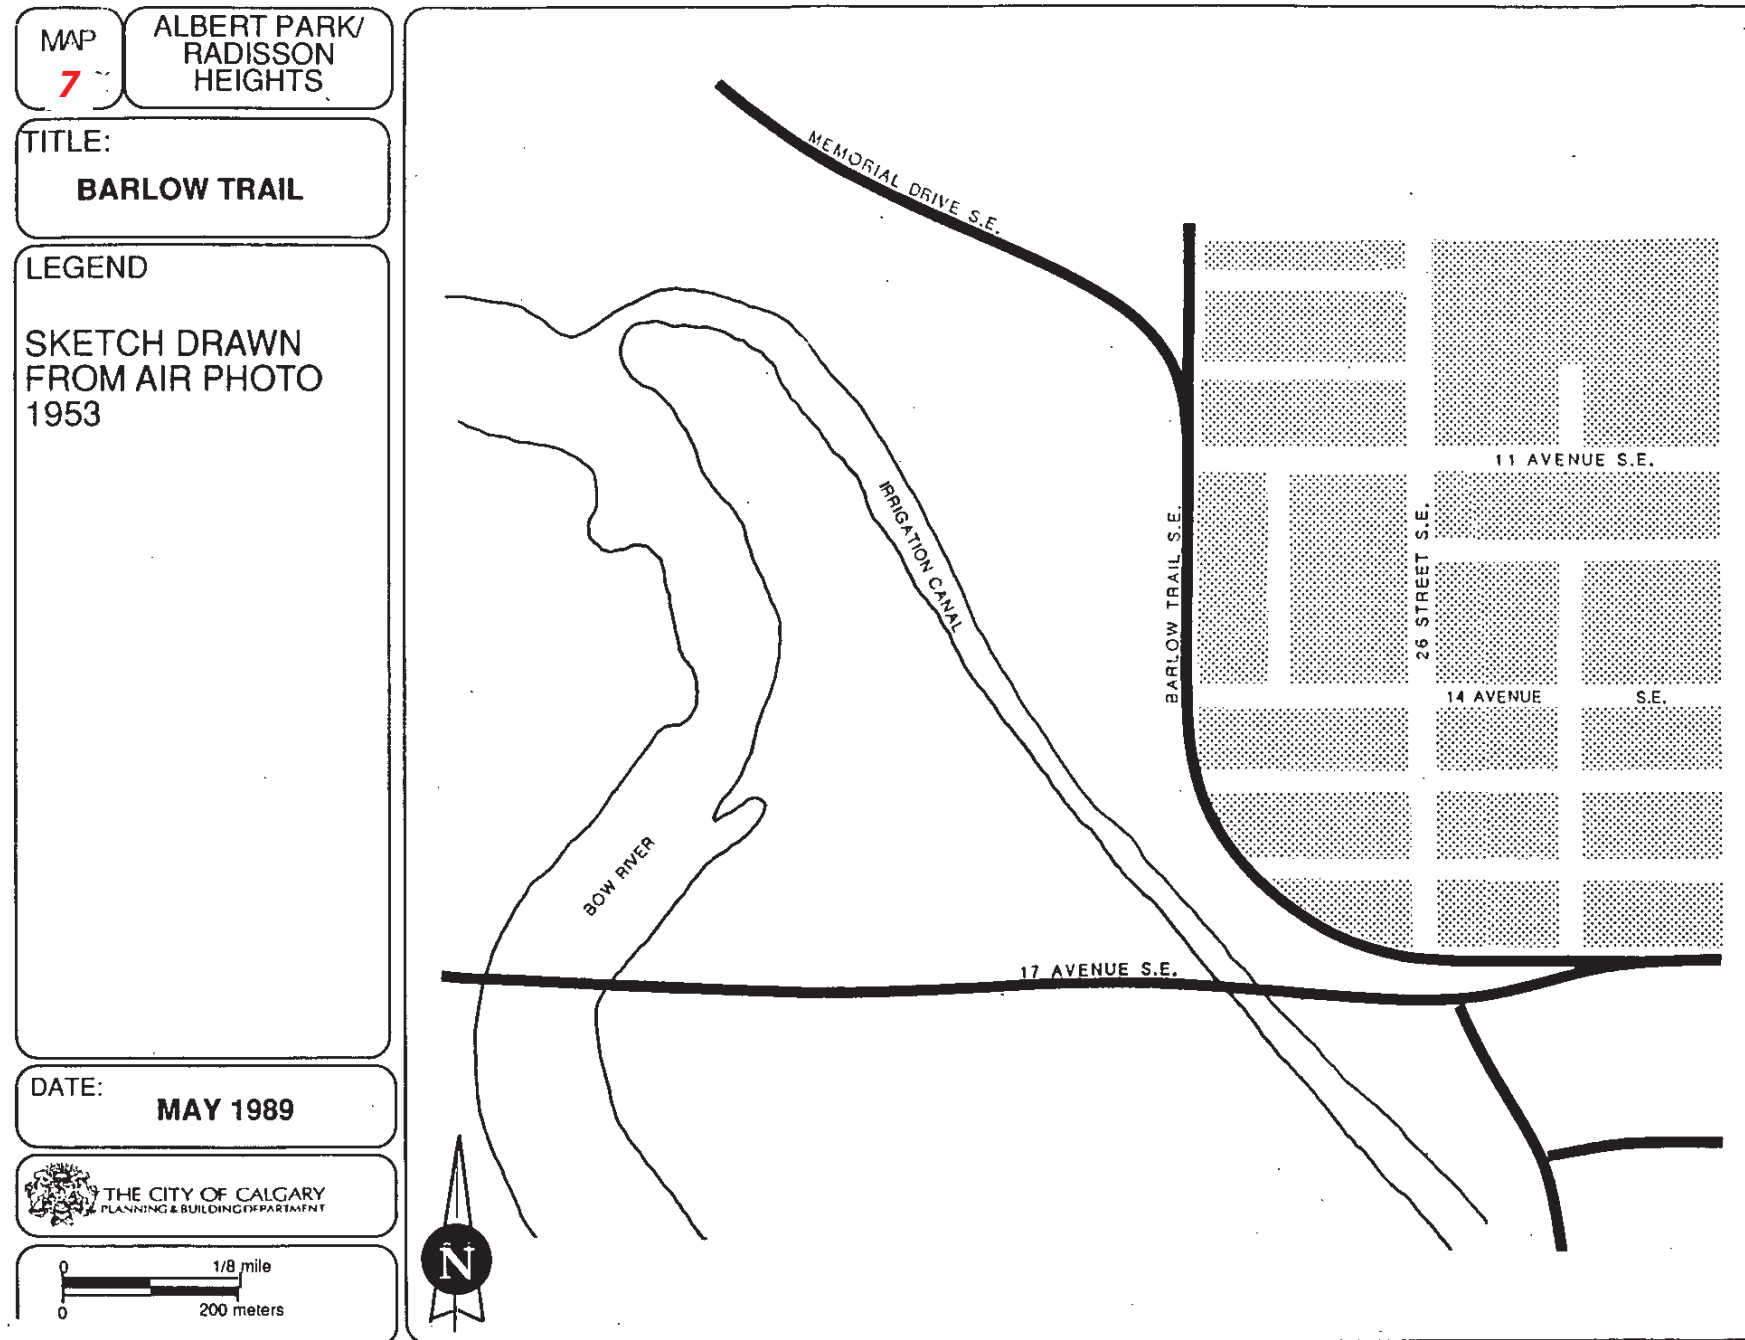

Maps 7, 8, 9 and 10 (sketches drawn from air photos) are enclosed to document and illustrate the point that a road connecting 17 Avenue S.E. and Barlow Trail (south of Memorial Drive) has existed for many, many years. Maps 8 and 9 show a road on the edge of the escarpment as early as 1953. Map 10 (dated 1972) shows this road in existence even with a four lane divided road connecting Barlow Trail and 17 Avenue S.E./Blackfoot Trail. This four lane divided road was discontinued with the construction of Deerfoot Trail S.E. In addition, the road connecting Barlow Trail and 17 Avenue was removed as well. Map 11 (dated 1986) explains that with the elimination of both roads, traffic has nowhere to go but through the community to 15 Avenue and 28 Street. This problem is made worse by the proposed construction on the Interplex site which is directly north of the community on the east side of Barlow Trail.

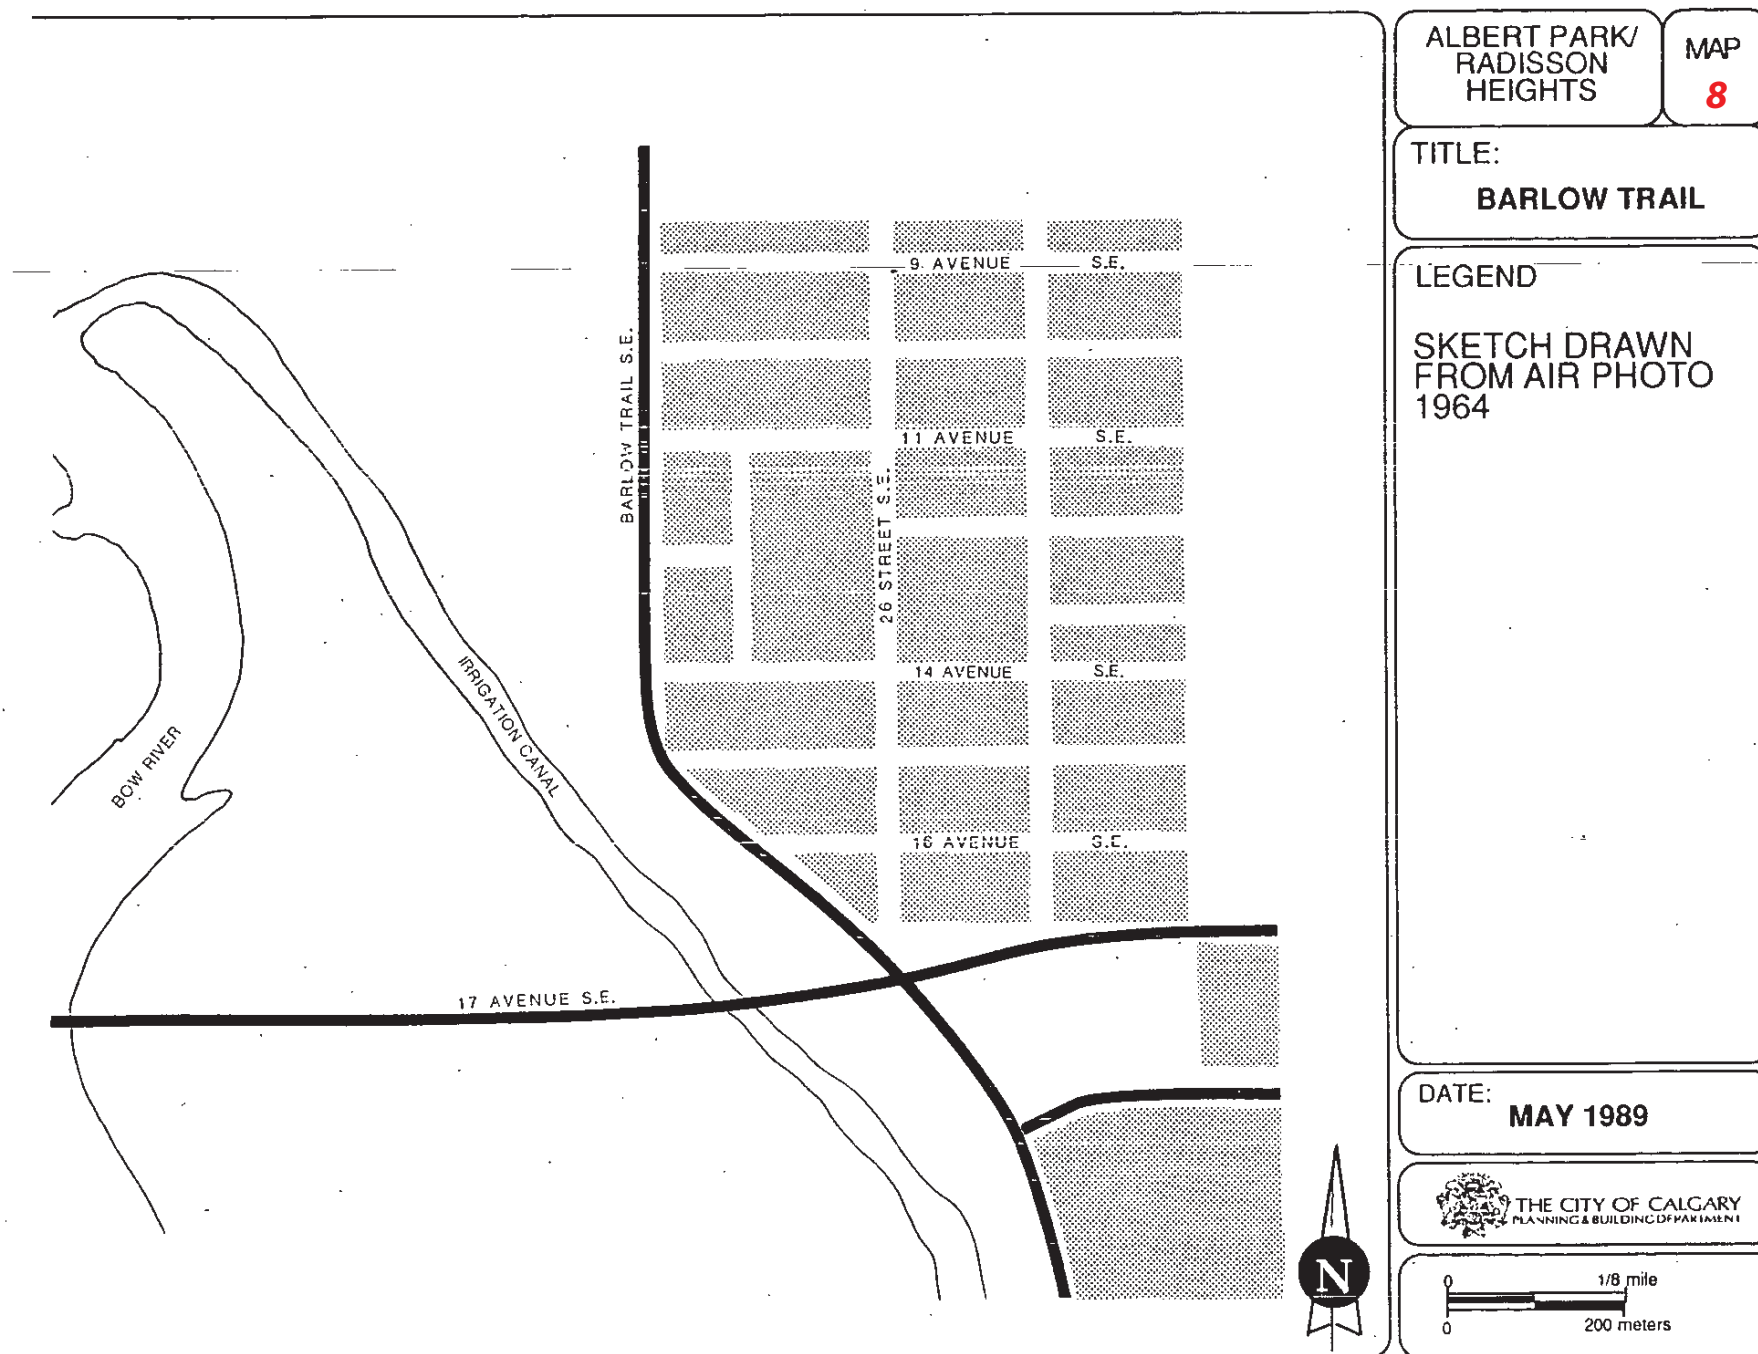

The solution proposed by the Transportation Department is the upgrading of roads on the edge of the community (36 Street and Barlow Trail). The community supports these proposals which would reduce the need of non-local traffic using community streets and avenues when travelling to destinations outside the community. This would also eliminate the need for traffic barriers on local streets to reduce shortcutting traffic.

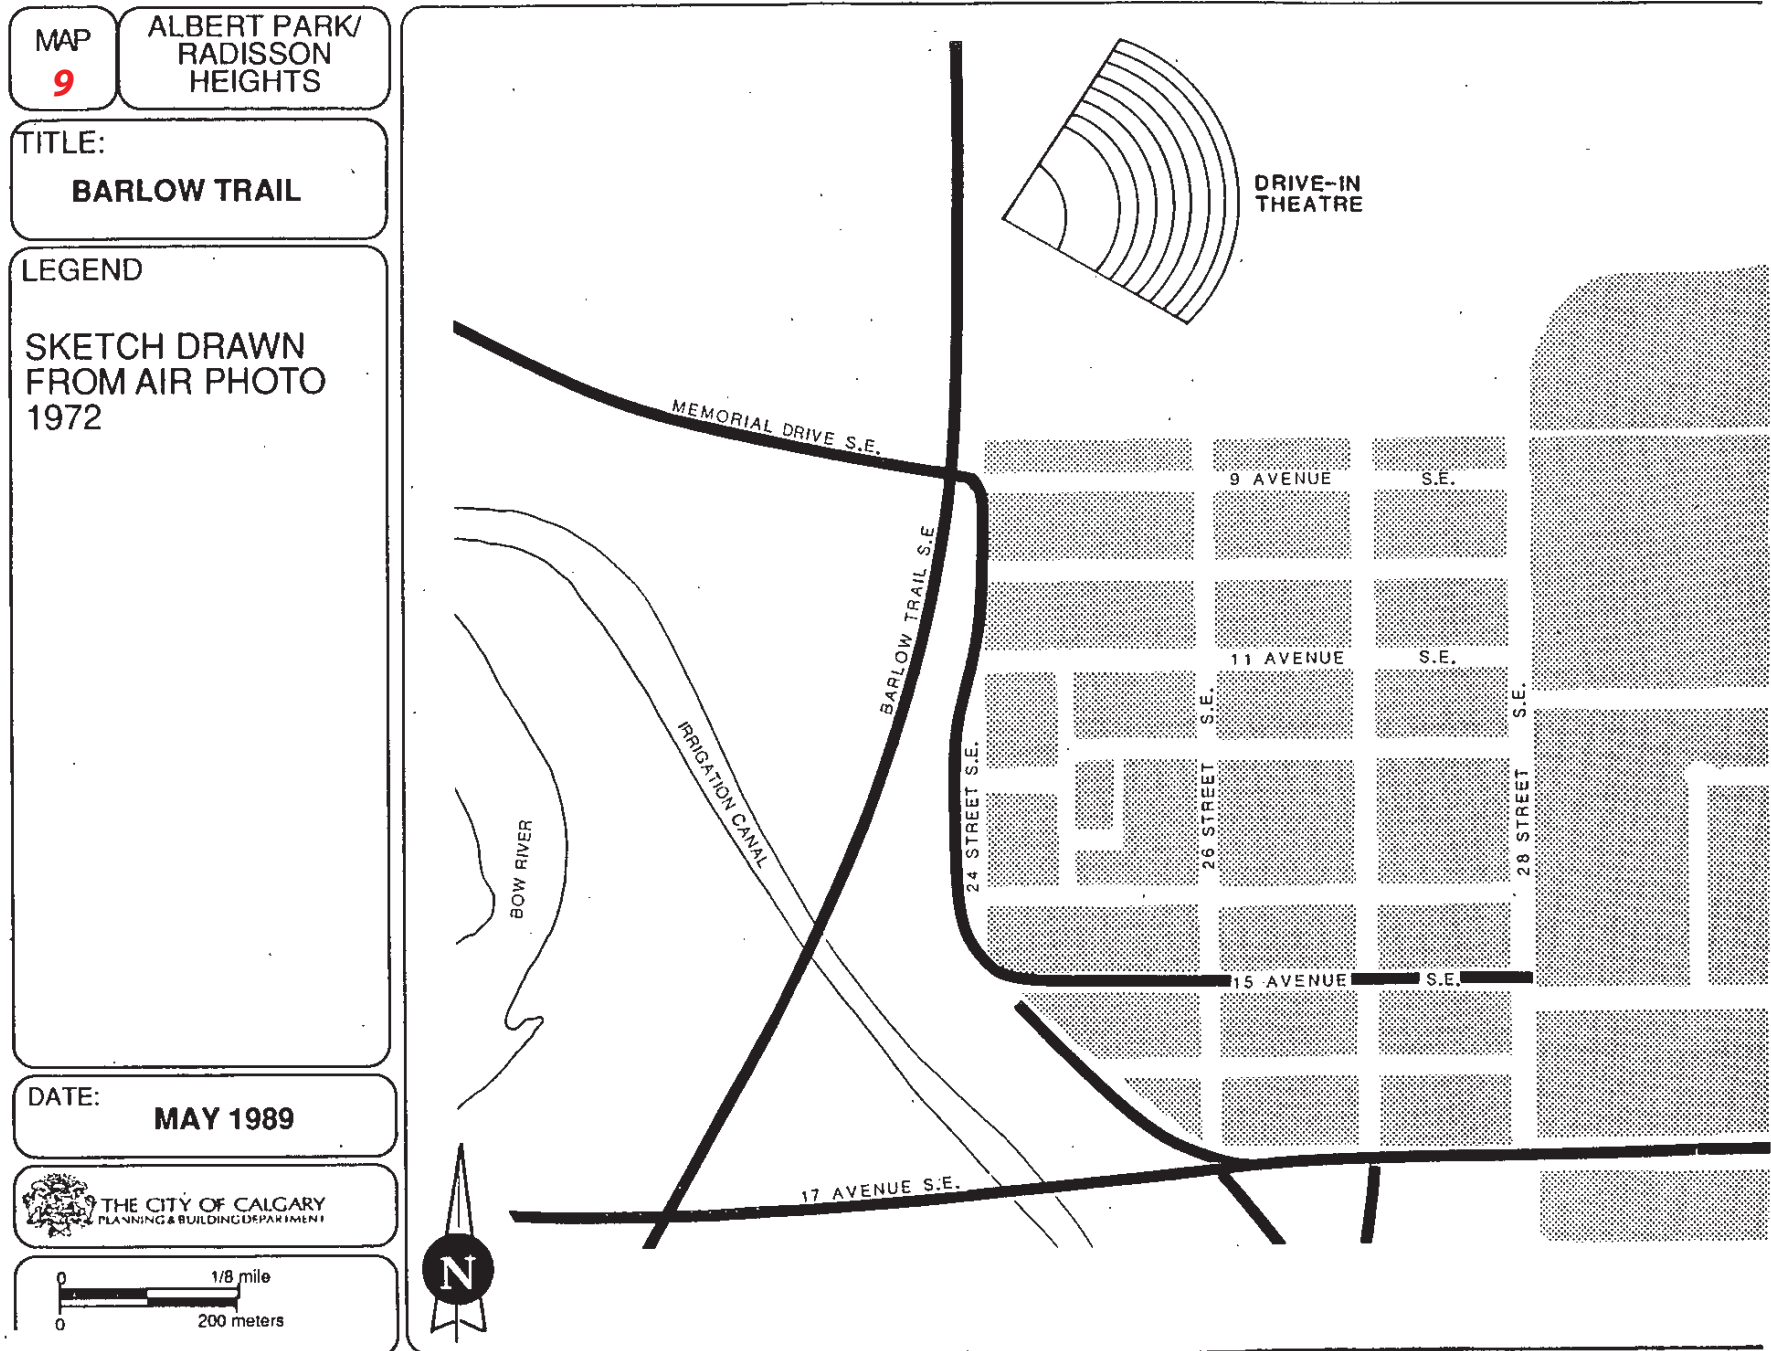

Our fear is that the proposed short term measures (barriers) will become long term solutions without the development of the Barlow Trail/17 Avenue connection.

In conclusion, we think the Barlow Trail/17 Avenue connection is desirable for the following reasons:

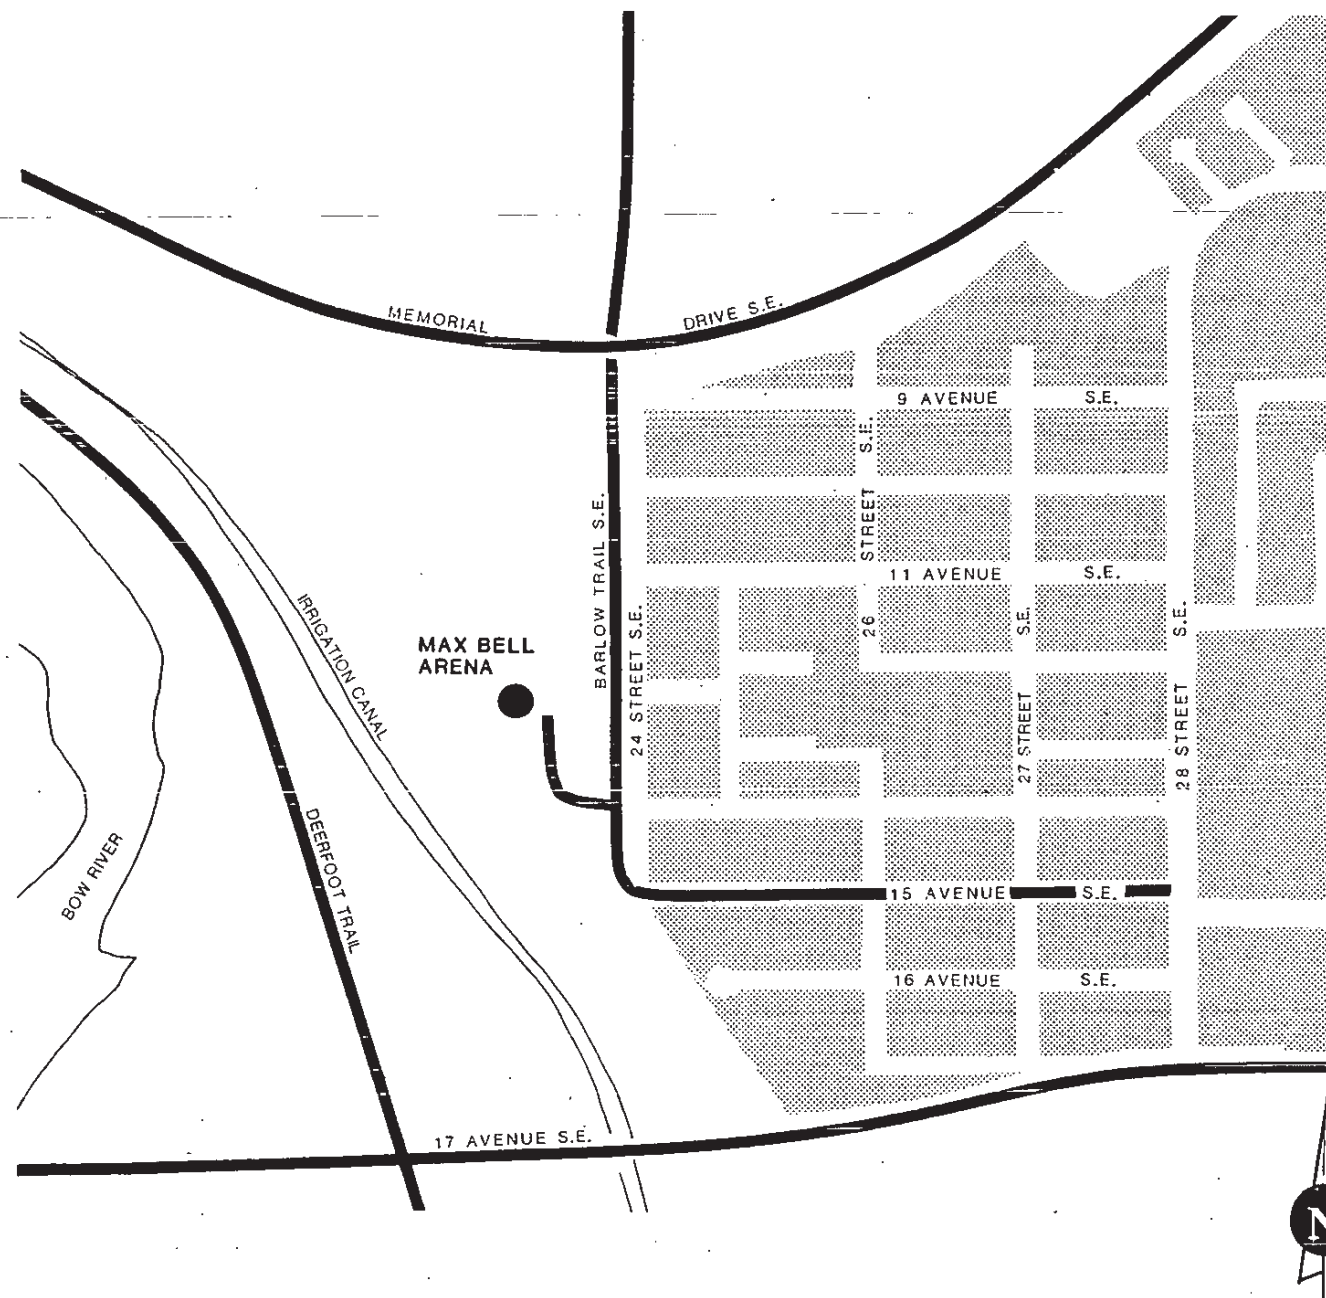

1. the upgrading of roads on the edge of the community is preferred to the use of traffic barriers on community streets;
2. the road right-of-way exists so that no land acquisition costs are necessary to build this road;
3. the development of this road would be much cheaper than making improvements to Deerfoot Trail;
4. the development of this road would have less impact on the Bow River and W.I.D. Canal and adjoining parks than would improvements to Deerfoot Trail.

6.0 Appendix

APPENDIX A OPINION SURVEY ON TRANSPORTATION ALTERNATIVES

1. Do you support the City of Calgary Transportation Department implementing on a trial basis, some form of traffic control scheme in Albert Park/Radisson Heights to reduce non-local traffic shortcutting through the community?

___ Yes ___ No

2. If your answer to question 1 above is yes, please indicate which of the traffic control options described on the previous pages you would support either on an experimental or permanent basis.

ARTERIAL STREET IMPROVEMENTS

		Please check (x) Yes or No	
*Option 1:	Adjust traffic signal timing on 36 Street E. and 17 Avenue S.	<input type="checkbox"/>	<input type="checkbox"/>
Option 2:	Upgrade 36 Street E. between 8 Avenue and 17 Avenue S.E.	<input type="checkbox"/>	<input type="checkbox"/>
	a) a roadway widening to 4 lanes with median	<input type="checkbox"/>	<input type="checkbox"/>
	*b) peak period parking restrictions	<input type="checkbox"/>	<input type="checkbox"/>
Option 3:	Extend Barlow Trail to connect to 17 Avenue/Blackfoot Trail	<input type="checkbox"/>	<input type="checkbox"/>

INTERNAL ROAD MODIFICATIONS

		Please check (x) Yes or No	
*Option 4:	Lane Reduction Scheme: Barlow Trail	<input type="checkbox"/>	<input type="checkbox"/>
*Option 5:	Road Closure - Barlow Trail	<input type="checkbox"/>	<input type="checkbox"/>
*Option 6:	Lane Reduction Scheme - 28 Street E.	<input type="checkbox"/>	<input type="checkbox"/>
*Option 7:	Mixed Vehicle/Pedestrian Mall - 28 Street E.	<input type="checkbox"/>	<input type="checkbox"/>

*Option capable of being implemented on a 6 month trial basis.

Comments or other traffic management systems you would like investigated.

Only 1 response per business or household please.

APPENDIX B OPINION SURVEY RESULTS

These are the results of the Opinion Survey carried out in conjunction with the Information Centre on June 26 and 27. A total of 144 questionnaires were completed and returned to City Hall.

The survey results carry more weight because they represent household or family opinions as opposed to individual opinions. There were twenty-seven (27) completed by businesses in the Forest Lane Shopping Centre that held the same answers and have been so identified. All percentages have been rounded to the next number.

1. Are you in support of implementing on a trial basis some form of traffic control scheme to reduce non-local traffic shortcutting through the community?

Yes 108 75% No answer 24 17% No 12 8%

2. Would you support either on an experimental or a permanent basis the adjusting of traffic signs timing on 36 Street E. and on 17 Avenue E.?

Yes 88 61% No answer 36 25% No 20 14%

3. Would you support upgrading 36 Street E. between 8 Avenue and 17 Avenue S.E. to four lanes with a median?

Yes 64(27) 44% No answer 43 20% No 27 36%

4. Would you support on an experimental or a permanent basis parking restrictions on 36 Street E. between 8 and 17 Avenues between 7-9 a.m. and 4-6 p.m.?

Yes 81(27) 56% No answer 47 33% No 16 11%

5. Would you support extending Barlow Trail to 17 Avenue/Blackfoot Trail?

Yes 80(27) 55% No answer 53 30% No 21 14%

6. Would you support either on an experimental or a permanent basis a lane reduction scheme on Barlow Trail?

Yes 19 13% No answer 47 33% No 78(27) 54%

7. Would support either on an experimental or a permanent basis a road closure at the corner of 15 Avenue and Barlow Trail?

Yes 29 20% No answer 32 22% No 83(27) 57%

8. Would you support either on an experimental or a permanent basis a lane reduction scheme on 28 Street?

Yes 21 15% No answer 49 34% No 74(27) 51%

9. Would you support either on an experimental or a permanent basis a mixed vehicle/pedestrian mall on 28 Street?

Yes 20 14% No answer 52 36% No 72(27) 50%

APPENDIX C

OPEN SPACE RESPONSES - NEEDS AND PREFERENCE STUDY

1. Satisfaction with the PARKS/OPEN SPACE in the Community:

Amount of Parks/Playfields

Very Satisfied	2%	(7)
Unsatisfied	21%	(69)
Satisfied	51%	(165)
Very Unsatisfied	2%	(40)

Maintenance

Very Satisfied	2%	(7)
Unsatisfied	23%	(73)
Satisfied	50.5%	(162)
Very Unsatisfied	10%	(32)

Equipment Appropriate

Very Satisfied	2.5%	(8)
Unsatisfied	14%	(46)
Satisfied	54%	(172)
Very Unsatisfied	10.6%	(34)

2. When asked what improvements should be emphasized in PARKS/OPEN SPACE, respondents felt that quiet passive areas for relaxing picnicking and trees, shrubs and plantings needed more emphasis (78% and 71% respectively).

		More Emphasis		Adequate	
1.	Quiet passive areas for relaxing/picnicking	78%	(242)	11%	(35)
2.	Trees, shrubs & plantings	71%	(228)	21%	(67)
3.	Tennis and court games	58%	(185)	20%	(64)
4.	Joggig track/fitness	54%	(174)	24%	(77)
5.	Playground equipment	50%	(161)	25%	(80)
6.	Pathways	45%	(145)	30%	(96)
7.	Natural ice rinks	34%	(108)	48%	(154)
8.	Sports fields	26%	(82)	50%	(160)
